7 and wind energy, respectively, could produce electricity to
8 power school facilities, including air conditioning; and

10 WHEREAS, the installation of a net energy metered system
11 would allow the schools to connect and feed any unused
12 electricity produced by the renewable energy systems to the
13 electric grid for the use of the surrounding community; and
14

15 WHEREAS, the renewable energy projects would encourage and
16 promote increased awareness of renewable energy technologies
17 among students, teachers, and the community; and
18

19 WHEREAS, the energy cost savings resulting from the
20 renewable energy systems over the long-term will make up for the
21 initial cost of installation of the systems; and
22

23 WHEREAS, Lahainaluna High School, Lahaina Intermediate
24 School, and Princess Nahienaena Elementary School located on the
25 west side of the island of Maui, receives a substantial amount
26 of sunlight and wind and are ideal locations to implement
