Child/Adolescent Psychiatry**	69.4	38.1	31.3	31.3	45%

Where are people currently receiving care?

- Traditional outpatient
 - Private practices
 - Medical center-affiliated clinics (e.g., QCS, HPH, Kaiser, military-affiliated, etc.)
- Intermediate levels of care
 - Publically funded programs for intensive case management, community programs
 - Often need to meet DOH referral criteria
 - <https://health.hawaii.gov/camhd/how-to-apply/>
 - <https://health.hawaii.gov/amhd/provider/forms/>

Where are people currently receiving care?

- In need of acute inpatient psychiatric care
 - The Queen's Medical Center (children/adolescents and adults)
 - Kāhi Mōhala (children/adolescents)
 - Castle Medical Center (adults)
 - Tripler Army Medical Center (military-affiliated adults)
 - Neighbor Islands (all adult):
 - Samuel Mahelona Memorial Hospital (Kaua'i),
 - Maui Memorial Medical Center (Maui),
 - Kona Community Hospital and Hilo Medical Center (Big Island)
- Emergencies in the community
 - Crisis hotline 988
 - Emergency rooms (hospitals above except Kāhi Mōhala have emergency rooms)

Case Study

High-Performing Health Care Organization • March 2010

The Massachusetts Child Psychiatry Access Project: Supporting Mental Health Treatment in Primary Care

