

SENATE FLOOR AMENDMENT

FLOOR AMENDMENT NO. 4 Date MAR - 7 2006

TO: S.B. No. 218 S.D. 3

SECTION 1. Senate Bill No. 218 S.D. 3, section 1 is amended as follows:

"SECTION 1. The legislature finds that there is currently a shortage of at least fifty mobile intensive care technicians or paramedics in Hawaii. The Emergency Medical Services Strategic Planning for the Future conference in 2003, estimated that two hundred fifty mobile intensive care technicians will be needed within the next five years to fully staff the system. This estimate includes current shortages, attrition, and anticipated system growth (e.g., the federal firefighting agency had six mobile intensive care technicians and anticipated needing twenty-nine before the end of 2007).

The lack of local training has made the shortage even more critical, especially on the neighbor islands. Emergency medical technicians leave the industry because they are unable to advance without financial assistance. Others take correspondence classes in nursing or other related health care fields. For example, Maui currently ~~[there are]~~ has at least ten ~~[students]~~ emergency medical technicians who wish to enter the next mobile intensive care technician training program being offered ~~[on Maui, which will possibly be scheduled in early 2007]~~. In order to complete this program and be certified, these students must attend and successfully complete both the didactic and practical training clinics. The didactic training is proposed to be held in Maui in 2007. However, the mandatory practical training is only offered on Oahu. Traveling to Oahu is an enormous expense for these students who must take time off from work and from their families to attend the training. Without financial assistance of some type, it is unlikely that many of them will be able to attend.

The prime recruiting grounds for the federal firefighting agency is the city and county of Honolulu mobile intensive care technician workforce, which is already critically short-staffed. All providers look increasingly to paramedics who have trained on the mainland to staff Hawaii's ambulances. These mainland recruits are rarely employed beyond two years in the Hawaii system before returning to the mainland.

It is widely recognized that the moneys distributed for mobile intensive care technician workforce development are not equitable. Unless the State can provide financial stipends to

non-civil service employees who train in an accredited program, the crisis will quickly get worse.

The purpose of this Act is to appropriate funds to the department of health to establish a training stipend program for emergency medical technicians who do not have access to a training stipend program and who want to advance in their chosen profession by enrolling in a state-qualified mobile intensive care technician training program."

SECTION 2. Senate Bill. No. 218 S.D. 3, section 2, is amended as follows:

"SECTION 2. There is appropriated out of the general revenues of the State of Hawaii the sum of \$ _____, or so much thereof as may be necessary for fiscal year 2006-2007, to establish the emergency medical technician training stipend program to remedy the shortage of mobile intensive care technicians/paramedics in Hawaii and to assist, through a state-qualified mobile intensive care technician program, ten students per year who are public or private paramedics and currently do not have access to a training stipend program[~~provided that no funds shall be expended for trainee stipends unless the county matches the funds expended on a trainee who is a resident of that respective county on a dollar-for-dollar basis~~]."

A BILL FOR AN ACT

RELATING TO HEALTH.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF HAWAII:

1 SECTION 1. The legislature finds that there is currently a
2 shortage of at least fifty mobile intensive care technicians or
3 paramedics in Hawaii. The Emergency Medical Services Strategic
4 Planning for the Future conference in 2003, estimated that two
5 hundred fifty mobile intensive care technicians will be needed
6 within the next five years to fully staff the system. This
7 estimate includes current shortages, attrition, and anticipated
8 system growth (e.g., the federal firefighting agency had six
9 mobile intensive care technicians and anticipated needing
10 twenty-nine before the end of 2007).

11 The lack of local training has made the shortage even more
12 critical, especially on the neighbor islands. Emergency medical
13 technicians leave the industry because they are unable to
14 advance without financial assistance. Others take
15 correspondence classes in nursing or other related health care
16 fields. For example, Maui currently has at least ten emergency
17 medical technicians who wish to enter the next mobile intensive
18 care technician training program being offered. In order to

1 complete this program and be certified, these students must
2 attend and successfully complete both the didactic and practical
3 training clinics. The didactic training is proposed to be held
4 in Maui in 2007. However, the mandatory practical training is
5 only offered on Oahu. Traveling to Oahu is an enormous expense
6 for these students who must take time off from work and from
7 their families to attend the training. Without financial
8 assistance of some type, it is unlikely that many of them will
9 be able to attend.

10 The prime recruiting grounds for the federal firefighting
11 agency is the city and county of Honolulu mobile intensive care
12 technician workforce, which is already critically short-staffed.
13 All providers look increasingly to paramedics who have trained
14 on the mainland to staff Hawaii's ambulances. These mainland
15 recruits are rarely employed beyond two years in the Hawaii
16 system before returning to the mainland.

17 It is widely recognized that the moneys distributed for
18 mobile intensive care technician workforce development are not
19 equitable. Unless the State can provide financial stipends to
20 non-civil service employees who train in an accredited program,
21 the crisis will quickly get worse.

1 The purpose of this Act is to appropriate funds to the
2 department of health to establish a training stipend program for
3 emergency medical technicians who do not have access to a
4 training stipend program and who want to advance in their chosen
5 profession by enrolling in a state-qualified mobile intensive
6 care technician training program.

7 SECTION 2. There is appropriated out of the general
8 revenues of the State of Hawaii the sum of \$, or so
9 much thereof as may be necessary for fiscal year 2006-2007, to
10 establish the emergency medical technician training stipend
11 program to remedy the shortage of mobile intensive care
12 technicians/paramedics in Hawaii and to assist, through a
13 state-qualified mobile intensive care technician program, ten
14 students per year who are public or private paramedics and
15 currently do not have access to a training stipend program.

16 SECTION 3. The sum appropriated shall be expended by the
17 department of health for the purposes of this Act.

18 SECTION 4. This Act shall take effect on July 1, 2006.

SB218, SD4

Report Title:

Health; MICT; EMT Stipend Program

Description:

Establishes EMT training stipend program to remedy shortage of MICT paramedics and assist 10 students per year who are public or private paramedics and cannot access a program. Appropriates unspecified amount. (SD4)
