A BILL FOR AN ACT

RELATING TO THE PACIFIC INTERNATIONAL SPACE CENTER FOR EXPLORATION SYSTEMS AND NATIONAL AERONAUTICS AND SPACE ADMINISTRATION LASER COMMUNICATIONS GROUND STATION INITIATIVE.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF HAWAII:

- 1 SECTION 1. The legislature finds that the Pacific
- 2 international space center for exploration systems stimulates
- 3 economic growth for the State, promoting the establishment and
- 4 growth of new sustainable and green industries, associated jobs.
- 5 workforce development, internships, and science, technology,
- 6 engineering, and mathematics education programs.
- 7 The legislature further finds that the National Aeronautics
- 8 and Space Administration is working to develop advanced
- 9 technologies involving laser optical telecommunications. Since
- 10 the beginning of the space age, the National Aeronautics and
- 11 Space Administration has communicated with their spacecraft
- 12 through the use of radio frequency ground antennas. However,
- 13 the ever increasing data rate requirements from more
- 14 sophisticated instruments on spacecraft will soon surpass the
- 15 National Aeronautics and Space Administration's ability to
- 16 support spacecraft with radio frequency communications. As

1 such, the National Aeronautics and Space Administration has 2 embarked on the development of innovative technology to support 3 laser communications between spacecraft and earth. This new 4 technology was successfully demonstrated in late 2013 with the 5 lunar laser communications demonstration experiment aboard the 6 Lunar Atmosphere and Dust Environment Explorer spacecraft, which 7 is now orbiting the moon. Space laser communications technology 8 has the potential to provide ten to one hundred times higher 9 data rates than traditional radio frequency systems with the 10 same mass and power. This technology also aligns with the 11 State's interests in broadband communication technologies. 12 The legislature additionally finds that the National 13 Aeronautics and Space Administration plans to introduce laser 14 communications with its spacecraft at the beginning of the next 15 In order to implement this laser communications 16 network, the National Aeronautics and Space Administration has 17 begun planning for a global network of laser communication 18 ground stations. Since clouds present a major obstacle for laser communications in space, the National Aeronautics and 19 20 Space Administration recently conducted a detailed statistical 21 analysis of weather patterns that resulted in a set of potential

locations in the United States for their anchor ground station.

2014-2336 SB2583 CD1 SMA-1.doc

22

- 1 This analysis indicated that of all possible sites, Hawaii would
- 2 be the best location for their first operational laser
- 3 communications station.
- 4 As a result, the National Aeronautics and Space
- 5 Administration and the Pacific international space center for
- 6 exploration systems have begun to explore possible locations for
- 7 the National Aeronautics and Space Administration's first
- 8 operational laser communication ground station, to be
- 9 established in approximately 2020. This new technology will
- 10 require a base of technical experts that will not only support
- 11 the National Aeronautics and Space Administration's first laser
- 12 communications station, but also serve as a technical resource
- 13 for the entire network of laser communication ground stations
- 14 worldwide. It is envisioned that the University of Hawaii will
- 15 provide the needed technical expertise, beginning with support
- 16 for an atmospheric characterization effort in 2014 and maturing
- 17 to a center of excellence in ground to space laser
- 18 communications in the future. As such, the laser communications
- 19 ground station initiative will provide multiple opportunities
- 20 for high-tech jobs in the State, as well as substantial
- 21 improvements in broadband and optical fiber infrastructure
- 22 statewide.

2014-2336 SB2583 CD1 SMA-1.doc

1 The purpose of this Act is to provide funding for an 2 engineering assessment of the proposal to establish a laser 3 optical communications ground station in the State. This study will be conducted in partnership with the National Aeronautics 4 5 and Space Administration. Matching funds will be appropriated by the National Aeronautics and Space Administration and used to 6 7 conduct an engineering study to include completion of site surveillance and selection, an analysis of power and cooling 8 9 requirements, environmental assessments and permits, an 10 assessment of structural pads, and an analysis of roadways and 11 clearances for transportation of communications equipment. 12 SECTION 2. There is appropriated out of the general 13 revenues of the State of Hawaii the sum of \$250,000 or so much 14 thereof as may be necessary for fiscal year 2014-2015 for the 15 purpose of supporting a joint National Aeronautics and Space 16 Administration and Pacific international space center for 17 exploration systems engineering assessment and study, leading to 18 infrastructure construction beginning in 2016; provided that no 19 funds shall be made available under this Act unless the National 20 Aeronautics and Space Administration provides a dollar-for-21 dollar match of funds for the purposes for which this sum is 22 appropriated.

2014-2336 SB2583 CD1 SMA-1.doc

S.B. NO. S.D. 1

- 1 The sum appropriated shall be expended by the Pacific
- 2 international space center for exploration systems for the
- 3 purposes of this Act.
- 4 SECTION 3. This Act shall take effect on July 1, 2014.

Report Title:

Pacific International Space Center for Exploration Systems; National Aeronautics and Space Administration; Laser Communications Ground Station Initiative; Appropriation

Description:

Appropriates funds for an engineering assessment of a proposal to establish a laser optical communications ground station in Hawaii. (CD1)
