

DAVID Y. IGE  
GOVERNOR OF HAWAII

DEPT. COMM. NO. 269

VIRGINIA PRESSLER, M.D.  
DIRECTOR OF HEALTH

STATE OF HAWAII  
DEPARTMENT OF HEALTH  
P. O. BOX 3378  
HONOLULU, HI 96801-3378

In reply, please refer to:

January 25, 2017

The Honorable Ronald D. Kouchi,  
President and Members of the Senate  
Twenty-Ninth State Legislature  
State Capitol, Room 409  
Honolulu, Hawaii 96813

The Honorable Joseph Souki, Speaker  
and Members of the House of  
Representatives  
Twenty-Ninth State Legislature  
State Capitol, Room 431  
Honolulu, Hawaii 96813

Dear President Kouchi, Speaker Souki, and Members of the Legislature:

For your information and consideration, I am transmitting a copy of the

Report Environmental Response Law and Hawaii Emergency Planning and Community  
Right to Know Act Financial and Environmental Site Information as required by Section  
128D and 128E of the Hawaii Revised Statutes (HRS). In accordance with Section 93-  
16, Hawaii Revised Statutes, I am also informing you that the report may be viewed  
electronically at

<http://health.hawaii.gov/opppd/department-of-health-reports-to-2017-legislature/>

Sincerely,

Handwritten signature of Virginia Pressler in cursive.

VIRGINIA PRESSLER

Director of Health

Enc.

c: Legislative Reference Bureau

**REPORT TO THE TWENTY-NINTH LEGISLATURE  
STATE OF HAWAII  
2017**

**PURSUANT TO CHAPTERS 128D AND 128E, HAWAII REVISED STATUTES,  
REQUIRING THE DEPARTMENT OF HEALTH TO REPORT  
ENVIRONMENTAL RESPONSE LAW AND  
HAWAII EMERGENCY PLANNING AND COMMUNITY RIGHT TO KNOW ACT  
FINANCIAL AND ENVIRONMENTAL SITE INFORMATION  
FY2016**

**PREPARED BY:  
DEPARTMENT OF HEALTH  
STATE OF HAWAII  
DECEMBER 2016**

Blank Page

---

**EXECUTIVE SUMMARY**  
**REPORT ON THE ENVIRONMENTAL RESPONSE REVOLVING FUND**  
**FOR FISCAL YEAR 2016**

**Chapter 128D, HRS, Environmental Response Law, and**  
**Chapter 128E, HRS Hawaii Emergency Planning and Community Right-to-Know Act**

This report, prepared by the State of Hawaii Department of Health (DOH), Environmental Health Administration (EHA), Hazard Evaluation and Emergency Response (HEER) Office, complies with the Hawaii Environmental Response Law (HERL), Chapters 128D and 128E, Hawaii Revised Statutes (HRS) requiring the DOH to report to the State Legislature on the Environmental Response Law and Hawaii Emergency Planning and Community Right to Know Act (HEPCRA).

The report presents an accounting of FY2016 Chapter 128D, HRS, Environmental Response Revolving Fund (ERRF) budget and expenditures for five Environmental Health Administration (EHA) programs. The report also presents an accounting of Chapter 128E, HRS, HEPCRA Tier II filing fees collected and distributed for FY2016.

**ERRF Supports Environmental Health Administration**

Prior to FY2016, the ERRF funded five Environmental Health Administration (EHA) programs with 31 occupied positions. They are the Hazard Evaluation and Emergency Response (HEER) Office, Environmental Management Division (EMD), Clean Water Branch (CWB), Safe Drinking Water Branch (SDWB), and the Solid and Hazardous Waste Branch (SHWB). The 2015 Legislature changed the means of financing for all 31 occupied positions from ERRF to general funds and eliminated 10 vacant positions, effective July 1, 2015. The legislative changes enacted removed certain uses of the fund, returning the focus to removal, remediation, and detection of oil and pollutant or contaminant releases; and removal and remediation of hazardous waste and any other solid, liquid, or gaseous substance that may harm the environment.

**Revenue**

ERRF generates revenue in variable amounts during any given year from the fines, penalties, and interest earned by the environmental programs, and from a 5-cent share

of the “environmental response oil tax.”, and from a 4.8% share of a 19 cent tax levied on each one million British thermal units of fossil fuel sold by a distributor. DOH receives a 5-cent share of the \$1.05 per barrel tax. The General Fund receives sixty cents of the tax. Two funds, the Department of Business, Economic Development and Tourism Energy Systems Development fund and the Hawaii Department of Agriculture, Agricultural Development and Food Security special fund receive the remaining 40 cents. In addition, fines and penalties generated by the Hazard Evaluation and Emergency Response Office, Clean Water Branch, Safe Drinking Water Branch, Solid and Hazardous Waste Branch, Clean Air Branch, and the Indoor and Radiological Branch are deposited into the ERRF. Oil tax revenue to DOH in FY2016 was \$1,287,966. Total revenue to the ERRF, including the oil tax revenue, was \$1,517,180.

**Budget and Expenditure**

The legislature appropriated \$1,712,734 for operating expenses to the Environmental Management Division (EMD) and Hazard Evaluation and Emergency Response (HEER) Office.

The state expended \$1,120,958 from the ERRF during FY 16 for the five programs.

**DOH Oil Tax Revenue Declining**

The 5-cent per barrel “environmental response tax” revenue to environmental programs is in decline. For fiscal years 2012, 2013, 2014, 2015 and 2016 oil tax revenue was \$1,314,717, \$1,294,756, \$1,239,739, \$1,236,065 and \$1,287,966, respectively. After multiple years of declining revenues, FY2016 saw a slight increase, possibly due to the additional revenue stream from the 19 cent tax on BTUs of fossil fuels.

