TESTIMONY OF SCOTT E. ENRIGHT  
CHAIRPERSON, BOARD OF AGRICULTURE

BEFORE THE HOUSE COMMITTEE ON  
AGRICULTURE  
FEBRUARY 10, 2014, 10:01 A.M.  
ROOM 312

HOUSE BILL NO. 2179  
RELATING TO LOWER HAMAKUA DITCH

Chairperson Wooley and Members of the Committee:

Thank you for the opportunity to testify on House Bill No. 2179. The purpose of this bill is to limit the toll that the Hawaii Department of Agriculture (HDOA) may charge for water from the Lower Hamakua Ditch. The HDOA provides comments.

The HDOA strives to promote all forms of agriculture in a fair and consistent manner. At the current rate of fifty cents per thousand gallons of irrigation water delivered, the Department maintains a very reasonable agricultural water rate. Hawaii County agricultural water rates are approximately \$1 per thousand gallons and other non-potable irrigation water systems are also within the 50 cents to \$2 per thousand gallon range.

When the legislature transferred the operation and management of State owned irrigation systems to the Department of Agriculture in 1987, it also created the irrigation system revolving fund. By doing so, it removed the program expenses from the general fund and placed them in the new revolving fund. By law, revolving funds are required to be self-sufficient. The revolving fund encompasses all of the State's irrigation systems which allows the Department to create a level playing field for all irrigation users

throughout the state, regardless of the size of the system. If this was not done, agriculture in certain areas would not be possible due to the extremely high cost of irrigation water.

The Lower Hamakua system does have the potential to deliver significantly more water than it currently does. We continue to work with farmers and ranchers along the system to open new acreage. Last year, the Department dedicated \$150,000 to encourage the growth of ranching in the State. This will be done by reimbursing the approved rancher up to thirty cents per thousand gallons of water delivered, effectively reducing their water delivery bill by sixty percent. We are currently in the process of soliciting an entity to manage the program and reviewing the possibility of additional funding for next fiscal year. We anticipate this program to last between two and five years dependent on funding. We would request awaiting the results of this program before moving forward with this bill.

Thank you for the opportunity to testify.

HEARING BEFORE THE  
HOUSE COMMITTEE ON AGRICULTURE

TESTIMONY ON HB 2179  
RELATING TO LOWER HAMAKUA DITCH  
Room 312  
10:01 AM

Chair Wooley, Vice Chair Onishi, and Members of the Committee:

I am Christopher Manfredi, President of the Hawaii Farm Bureau (HFB). Organized since 1948, the HFB is comprised of 1,832 farm family members statewide, and serves as Hawaii's voice of agriculture to protect, advocate and advance the social, economic and educational interests of our diverse agricultural community.

HFB **supports HB 2179**, which limits the toll that the Department of Agriculture may charge for water from Lower Hamakua Ditch.

Farmers and ranchers need not only stability but low cost of inputs to be competitive in the local and global marketplace. Water represents a major cost for farms and ranches particularly in times of drought. Defining affordable water rates will help provide this stability, certainty and competitiveness. Farmers and ranchers often plan crops and herds years in advance. Providing this cap will help ensure that those plans will be viable and that the yield will be competitive in the marketplace. This is an important factor for food security and bolsters the local economy.

We ask you to support HB2179.

Thank you.

HOUSE COMMITTEE ON AGRICULTURE  
Monday, February 10, 2014 – 10:01 a.m. – Room 312

**Ulupono Initiative Strongly Supports HB 2179, Relating to Lower Hamakua Ditch**

Dear Chair Wooley, Vice Chair Onishi and Members of the Committee:

My name is Kyle Datta and I am general partner of the Ulupono Initiative, a Hawai'i-based impact investment firm that strives to improve the quality of life for the people of Hawai'i by working toward solutions that create more locally grown food, increase renewable energy, and reduce/recycle waste. Ulupono invests in projects that have the potential to create large-scale, innovative change.

**Ulupono strongly supports HB 2179**, which caps the water rate charge for the Hamakua ditch system. The Hamakua ditch system is one of many systems that are operated by the Hawai'i Department of Agriculture (HDOA). The revenues and costs for all of DOA's irrigation systems get funneled into one aggregated fund. For fairness and simplicity reasons, the water rate charge for all DOA's irrigation systems is set the same. However, the supply and demand of water is very different for each irrigation system. For example, for the DOA irrigation systems in Molokai and Waimea, there is a shortage of available water relative to the demand. Yet, in Hamakua, our analysis indicates only ~1% of the available water is being sold with the rest of the water unsold and therefore unable to generate income for DOA.