WENDY HOLT
DMA HEALTH STRATEGIES

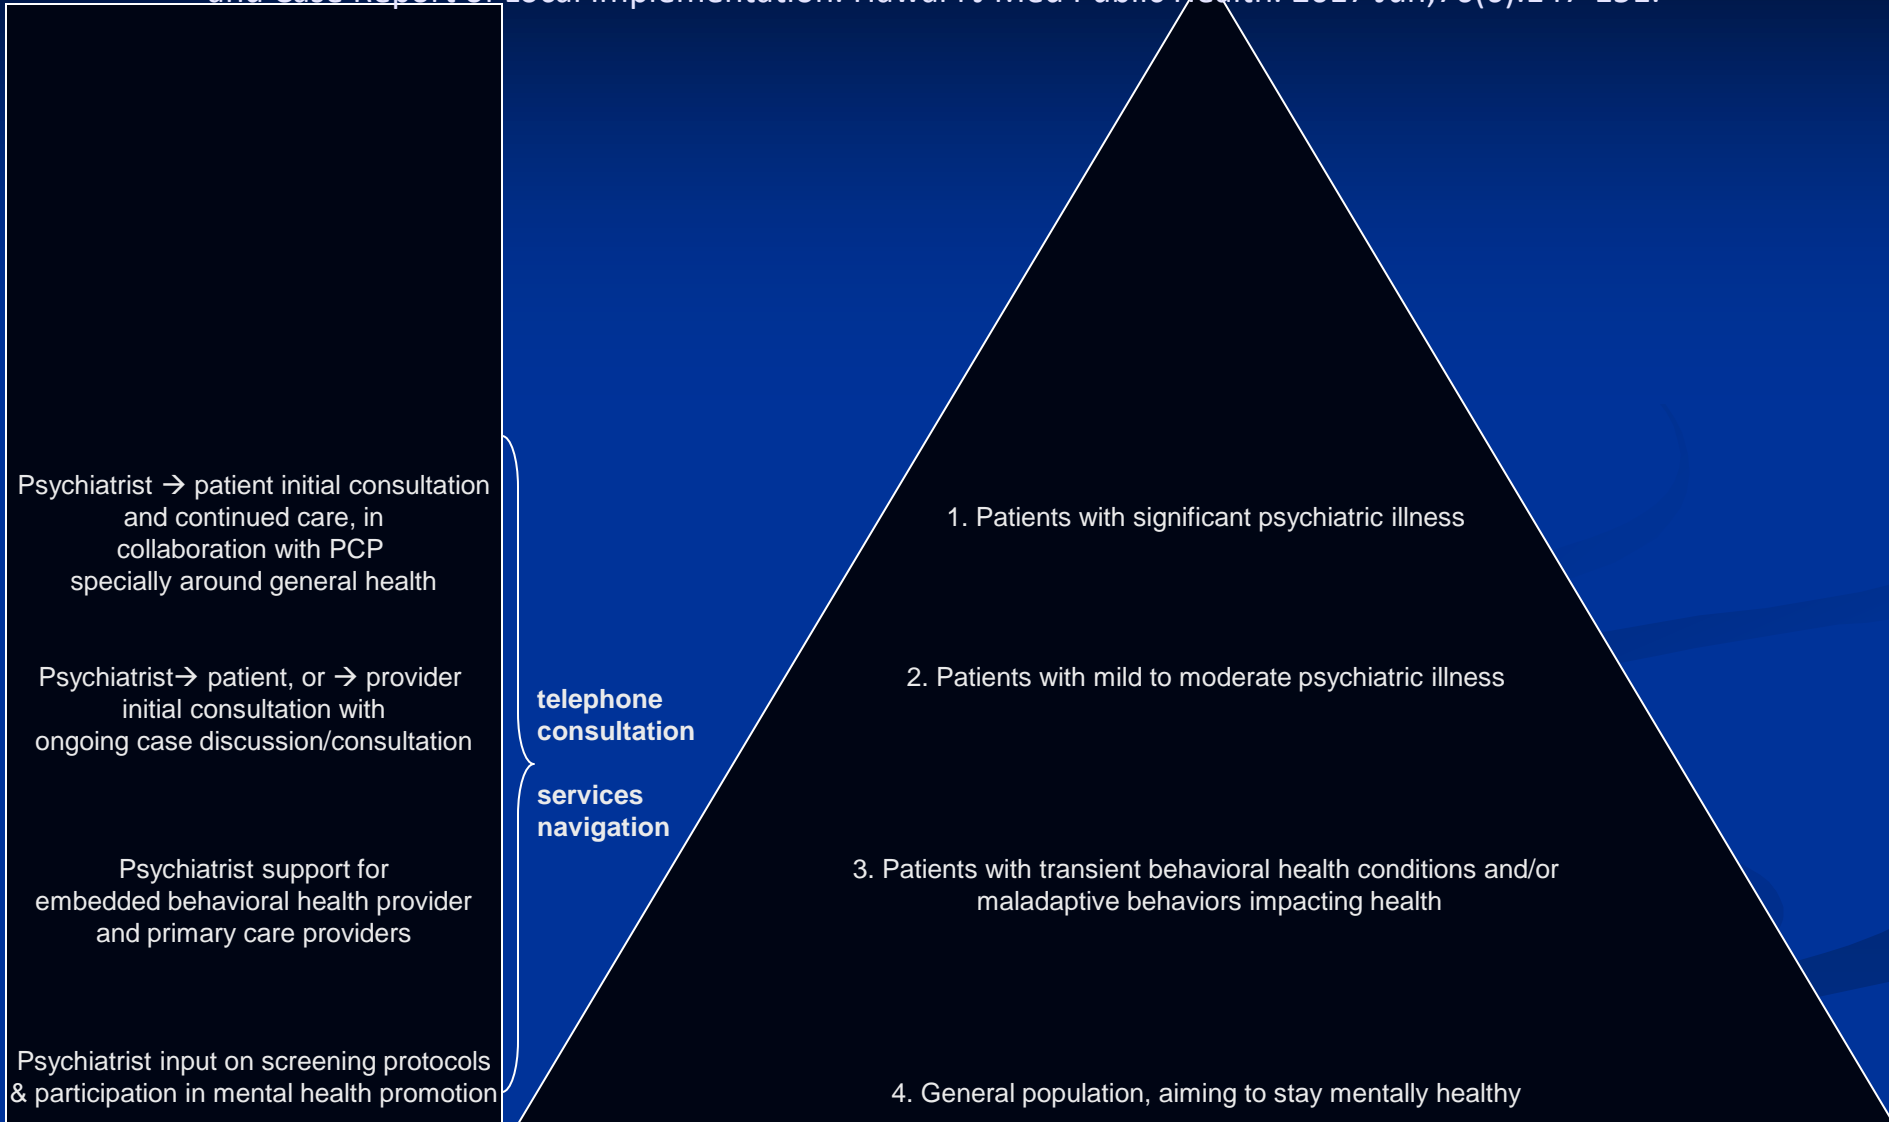

The mission of The Commonwealth Fund is to promote a high performance health care system. The Fund carries out this mandate by supporting independent research on health care issues and making grants to improve health care practice and policy. Support for this research was provided by The Commonwealth Fund. The views presented here are those of the authors and not necessarily those of The Commonwealth Fund or its directors, officers, or staff.

ABSTRACT:

Massachusetts has successfully demonstrated the Massachusetts Child Psychiatry Access Project (MCPAP), a program that provides timely telephonic psychiatric and clinical guidance to primary care providers (PCPs) treating children with mental health problems. The program allows enrolled PCPs to get assistance for any child in their care. On the basis of an initial phone consultation, MCPAP may provide an in-person psychiatric or clinical assessment, transitional therapy, and/or facilitated linkage to community resources. Six regional teams based in academic medical centers reach out to and support enrolled PCPs in their catchment area. The program has enrolled most primary care practices, representing an estimated 95 percent of all youth in the state, and has high rates of PCP participation. PCPs report higher ratings of their ability to serve children with mental health problems as a result of the program.

Services to match population groups