**2015 Legislative Changes to HRS 128D and HRS 243 to Affect ERRF in FY2016**

In July, 2015, Governor Ige signed into law revisions to Section §128D-2 to limit the uses of the fund and remove references to food security and sustainable energy development. In addition, revisions to §243-3.5

## EXECUTIVE SUMMARY

---

modified the Environmental Response, Energy and Food Security Tax to add a 19 cent tax on each one million British thermal units of additional fossil fuels and to allocate 4.8% of said tax to the ERRF. The change in the means of finance for the 31 occupied positions from ERRF to general also took effect in July 2015. Changes affecting the ERRF have been reported in detail in this Report.

### Hawaii State Response Program Impacted by Federal Budget Cuts

Because ERRF funding does not fully support the state's response obligation, the HEER Office implements the environmental site identification, assessment, and cleanup program using combined ERRF, General Fund, and federal cooperative agreement funding. The United States Environmental Protection Agency's (EPA) budget cuts from 2010 to 2016 resulted in a net loss of \$363,000 to our EPA State Response Program (SRP) grant, reducing funding for both staff and program activities. While the SRP allocation remained stable between 2014 and 2015 at \$980,850, our FY2016 allocation dropped to \$936,300. The smaller Preliminary Assessment/Site Investigation (PA/SI) grant which funds site discovery activities has been cut from \$275,000 in 2013 to the 2015 allocation of \$223,000, but has been temporarily restored for FY2017 to \$275,000. EPA has notified HEER that the SRP grant allocation for 2016 is likely to decrease substantially due to a proposed change in the EPA allocation formula. Future funding levels for PA/SI are expected to drop back to no more than \$225,000 in 2017.

### The Hawaii State Response Program (HSRP) Site Lists

This annual report presents four distinct Site Lists at the end of this document.

First, per HRS 128D, this annual report identifies Sites Eligible for Possible Remedial Action Under The Comprehensive Environmental Response Compensation and Liability Act (CERCLA). Three of these sites are listed on the National Priorities List (NPL). Eight other Hawaii sites met initial criteria for listing on the NPL. Responsibility for oversight of these sites has been transferred to the HEER Office.

Secondly, the *FY2016 Hawaii State Response Program (HSRP) Chemical Release Notification Log* lists 480 release

notifications managed by the HEER Office State On-Scene Coordinators (SOSCs). HEER identified 276 cases directly related to petroleum releases.

Thirdly, the *Hawaii State Response Program List of Priority Sites* presents all non-military Hawaii sites identified for potential or known non-emergency response actions under HRS 128D. The list shows 538 active sites under direct DOH oversight in the various State programs. This includes 63 new sites added during the last fiscal year, and 23 sites with known or suspected contamination that received No Further Action (NFA) determinations since the beginning of FY2016.

Finally, the *Hawaii State Response Program Defense and State Memorandum of Agreement (DSMOA) Program List of Priority Sites* presents a list of 400 military sites in Hawaii for which HEER's Site Discovery and Remediation (SDAR) section provides oversight. This includes 17 new DSMOA site listings and 26 sites with known or suspected contamination that received NFA determinations. SDAR provides regulatory oversight of hazardous substance response actions for DOD service branches under federal CERCLA authorities and HRS 128D. Sites include numerous high priority unexploded ordnance sites (UXO), and multiple diverse military operations, including tank farms, pipelines, industrial activities and active training sites. A DOD cooperative agreement funds investigation, cleanup and DOH oversight of most military sites under EPA CERCLA authority. Investigation and cleanup of petroleum-contaminated military sites are exempt under CERCLA, and are conducted under HRS 128D authority. Cleanup and DOH oversight for petroleum related activities are also covered under the cooperative funding agreements.

### Hawaii Department of Health Website

Additional information about the DOH and its environmental programs is located at:

<http://health.hawaii.gov/>. Specific information on the environmental programs may be located through the 'Environmental Health' and 'Emergency Preparedness and Response' drop down menus on the front page, under Health and Safety Topics.

Information about HEER Office activities including recent events, new initiatives, public records, fact sheets and comprehensive guidance documents may also be directly accessed at: <http://eha-web.doh.hawaii.gov/eha-cma/Org/HEER/>

## REPORT ON CHAPTER HRS 128D, HRS, ENVIRONMENTAL RESPONSE LAW (HERL)

### Environmental Response Revolving Fund (ERRF) Budget Report

The Chapter 128D, HRS, Environmental Response Law (HERL) annual report to the Twenty-ninth Legislature, State of Hawaii, presents an accounting of Environmental Response Revolving Fund (ERRF) revenue and monies budgeted and expended for implementing environmental protection and response plans and actions.

Five DOH environmental programs share revenue deposited to the ERRF. They are the Hazard Evaluation and Emergency Response (HEER) Office, Environmental Management Division (EMD), Clean Water Branch (CWB), Safe Drinking Water Branch (SDWB), and the Solid and Hazardous Waste Branch (SHWB).

The Department notes that the legislative changes to HRS 128D, enacted in July, 2015, alter the statutory uses of the ERRF. These changes have been reflected in this 2016 Report.

#### ERRF Uses

In accordance with HRS 128D the ERRF may be used for the following:

- (1) Removal, remediation, and detection of oil and pollutant or contaminant releases;
- (2) Removal and remediation of hazardous waste and any other solid, liquid, or gaseous substance that may harm the environment; and
- (3) The payment of expenditures authorized by the Director under section 128D-4, Uses of the Fund.

#### Special Funding to Attorney General

The HEER Office receives key legal support from the state Department of Attorney General on a variety of issues including issuing orders to noncompliant parties, negotiating agreements with Voluntary Response Program participants, providing legal guidance on program development and legislative proposals, and developing guidance for property owners on implementation of deed restrictions in accordance with Hawaii's Uniform Environmental Covenant Act.

#### Annual de minimis Settlements

Chapter 128D, HRS, Environmental Response Law, requires that the department report annually on any de minimis settlements. During FY2016, there were no de minimis settlements.