The Hamakua region on the Big Island is also the State's prime livestock region. Through our overall food analysis, Ulupono identified proteins and dairy as two areas that Hawai'i can grow more of its own food but have not been fully successful in doing so for the past few decades. A large challenge for growing animals is the high cost of imported feed, which can comprise most of the production cost. The feed and transportation costs are highly dependent upon fossil fuel prices and are volatile, which leads to greater uncertainty for our local ranchers and dairymen. Ulupono believes the eventual solution involves grass-fed operations. However, growing grass requires steady but large amounts of irrigated water. Since the Hamakua water rate is set artificially at a statewide level without regard to supply and demand considerations, we believe the water rate is not maximizing its sales and income stream for DOA.

Ulupono would propose setting the water rate for the Hamakua ditch system no higher than 20 cents per one thousand gallons. We believe this lowered water rate will incentivize many ranchers to shift their production to grass fed operations over the next few years. Currently, with cow-calf operations, the only water being sold in Hamakua is largely being used for drinking and cooling of the cattle. Yet, if local ranchers and dairymen are able to economically irrigate their fields, our numbers indicate DOA's would generate more revenue than they currently do. We expect at least one ranch to switch over to grass fed operations if the water rates allowed them to economically do so. This one ranch alone should be able to purchase enough water to cover DOA's lost income from lowering the water rate.

Ulupono is working with DOA on helping with a water rate reduction. However, for ranchers, they need at least five years to shift their herds to a more grass fed operation. By passing this bill, it would reassure

them today that a sustained reduced water rate would occur. If ranchers do not believe this reduced water rate will last, they may not make the investment decision to switch to grass fed operations, which will heavily reduce water purchases and income to DOA.

We believe that working together we can help produce more local food, support an economically strong homegrown agriculture industry, which strengthens our community with fresh, healthy food. Thank you for this opportunity to testify.

Respectfully,

Kyle Datta  
General Partner

HOUSE COMMITTEE ON AGRICULTURE  
Monday February 10, 2014 10:01 a.m. Room 312

### HB 2179

Limits the toll that the Department of Agriculture may charge for water from Lower Hamakua Ditch.

Chair Wooley, Vice Chair Onishi and Members of the Committee:

My name is Alan Gottlieb, and I am a rancher and the Government Affairs Chairperson of the Hawaii Cattlemen's Council. The Hawaii Cattlemen's Council, Inc. (HCC) is the Statewide umbrella organization comprised of the five county level Cattlemen's Associations. Our 130+ member ranchers represent over 60,000 head of beef cows; more than 75% of all the beef cows in the State. Ranchers are the stewards of approximately 25% of the State's total land mass.

The Hawaii Cattlemen's Council supports the intent of HB 2179, but we want to point out that we have been working with the Hawaii Department of Agriculture for the past year to receive a reduced rate for all farmers from the Hamakua Ditch.

Hawaii's cattle industry faces a number of challenges, including high fuel and transportation costs, the rising costs of livestock feed, limited and aging processing facilities, and ongoing drought conditions that disrupt cattle weight gains and interrupt the marketing of consistent high quality beef. However, the growing demand by restaurants and local consumers for local grown grass fed beef presents a golden opportunity for Hawaii beef cattle industry provided conditions in Hawaii are optimal for raising consistent, high quality grass fed beef.

Despite this opportunity, beef cattle producers face production challenges. One of the significant challenges is finding or producing consistent high quality pasture to get cattle ready for market. Due to inconsistent rainfall, unavailable irrigation systems, and, in those places where irrigation is available, unaffordable water rates, getting cattle to optimum weight for slaughter on a grass diet in Hawaii is currently limited to a few exceptional geographic locations that have year round consistent rainfall. For these reasons currently only ten per cent of the cattle produced in the State annually is being brought up to optimum weight for slaughter on grass in the State. Other agricultural commodities face or faced the same limitations due to water shortages, including sugar cane and vegetable crops. However with irrigation of these lands, high productivity is achievable. In certain locations throughout the State where irrigation systems developed by the sugar industry remain in place, the production of high quality grass finished beef can be increased.

Currently, the water rates are set so high that the majority of water from many State water systems is unused and wasted. The Hamakua District Water system is a prime example, because so much of its water goes unused. Lowering the cost of water from the Hamakua Water System for pasture irrigation purposes will in fact raise revenues for the water system and the State by selling water which now goes unused. Such a measure would encourage ranchers to set up pastures which would have access to the Hamakua Irrigation system to raise calves which are otherwise now being shipped out of State for finishing on the Mainland. This would be consistent with your goals for food security, sustainability, and the Governors New Day Plan.

We appreciate this opportunity to provide testimony on this matter.
