

# **SB381**

## **RELATING TO AGRICULTURE.**

**Permits the acquisition of raw milk and raw milk products by owners of cows, goats, and sheep and cow, goat, and sheep shares if certain conditions are met. Requires farms and dairies that produce raw milk or raw milk products to register with the department of health. Permits farms and dairies to set up a location near an improved road to distribute their products to owners of cow, sheep, or goat shares. Prohibits the sale and redistribution of raw milk and raw milk products.**

**Testimony in OPPOSITION to SB 381**  
**RELATING TO AGRICULTURE**

SENATOR RUSSELL E. RUDERMAN, CHAIR  
SENATE COMMITTEE ON AGRICULTURE

SENATOR JOSH GREEN  
SENATE COMMITTEE ON HEALTH

Hearing Date: February 12, 2015  
Time: 3:40 PM

Room Number: 414

1 **Fiscal Implications:** This measure has fiscal implications that were not included in the  
2 executive budget. Additional staffing would be required to monitor raw milk distribution and  
3 sales.

4 **Department Testimony:** The Department of Agriculture (DOA) has agreed to defer to DOH on  
5 the issue of milk safety as DOH has sole jurisdiction over milk safety through Hawaii  
6 Administrative Rules Chapter 11-15, and the Grade "A" Pasteurized Milk Ordinance (PMO) and  
7 through partnership agreements with FDA, and the National Conference on Interstate Milk  
8 Shipments (NCIMS). Passage of this bill would be detrimental to the health and safety of  
9 Hawaii's residents and visitors as our testimony will attempt to convey, and creates a duplication  
10 of efforts between DOA and DOH in the area of milk safety.

11 The Department respectfully opposes this bill.

12 According the Centers for Disease Control (CDC) outbreaks linked to raw milk in the U.S. have  
13 more than quadrupled "... from an average of three outbreaks per year during 1993-2006 to 13  
14 per year during 2007-2012 ..." A CDC study published in the journal Emerging Infectious  
15 Diseases found that "... most outbreaks were caused by Campylobacter spp. (77%) and by  
16 nonpasteurized milk purchased from states in which nonpasteurized milk sale was legal (81%) ...

1 This increase was concurrent with a decline in the number of states in which the sale of  
2 nonpasteurized milk was illegal, from 28 in 2004 to 20 in 2011 (7–9) and with an increase in the  
3 number of states allowing cow-share programs (from 5 in 2004 to 10 in 2008) ..." - The study  
4 concludes that "... legalization of the sale of nonpasteurized milk in additional states would  
5 probably lead to more outbreaks and illnesses ... [and recommends that] public health officials  
6 should continue to educate legislators and consumers about the dangers associated with  
7 consuming nonpasteurized milk ..."

8 For additional information, the department respectfully recommends the following resources:

9 Document Title: The title of the research article published online ahead of print December 10,  
10 2014 in the CDC journal, Emerging Infectious Diseases, is "Increased Outbreaks Associated  
11 with Nonpasteurized Milk, United States, 2007–2012"

12 The article can be downloaded at: [http://wwwnc.cdc.gov/eid/article/21/1/14-0447\\_article](http://wwwnc.cdc.gov/eid/article/21/1/14-0447_article)

13 The CDC Media Advisory posted on December 10, 2014, entitled "New Study Shows Increase  
14 in Raw Milk-Associated Outbreaks", can be downloaded from the following website:

15 <http://www.cdc.gov/media/releases/2014/a1210-raw-milk.html>

16 The CDC topic page on Food Safety and Raw Milk is available at:

17 <http://www.cdc.gov/foodsafety/rawmilk/raw-milk-index.html>

18 The corresponding author of the article, Elisabeth A. Mungai, is with the U.S. Centers for  
19 Disease Control and Prevention in Atlanta, Georgia and may be reached by e-mail at

20 [Elisabeth.Honorat@CDC.HHS.gov](mailto:Elisabeth.Honorat@CDC.HHS.gov)

21 Outbreaks associated with nonpasteurized milk continue to pose a public health challenge.  
22 Legalization of the sale of nonpasteurized milk in additional states would probably lead to more  
23 outbreaks and illnesses. This possibility is especially concerning for vulnerable populations, who  
24 are most susceptible to the pathogens commonly found in nonpasteurized milk (e.g., keiki,  
25 kupuna, and persons with immune-compromising conditions).

26 Before the invention and acceptance of pasteurization, raw milk was a common source of the  
27 bacteria that cause salmonella, campylobacter, diphtheria, severe streptococcal infections,

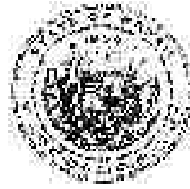

1 typhoid fever, and other foodborne illnesses. These illnesses killed many people each year,  
2 especially young children. In the 1900s many mothers recognized this risk and would boil milk  
3 (bringing it to a temperature of 212°F) before giving it to their infants and young children.

4 Many studies have shown that pasteurization does not significantly change the nutritional value  
5 of milk – pasteurized milk is rich in proteins, carbohydrates, and other nutrients. Heat slightly  
6 affects a few of the vitamins found in milk-- thiamine, vitamin B12, and vitamin C-- but milk is  
7 only a minor source of these vitamins.

8 Mainstream scientific associations like the American Medical Association, the American  
9 Academy of Pediatrics, the FDA, and CDC all strongly recommend that States should not allow  
10 the distribution of raw unpasteurized milk as it is a danger to our community and any distribution  
11 or sales of raw milk should remain illegal. There are no peer-reviewed, documented studies that  
12 show any positive risk-benefit associated with this dangerous activity. This bill also contains no  
13 public health regulations that would ensure the safety of the raw milk.

14 The most susceptible populations for food illnesses are our keiki, kupuna and immune-  
15 compromised individuals. Exposing these populations to raw milk has no health benefits and  
16 places these populations at undue risk for contracting potentially fatal or debilitating diseases.

17 Thank you for the opportunity to testify.

Comments: There is no scientific evidence for supporting a law such as this. It has been found over and over that this practice of consuming raw milk is indeed dangerous and deadly. It is ironic that some legislators want to apply the precautionary principle to genetic engineering which has had no deaths or illness attributed to it, but the want to make something that has killed people, especially young kids, legal. I say apply that precautional principle, rather the paralyzingly principle to raw milk and keep our keiki safe from bad practices .