#### Five Environmental Health Program Budgets

The legislature appropriated \$ 1,712,734 for operating expenses to the Environmental Management Division (EMD) and the Hazard Evaluation and Emergency Response (HEER) Office.

The state expended \$1,120,958 for the five programs. The operational expenses were for emergency and non-emergency environmental response contractors, salary and fringe benefits, travel, response training, standby and overtime pay, legal services, and Tier II Fees distributed to the county LEPCs.

#### Fund Revenue

Revenue is generated in variable amounts during any given year from the fines, penalties, and interest earned by the environmental programs, and from the "environmental response oil tax". The "environmental response tax" deposited to the ERRF for DOH use is a state revenue tax of five cents per barrel, or fractional part of a barrel, of petroleum product sold by a distributor to any retail dealer or end user, other than a refiner of petroleum product. Overall, the oil tax revenue is on the decline. Oil tax revenue for the past five fiscal years is as follows: 2012 (\$1,314,717), 2013 (\$1,294,756), 2014 (\$1,239,739), 2015 (\$1,236,065), and 2016 (1,287,966).

**Environmental Response Revolving Fund Revenue – FY2016**

HTH 849 and HTH 840

ENVIRONMENTAL RESPONSE TAX	1,287,966
INVESTMENT POOL ACCOUNT	3,397
FEES, FILING OF CHEMICAL INVENTORY FORMS	81,800
FEES, VOLUNTARY RESPONSE ACTIONS	44,673
COST RECOVERY	4,935
REFUND/REIMBURSEMENT OF PRIOR PERIOD EXPENDITURES	39,795
VIOLATIONS OF AIR POLLUTION CONTROL REGULATIONS	97,000
VIOLATIONS OF HAZARDOUS WASTE REGULATIONS	220,864
VIOLATION OF WATER POLLUTION REGULATIONS	-356,390*
VIOLATION OF SOLID WASTE REGULATIONS	51,594
VIOLATIONS-DEPOSIT BEVERAGE CONTAINER PROGRAM	22,098
COMMUNITY NOISE CONTROL	13,000
DONATIONS, GIFTS OR GRANTS (DEPARTMENT)	6,448
TOTAL	<u>1,517,180</u>

*\*Note: Certain funds for water pollution violations went into a Supplemental Environmental Project (SEP) instead of being deposited into the ERRF, resulting in the negative amount shown. \$400,000 was inadvertently deposited to the ERRF, and subsequently transferred to a separate trust account for Ma’ili’ili Watershed Supplemental Environmental Project (SEP), per the settlement agreement.*

**Environmental Response Revolving Fund Expenditure – FY2016**

HTH 849 and HTH 840

PERSONNEL	173,112
OPERATIONS	947,846
EQUIPMENT	-
TOTAL	<u>1,120,958</u>

**REPORT ON CHAPTER 128E, HRS, HAWAII EMERGENCY PLANNING AND COMMUNITY RIGHT-TO-KNOW ACT (HEPCRA)**

**Environmental Response Revolving Fund (ERRF) HEPCRA Budget Report**

In compliance with Chapter 128E, HRS, Hawaii Emergency Planning and Community Right-to-Know Act (HEPCRA), this annual report to the Twenty-Ninth Legislature, State of Hawaii, 2017 presents the accounting of Tier II fee amounts as follows:

- Amount collected during Fiscal Year 2016
- Amounts distributed during Fiscal Year 2016
- Projected collection for Fiscal Year 2017

**HEPCRA Facility Reporting and Fees**

HEPCRA facilities are those that store, use, or manufacture above defined thresholds, any hazardous substance, or extremely hazardous substance. An owner or operator of a HEPCRA facility must file notification of such “Tier II” activity and pay a \$100 filing fee annually. HEER Office staff assesses each submitted Tier II report, records the HEPCRA facility data into the EPA Tier II Submit database, and processes the fees for deposit to the Environmental Response Revolving Fund (ERRF).

DOH distributed the deposited Tier II filing fees to the Hawaii State Emergency Response Commission (HSERC) and the Local Emergency Planning Committees (LEPCs) for operating expenditures. The annual amounts distributed to the LEPCs are based on Tier II fees collected from two fiscal years prior and after HSERC operating expenditures have been deducted.

As of June 30, 2016, there are 848 qualifying Tier II facilities. Military facilities must submit Tier II information but are exempt from filing fees.

The HSERC, LEPCs, and HEER Office are continuing efforts to identify and contact possible non-reporting facilities through community outreach and facility inspections.

**Tier II Filing Fees Collected and Distributed – FY2016**

FY 2016 Amount Collected	\$81,800
FY 2016 Amount Distributed	\$71,671
FY 2017 Projection of Fees to be Collected	\$85,000

County	Funds Distributed to LEPCs	Number of Qualifying Facilities		
		Non-Military Facilities	Military Facilities	Total Facilities
Honolulu	\$32,789	388	29	417
Hawaii	\$17,158	203	4	207
Maui	\$13,610	161	3	164
Kauai	\$8,113	96	5	101
Total	\$71,670	848	41	889

Blank Page

## FIVE KEY ENVIRONMENTAL HEALTH ADMINISTRATION ENVIRONMENTAL PROGRAMS

The ERRF funds operating expenses to five environmental programs: The Hazard Evaluation and Emergency Response (HEER) Office, Environmental Management Division (EMD), Clean Water Branch (CWB), Safe Drinking Water Branch (SDWB), and the Solid and Hazardous Waste Branch (SHWB).

### The Hazard Evaluation and Emergency Response Office Hawaii State Response Program Management and Implementation

#### The HEER Office Mission

The mission of the HEER Office and HSRP is to address all aspects of releases of hazardous substances and pollutants, including oil, into the environment. HEER Office work includes preventing, planning for, and responding to hazardous substance releases, or risks of releases. HEER accomplishes this mission by addressing contaminated sites with the highest risk to human health and the environment first, preventing contamination rather than cleaning up after the fact, and basing decisions on sound scientific principles and common sense.

