**TESTIMONY**  
**HB366 HD2**  
**LATE**

LATE TESTIMONY

Legislative Testimony  
**HB 366, HD 2, RELATING TO MANTA RAYS**  
Senate Committee on Water, Land, Agriculture, and Hawaiian  
Affairs

March 18, 2009

3:00 p.m.

Room: 229

---

The Office of Hawaiian Affairs (OHA) **SUPPORTS, with amendments**, H.B. 366, H.D. 2, which would amend Chapter 188, Hawaii Revised Statutes and prohibit persons from knowingly capturing or killing manta rays within State marine waters. The current draft would provide an exception for special permits granted for scientific, education, management or propagation purposes.

OHA believes that the intent of this bill is a proactive step toward protecting manta rays ahead of any potential threats posed by commercial fishing, poaching and wanton killing.

OHA's only recommendation is that the bill also be amended to include a provision that would develop an appropriate process to allow for the any identified traditionally and customarily appropriate purposes for contact with manta rays.

Therefore, OHA urges the Committee to PASS H.B. 366, H.D. 2, with the above mentioned recommendation as an amendment. Thank you for the opportunity to testify.

March 18, 2009

WRITTEN TESTIMONY

Dear Committee,

I am a founding board member of Manta Pacific Research foundation whose mission is to study manta rays in their natural habitat, conduct scientific research, provide education programs for the public about manta rays and the marine environment, and to establish and promote global manta ray conservation studying the population biology and habitat use of manta rays in Hawaii. I have a Ph. D. in Molecular Biology and a Bachelor's of Arts from UC. Berkeley in Genetics. I am also a member of the Humpback Whale National Marine Sanctuary Advisory Counsel, the marine mammal stranding response network, the monk seal task force, and Kula Naia Foundation which studies Hawaiian Spinner dolphins.

I strongly support House Bill 366, which would provide protection for manta rays in Hawaii. The written testimony that has been previously submitting on the manta ray residing in Hawaii indicates that the Kona manta ray population is small, with low reproductive rates, and limited migration. This type of life history pattern makes any species highly susceptible to any culling process, which is why other species with small closed population are on the endangered species list. In Hawaii, there are many notable species that are on the endangered species list: humpback whales, monk seals, and sea turtles to name a few. Interestingly enough all these animals on the list have higher population numbers than what we have discovered about manta rays in Hawaii over the last 15 years.

However, I would like to add my objection to the amendment added to HB366 by the House Judiciary Committee. The amendment would not prohibit special activity permits allowed under section 187A-6. This section would allow a collecting permit to be issued "to any person to take aquatic life, possess or use fishing gear, or engage in any feeding, watching, or other such non-consumptive activity related to aquatic resources, otherwise prohibited by law, in any part of the State, for scientific, educational, management, or propagation purposes."

Currently the threat to manta rays in Hawaii is by aquariums who would like to collect manta rays for display. While it has been shown that manta rays can be kept in captivity, it has also been shown that there is a large learning curve and high mortality rate of captive mantas. For example Okinawa Expo Aquarium had 13 manta rays die in captivity. Monterey Bay Aquarium had 4 out of 5 mobula rays (which are closely related to manta

rays) die while in captivity. These large animals need very large enclosures. Additionally manta rays are filter feeders that consume 10% of their body weight in plankton on a daily basis. These types of animals do not survive well in captive situations.

Presently we have identified 158 manta rays off the Kona Coast in 15 years of concerted effort, many of these animals have only been seen once. If we lost even 8 manta rays that would be over 5 % of our total population and a much larger percentage of the more frequently seen animals.

Aquariums provide a unique educational opportunity, but one should carefully consider the cost to the resident population of the species they are displaying. I would like to see the amendment be amended to stipulate that if there is any take of manta rays for scientific or educational purposes to occur in Hawaii, it should only be permitted with the following guidelines:

**No take be allowed until a population assessment is completed for the island upon which the take will occur.** Currently there is limited data on the current population size and the extent if any of inter-island migration of mantas. These are needed to determine if one is able to set a sustainable level for any take of of manta rays in Hawaiian waters.

Thank you for taking the time to hear my testimony.

Victoria Newman

HB 366

# LATE TESTIMONY

From: Janice McLaughlin <janus@somemore.com>  
 Subject: **Petition Count**  
 Date: March 18, 2009 8:45:47 AM HST  
 To: KELLERKONA1@aol.com, Eli Michael <elimichael173@yahoo.com>, Vicky Newman <vicky@opua.org>, Timothy Brian Clark <clark@hawaii.edu>

Here's the petition count as of today (as best as we can figure).

Written: 4868  
 Online: 1103  
 Total: 5971

*we have collected 4868 handwritten signatures in support of Manta protection. Below is a list of an additional 1103 electronically collect signatures in support of manta protect. please accept these names as additional testmonies in suport of Manta Protection in Hawaiian waters.*

*Thank you, Victoria Newman ph  
 Director of Manta  
 Pacific Research  
 Foundation.*