#### The Hawaii State Response Program (HSRP)

ERRF funding to the Hazard Evaluation and Emergency Response (HEER) Office is used for operational costs for the office's implementing program, the Hawaii State Response Program (HSRP). Three operating sections address important focus areas of the HSRP. They are the 1) Emergency Preparedness and Response Section, 2) Hazard Evaluation Section, and the 3) Site Discovery, Assessment and Remediation Section.

The HSRP provides for oversight of assessment and cleanup activities on chemical emergency sites, and on high and medium priority sites across the Hawaiian Islands, including privately owned, municipal, and state owned properties, and federal military sites. DOH curtailed oversight of low priority sites due to state budget constraints.

HEER staff works with property owners, the environmental community, developers, the public, and other state and federal agencies to implement solutions for eliminating risk of chemical exposure to humans and the environment. HSRP examples of work performed are as follows:

- Emergency response to releases of hazardous substances that pose an imminent danger to people or the environment.

- Non-emergency response actions on properties presumed or known to pose a risk to human health and/or the environment because of contamination with hazardous substances.
- Identification and inspection of sites storing and using hazardous chemicals on property.
- Performing ecological and human health risk assessment in the areas of toxicological assessments of chemical threats to human health.
- Establishing appropriate cleanup levels for chemical contamination.
- Assisting the public and responsible parties with access to information such as:
  - Health effects of chemicals
  - Public Record documents
  - Technical guidance and reference materials for cleaning up contaminated sites
- Ongoing development and management of site related electronic records.
- Environmental policy, law, and rule development.

#### *Essential Federal Funding Support to the HSRP*

Current ERRF funding supports only part of the HEER Office state response obligation. Consequently, the HEER Office relies heavily on three cooperative agreement sources of federal funding to implement the office's mission and the HSRP.

The federal funding sources are the EPA State Response Program (SRP), the EPA Preliminary Assessment/Site Inspection (PA/SI) Cooperative Agreements, and the Department of Defense and State Memorandum of Agreement (DSMOA) Cooperative Agreement. Together, these federal programs provided over 40% of the HSRP funding in FY2016.

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

### ***EPA State Response Program (SRP) Cooperative Agreement***

The HEER Office continues to receive funding from the EPA State Response Program (SRP) grant under Section 128(a) of the Small Business Liability Relief and Brownfields Revitalization Act (SBLRBRA) of 2002. This SRP grant provides crucial funds for staff salaries, capacity building, and program development activities. The FY2016 grant award was \$936,300, down \$43,000 from FY2015, and down a total of \$363,000 over the 2010 SRP grant. EPA has notified DOH to expect further cuts for the FY2017 grant cycle.

### ***EPA Preliminary Assessment/Site Inspection (PA/SI) Cooperative Agreement***

The EPA Preliminary Assessment/Site Inspection Grant funds site discovery efforts combined with federal CERCLA (Superfund) evaluation of sites. HEER staff evaluates and rates sites based on PA/SI system criteria to determine their eligibility for the National Priority List. When a rated site scores too low to be eligible for the National Priority List of Sites, EPA transfers site-oversight responsibility from the EPA to the State of Hawaii. This year, the HEER Office used the \$275,000 PA/SI grant to fund positions, conduct field-screening activities, and fund laboratory costs to complete rapid site screenings that assess residential areas that may have been affected by historic releases of pesticides and other contaminants.

### ***Department of Defense/State Memorandum of Agreement (DSMOA) Cooperative Agreement:***

The HEER Office participates in two federal cleanup programs. The office provides oversight services to the military on sites located on federal property and managed and funded under the Department of Defense/State Memorandum of Agreement (DSMOA) Program. HEER Office also manages assessment and cleanup activities for sites delegated to the DSMOA funded Formerly Used Defense Sites (FUDS).

The federal government established the DSMOA program to cover reimbursement of costs incurred by the state in providing oversight services to the Department of Defense (DOD) installations conducting environmental cleanup activities funded under the Defense Environmental Restoration Program (DERP). DSMOA funds are given to the state based on the state's request for advanced or reimbursement payment. The DSMOA Cooperative Agreement funds all staff positions overseeing remedial investigations and cleanups under these two DOD programs.

For FY2016, the state's reimbursement under DSMOA was \$178,300.

### ***Modern Data Management and Hazard Tracking Tools***

Residual contamination exists at hundreds of sites in Hawaii. Identifying these sites to ensure that unhealthy exposures are not occurring is a shared responsibility of the HEER Office and the affected property owners. The HEER Office has converted many of its public records to electronic format to make them easily available to the public in accordance with Hawaii's Sunshine Law.

### ***A HEER/UH MOA for Analytical Laboratory Service***

Since 1998, the HEER Office has entered into contracts with the University of Hawaii (UH) to characterize unknown hazardous substances. The successful collaboration allows for quick identification of chemical pollutant unknowns while conducting emergency response actions. The HEER Office is currently in a five-year contract with UH, effective May 1, 2014 until April 30, 2018. In addition to analyzing unknown substances, the university laboratory staff assists in training and outreach to Fire HazMat teams throughout the State.

### ***Cost Recovery***

Chapter 128D, HRS, provides legal authority to cost recover all ERRF expenses for DOH response actions. For FY 2016, HEER Office received \$60,199. HEER Office mechanisms for the cost recovery require charging billable staff time and expenses to the ERRF and include following:

**Responsible Party Agreement:** DOH recovers oversight expenses for the Honolulu Authority for Rapid Transportation, Honolulu Harbor, Hickam Community Housing, and GASCO cleanup sites in accordance with the terms of their respective Agreements for Remedial Action.

**Fast Track Agreement:** Parties wishing to receive expedited oversight of investigation and cleanup of low and medium priority sites have the option to enter into Fast Track Agreements, in which they pay oversight costs in return for face to face meetings and expedited document reviews.

**Voluntary Response Program Agreement:** DOH recovers oversight expenses for VRP and other cleanup sites in accordance with the terms of their respective HRS 128D Part II Voluntary Response Program Agreements for Remedial Action.

## **FIVE KEY EHA ENVIRONMENTAL PROGRAMS**

---

Emergency Response Action Expenditures: Money spent for responding to a chemical emergency is cost recoverable, only when expended from the ERRF. State On-Scene Coordinator's (SOSCs) personnel costs are paid from the General Fund and are not cost recoverable.

Moneys expended from the ERRF for private emergency responder contractor services are cost recoverable.

Penalties: Penalties are assessable to a Responsible Party for failure to report a release of a hazardous substance, pollutant, or contaminant, or for failure to comply with a departmental or judicial cleanup order.

### ***Critical Positions Eliminated in FY2016***

The elimination of ten vacant ERRF funded positions in July 2015, per Act 119, SLH 2015, resulted in the loss of four positions within the HEER Office, including an epidemiology specialist, an ecological risk assessor, a remedial project manager and our grant manager position. While all of these positions are important to the HEER Office functions, the grant manager served an especially important role in the financial tracking and coordination of HEER's federal grants. Last fiscal year, the HEER Office received over \$1.3 million in federal grant money. In addition to managing HEER's federal grants, the position also performed cost recovery work to recoup the costs incurred during an emergency response or during regulatory oversight by our remediation team.

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

### HEER Office Emergency Preparedness and Response Key Actions

The HEER Office is responsible for planning, preparing for, and responding to releases of hazardous substances that may cause immediate and substantial threat to human health or the environment. This major area of responsibility is managed by General-funded State On-Scene Coordinators (SOSCs) trained to enter hazardous atmospheres in self-contained breathing apparatus (SCBA) and various types of personal protective equipment.

SOSCs are back-up personnel to first responder County HAZMAT teams and on 24-hour call.

In FY2016 HEER's SOSCs managed 480 release notifications and performed direct oversight on 103 of those cases.

Notable HEER Office responses during FY2016 include the following:

#### **Incident Case No.: 20151018-1145 NAVSEA Utility Boat #2**

On October 18, 2015, a Naval Sea Systems Command (NAVSEA) workboat released approximately 60 gallons of oil (diesel fuel and hydraulic fluid). The cause of the release was from a shaft packing failure resulting in water intrusion and partial vessel sinking. The workboat was located at the Inactive Ships On-Site Maintenance Office (INACTSHIPMAINTO) in Pearl Harbor Middle Loch which maintains and inspects inactivated ships. The

vessel was refloated successfully using lifting bags, a barge, and a crane.

**Incident Case No.: 20151028-0816 - Grounded Vessel Waialae Beach Park**

A fishing vessel ran aground on a reef in the early morning. The vessel was stuck high on the reef and could potentially release fuel. The HEER Office went to investigate with DLNR and USCG. Damage to the reef was minimal and the hull was intact. Hazardous materials including fuel were removed to avoid a potential release. Various options for the removal of the vessel were discussed with the owner and the vessel was removed without a release into the environment.

**Incident Case No.: 20151209-1926 - Costco Kailua-Kona Freon Release**

The fan axle in the facility’s refrigeration system failed and caused the fan blades to cut into the condenser. System integrity was compromised and released 900 pounds of Freon into the outside air from the rooftop. The facility was not evacuated and the staff and customers were not impacted. Food in the affected refrigerators was transferred to on-site chill containers.

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

### **Incident Case # 20151113-1030 Abandoned Drums Near Halawa Stream**

An anonymous call reported several abandoned drums in Halawa Valley near a commercial area. The HEER office investigated and found various 55-gallon drums near a stream behind several businesses. The drums were not labeled. Field testing was conducted and the contents of the drums were determined to be water. The land owner was contacted and the drums were properly disposed of.

**FIVE KEY EHA ENVIRONMENTAL PROGRAMS**

---

**Incident Case No.: 20151208-0800  
Northwest Energy Innovations  
Release**

On December 8, 2015, a release of approximately 15 gallons of hydraulic oil occurred 0.6 miles off of Kaneohe Marine Corps Base Hawaii. The source is from Azura, a 45-ton test wave energy device. Azura extends 12 feet above and 50 feet below the water and converts the waves' vertical and horizontal movements into electricity. It is hoped that the technology can someday be used as a renewable power for offshore fueling stations for the Navy fleet and provide electricity to coastal communities.

**Incident Case No.: 20160430-1238  
Grace Pacific 80-gallon diesel fuel  
spill**

On April 30, 2016, a Grace Pacific operator discovered a broken valve releasing approximately 80 gallons at one of their base yards. The fuel was recovered and reused to make asphalt.

**Incident Case No.: 20160203-1326 Dry Dock Disposal** An abandoned floating dry dock disposed of by State DOT at sea.

**Incident Case No.: 20160122-1937 F/V Hoku Kea**

A 39-foot vessel ran into reef. No hazardous substances released. A contractor was hired to remove 500-plus gallons of diesel, 1 gallon of lubricating oil, and seven batteries from the boat. The boat was salvaged and disposed of.

**FIVE KEY EHA ENVIRONMENTAL PROGRAMS**

**Incident Case No.: 20160324-1153 Kauai Veterans' Express Trucking Diesel Spill (above)**

On March 24, 2016, a fuel tank overturned and released approximately 50 gallons of diesel. Kauai HazMat Team responded and built a dirt boom to initially contain the oil; absorbent material was also used to absorb the release.

**Incident Case No.: 20160616-0940 Trailer tanker's landing gear failed with 8,500 gallons of gasoline inside.**

While unhooking from tank trailer, landing gear failed. The 4 compartment tank trailer was full with 8,500 gallons of fuel products. Trailer fell down and buckled in the middle compromising the weld creating a pin-hole size leak. Lightening took 4 hours to complete; 8 oz. of gasoline leaked from the trailer during that time.

Blank Page

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

### **Hazard Evaluation Actions and Studies**

#### ***Ecological and Human Health Risk Key Studies***

The HEER Office Hazard Evaluation (HE) Section provides ecological and human health risk assessment, conducts toxicological assessments of chemical threats to human health, establishes appropriate cleanup levels for chemical contamination, and assists the public with information concerning the health effects of chemicals.

#### ***Health Surveillance for Environmental Factors***

In FY2016, staff provided risk assessment support and responded to a diversity of inquiries concerning potential health hazards. These inquiries included questions regarding heavy metals (mercury, lead, and arsenic), pesticides, indoor and outdoor air pollutants, and illnesses potentially related to the environment. DOH continued integration of environmental and health effects datasets used to track disease related to environmental pollution factors during normal and emergency response conditions. Data sharing from formal health surveillance systems for both environmental pollutants and infectious diseases was further automated using multiple funding sources, including the ERRF. A description of the Department's health surveillance system in 2007 is at: <http://hawaii.gov/health/about/legrpts2007/> in a report under HCR 76, HD 1, 2006. Using ERRF funding, the HEER Office continued its actions to electronically acquire, manage, and analyze environmental surveillance data received from physicians and laboratories.

#### ***The CDC Adult Blood Lead Epidemiology and Surveillance (ABLES) Reporting Interagency Agreement***

Since 2008, the HEER Office has participated in the Adult Blood Lead Epidemiology and Surveillance program (ABLES) funded by the U.S. Centers for Disease Control and Prevention. Unfortunately, funding for the nationwide program was discontinued in FY 2014. Despite the loss of the contract, Hawaii will continue to provide adult blood lead surveillance data to the ABLES program. Hawaii continues to have very few cases of elevated blood lead levels in adults.

#### ***Environmentally Related Illness and Injury Reporting and Surveillance (Pesticides and Heavy Metals)***

Under the authority of Section 321-311, HRS, Environmentally-Related Illness and Injury Surveillance, the HEER Office is required to collect information on Pesticide and Heavy Metal Poisoning.

A group of pesticide and heavy metal analytes were added to the Electronic Communicable Disease Reporting System (ECDRS) electronic data feed from clinical laboratories in Hawaii to the Department of Health (DOH), Disease Outbreak Control Division (DOCD) Disease Investigation Branch (DIB). Using the electronic results, HEER has been tracking children and adults with elevated lead levels. Educational materials have been provided to all physicians testing women of childbearing age for mercury.

For calendar year 2015, 14,189 children ( $\leq 6$  year old) were tested for blood lead levels. One hundred and twenty-six children had an elevated blood lead level between 5-9 ug/dl. Another 26 children had an elevated lead level of  $\geq 10$  ug/dl. The percentage of children with a lead level  $\geq 10$  ug/dl was 0.18% below the national level of 0.5%. Addresses of children with elevated lead levels have been provided to HUD funded programs in the City and County of Honolulu and Maui to ensure that landlords receiving state or federal rental subsidies comply with lead based paint requirements.

DOH recognizes the importance of identifying and managing cases of lead poisoning in Hawaii, especially after the Flint, Michigan crisis linked to leaching of lead from corrosive pipes. Since 2003, when CDC cut funding for Hawaii's childhood lead program, lead surveillance activities have been limited to responding to patient and physician requests for assistance. This year, the HEER office has purchased a web-based application, Consilience Software Inc.'s Maven, to coordinate and enhance surveillance of lead poisoning in Hawaii. The new application will allow for active identification and management of lead poisoning cases in Hawaii. Cross training across DOH programs including Public Health Nursing Branch, Children with Special Health Needs Branch and the Indoor and Radiological Health Branch will ensure that children and adults with elevated lead levels will get the management and assistance needed to reduce the overall lead burden in Hawaii.

#### ***HEER Addresses Statewide Pesticide Concerns***

In response to ongoing community concerns as well as recommendations made by the Kauai Joint Fact Finding Group, the DOH and Hawaii Department of Agriculture (DOA), in partnership with other state and federal agencies, have launched three key statewide pesticide initiatives that can be accomplished in the next 12 months.

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

### *Environmental Sampling*

**Surface Water Sampling-** To expand upon the 2013-14 DOH/DOA surface water study, DOA has signed a Memorandum of Understanding with United States Geological Survey (USGS) for a \$500,000 surface water quality study. Surface water on Oahu and Kauai will be sampled for pesticides before and during storm events to evaluate whether pesticides are moving offsite at unacceptable levels. Different land uses including urban, rural, and agricultural uses will be evaluated. Interim results will be released after the first year of the project.

**Air and Dust Sampling** DOH and DOA recognize that airborne dust and pesticide drift are important community concerns. A pilot study conducted by the University of Hawaii and reported in 2013, did not find pesticides in the air next to seed corn operations at health levels of concern. The Agency for Toxic Substances and Disease Registry (ATSDR) has recently weighed in on this issue. In their response to a citizen's request for a public health assessment, ATSDR concluded that environmental air monitoring is unable to accurately define the extent of a community's exposure to agricultural pesticides due to application variables and weather. Because of the complexity of the issue and the difficulty in gathering definitive data, the State is currently seeking recommendations from the US Environmental Protection Agency (EPA) on how to address community air concerns.

### *Emergency Response Exercises and Training for Pesticides*

The state recognizes that effective interagency response to emergencies begins with preparedness. Strong internal and external working relationships will help to ensure public trust and promote an effective interagency response in the event of a high-level pesticide incident. To strengthen and build upon existing relationships and enhance preparedness, DOA and DOH are planning a statewide pesticide exercise through the Hawaii State Emergency Response Commission with other organizations including with the Fire Department/HAZMAT/EMS, Department of Education (DOE), Hawaii Occupational Safety and Health (HIOSH) and county representatives. A proposed scenario involves a pesticide exposure at a school which will include environmental, community and medical response planning, including DOH's Emergency Medical Services and Injury Prevention System Branch. In September, 2016, a proposal for workshops and table top exercises in each county was presented to the Hawaii State Environmental Response Commission.

### *Public Health Education and Outreach*

**Acute Pesticide Exposure** DOH and EPA support clinician training for acute pesticide exposure to improve outcomes in local communities. EPA has contracted with the nonprofit Migrant Clinicians Network to provide clinical training for acute pesticide recognition and management at Kauai Veterans Memorial Hospital. DOH is assisting EPA with outreach and logistics for the trainings.

### **Symposium on Children's Environmental Health**

Planning is currently underway to host a Symposium on Children's Environmental Health for health care providers in Honolulu in March, 2017. DOH is collaborating with experts at the Pediatric Environmental Health Specialty Unit (PEHSU), and John A. Burns School of Medicine, Department of Pediatrics for this event. Guest speakers from UCSF and UC Berkeley will present current research on pediatric environmental health issues including pesticides. Funding is provided by EPA grants to PEHSU and the DOH State Response Program.

**Hawaii Poison Center (HPC)** The HPC operates a 24/7 hotline to assist residents and health care providers. DOH receives data from the HPC on the number and types of acute pesticide poisonings. The HPC is mandated by legislation and is under the auspices of the Hawaii State Emergency Medical Services and Injury Prevention System Branch. Annually, the center receives over 9,000 information and poisoning exposure calls from residents and health care providers throughout the state. Services are provided free of charge every day of the year, 24 hours a day by registered nurse specialists, pharmacists, and physicians specially trained in medical toxicology. The center is operated by the Rocky Mountain Poison Center, Denver, Colorado, an accredited regional poison center by the American Association of Poison Control Centers (AAPCC). The HPC toll-free number is 800-222-1222. DOH is working with HPC to offer Hawaii-specific information on how to report and respond to pesticide exposure for consumers

### **Pesticide Poisoning Prevention Services for Households**

Because the vast majority of pesticide exposures reported to Poison Centers nationwide and the Hawaii Poison Center occur in the home, DOA will re-start their "Pesticide Poisoning Prevention Services for Households" outreach program to educate families and communities about how to better protect their children and how to reach out for help in the event of potential exposures.

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

**EMS/Physician Training on Hazardous Chemicals** Alvin C. Bronstein, MD, DOH EMS & Injury Branch Chief and former Director of the Rocky Mountain Poison Center, held an EMS/Physician Training on Hazardous Chemicals in partnership with Kapiolani Community College and the Louisiana Poison Center that was attended by 40 people, representing all islands. Additional pesticide-specific trainings for each of the counties are currently being developed/considered.

**Agency for Toxic Substances and Disease Registry (ATSDR)** DOH is conferring with the ATSDR on pesticide-related community health concerns raised on Kauai. In their recent response to a citizen request for a public health assessment ATSDR identified a need for education of the local health care community, and have offered to provide assistance.

**Birth defects** Director Pressler and her staff traveled to Kauai in August, 2016 to meet with west-side physicians to investigate discrepancies they have identified in the birth defects registry report. The birth defects surveillance system in Hawaii is an active surveillance system in which birth defects data are directly abstracted from medical records at hospitals and other medical facilities statewide. Direct reports from doctors are also accepted, and can be an important way to ensure all birth defects cases are recognized and entered.

Work done to date by the HEER Office on pesticide concerns can be found at:

<http://eha-web.doh.hawaii.gov/eha-cma/Leaders/HEER/pesticides>

Blank Page

**Site Discovery, Assessment, and Remediation  
Cleanup Highlights**

***Reclaiming Contaminated Properties***

The HEER Office continues to prioritize its operations to focus resources on major threats to human health and the environment. For FY2016, the HEER Office accomplished its primary mission with a focus on discovery and oversight of assessment and cleanup activities on high and medium priority sites across the Hawaiian Islands, including privately owned, municipal, and state owned properties and, federal military sites. Oversight of low priority sites continues to be curtailed due to staff shortages and budget constraints.

***Sites Evaluated for Removal and Remedial Action***

Property owners, responsible parties, and prospective purchasers regularly contact the HEER Office to report releases of hazardous substances, pollutants or contaminants as required by HRS 128D, or wishing to assess and manage hazardous substances, pollutants or contamination affecting properties in which they have an interest.

Our general and federally funded state remedial project managers (RPMs) evaluate information provided, and direct additional investigation as needed to understand the nature and extent of contamination, and identify hazards requiring remedial action to protect human health and the surrounding environment. To date, 1,244 state sites have been identified and investigated by the SDAR section. Of these, 313 sites have been fully cleaned up and have no ongoing oversight requirements and 199 sites have been closed with restrictions in place to protect human health and the environment. An additional 67 low priority sites are currently inactive, and are subject to reassessment prior to redevelopment or land use change.

65 new sites were added in 2016 due to both active site discovery efforts and statewide redevelopment activities. 505 state sites remain open at the end of FY2016 under active oversight and are being assessed for future action.

***Responsible Party Participation***

Like the federal Superfund law, HRS 128D requires responsible parties and property owners to investigate and clean up contamination under regulatory oversight. Where needed, the HEER Office has authority to issue orders to require investigation and cleanup of properties that may pose an imminent threat to human health or the environment. ERRF funds may be expended to

complete cleanup activities if the responsible party fails to do so.

In practice, the State Response Program works cooperatively with responsible parties and property owners, identifying potential hazards and directing investigation and cleanup activities. Clearly, this tested partnership approach results in more successful and timely cleanups, while conserving fund monies. In 2016, Responsible Parties conducted the vast majority of investigation and cleanup actions on a voluntary basis, without a formal cleanup agreement in place.

A limited number of cleanup actions were conducted under one of three types of regulatory agreements with the HEER Office, described below.

***Voluntary Response Program Key Oversight***

The Voluntary Response Program (VRP) encourages voluntary cleanup of contaminated properties, and includes a cost recovery mechanism to offset HEER oversight costs. Under Chapter 128D, HRS, DOH has the authority to grant prospective purchasers or developers an exemption from future liability if cleanup is performed to DOH specifications under the program.

Past, current or future property owners can participate in this program, but exemptions from liability can only be given to future purchasers or tenants. Completion of the voluntary cleanup action is accompanied by a Letter of Completion (LOC) issued by the Department of Health and noted on the property deed. To date, 32 contaminated properties have been enrolled in the VRP program. Of these, DOH has issued 27 LOCs for 25 sites, closed one site with a No Further Action (NFA) determination without liability relief, and seen three sites withdraw from the program.

Today, there are four active VRP sites in the program. No new applications were received in FY2016. Responsible parties with sites participating in the VRP pay the state for DOH oversight of their remedial activities.

Remedial actions are complete and LOCs have been issued at three other VRP sites. These include Lowe's Iwilei, Costco Maui Gas Station, and Honolulu Wood Treatment.

***Fast Track Decisions***

The HEER Office Fast Track Cleanup process provides a streamlined approach for property owners to conduct protective, independent cleanups of low and medium priority sites, and improve Hawaii's ability to focus on more serious and complex releases. The program includes cost recovery, providing necessary funding for

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

the HEER Office to provide priority oversight for sites that pose low environmental risks. Forms and information on Fast Track Cleanups (FTC) designed to enable landowners or other private parties to conduct a voluntary investigation or cleanup under a simple agreement with the HEER Office are located at:

[http://eha-web.doh.hawaii.gov/eha-cma/Leaders/HEER/Fast%20Track%20Cleanup%20\(FTC\)%20Information](http://eha-web.doh.hawaii.gov/eha-cma/Leaders/HEER/Fast%20Track%20Cleanup%20(FTC)%20Information)

### **Site Discovery Program**

Discovery of historically contaminated sites that may pose a threat to current or future users is an important focus area for the HEER Office. HEER Office uses federal funding to locate and sample properties that may have invisible contamination that could cause harm, particularly in the event of residential redevelopment.

The HEER Office continues to focus on historic pesticide mixing, storage, and loading areas from both sugar cane and pineapple operations.

Since 2007, the HEER Office has discovered, investigated and completed site screenings on 71 sites statewide through the Site Discovery program. Site Discovery identified no hazards present, meaning no elevated contaminant concentrations detected, at 28 of the sites evaluated. Six sites have completed investigation, remedy selection, and have controls in place.

Fourteen sites have residual contamination present that requires use restrictions, safe management and further investigation before redevelopment can occur.

### **Shifting to a Proactive Approach to Historic Contamination**

Our State Cleanup Law, HRS 128D, modeled after federal Superfund Law, was established to respond to the discovery and reporting of releases of hazardous substances, and to take regulatory action to protect human health and the environment from contaminants. One of the biggest challenges we face in the HEER Office is that a significant majority of these newly reported releases are the result of historic industrial and fuel handling activities, and tend to occur most frequently in concentrated areas with known areawide contamination, such as industrial centers, harbors, airports, pipeline corridors and historic chemical use and storage facilities. Managing sites individually as releases are reported means that HEER often finds out *after* a problem or release issue has occurred. In response to this issue, the HEER Office has begun to adopt a broad, proactive strategy to address the discovery, interim management

and remediation of sites statewide. The strategy consists of three components:

1. Programmatic/Areawide Environmental Hazard Management Plans
2. Extensive Public Outreach & Material Development
3. Site and Document tracking by the public via iHEER

The combination of these three components allows the HEER Office to address potential sites before they become issues by providing the public at-large with as much information and guidance as possible about potential hazards *before* a release occurs. It also provides consistent, publicly available information about areawide contamination concerns that property owners, tenants, developers and prospective purchasers can use to learn about the HEER Office. This enables HEER to maintain its services to the public despite budget cuts and lack of personnel. Here is a brief description of the three components:

### **Programmatic/Areawide Environmental Hazard Management Plans (EHMP):**

Areawide EHMPs are used primarily to address areas where 1) the type of contamination is known through several site-specific investigations in the area and 2) the contingency plans for handling the type of contamination in question is well defined. By providing information regarding management of the various media (soil, groundwater, soil gas) up front, all entities performing intrusive work in the area will be prepared and equipped to manage any hazard they may encounter. This also provides better worker safety and reduces the number of incidents that our emergency responders have to address.

### **Extensive Public Outreach & Material Development:**

As there is limited landfill space in Hawaii, and no on-island hazardous waste disposal, risk-based closures are used at many sites. This approach cuts off pathways to exposure, while leaving contamination in place that needs to be managed through either a combination of engineering controls (e.g.-cap) and/or institutional controls (e.g.- land zoning, EHMP) for the foreseeable future. In order for these controls to remain effective over time, public outreach to all affected parties (utilities, lenders, State departments, etc.) is required to educate and reinforce what needs to be done to maintain site

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

safety. Meeting with the various stakeholders annually allows the HEER Office to get its safety message out consistently and frequently. HEER Office outreach materials for the various types of contamination (UXO, arsenic, petroleum) on sites are developed and regularly updated keep these important messages fresh in the minds of the public.

### ***Site and Document tracking by the public via iHEER:***

The HEER Office is continuing to design and optimize the iHEER system so that Site and Document tracking can be accessed by the public. The primary focus of iHEER has been to allow facile access to public records while creating enough safeguards to protect confidentiality and open investigations. It is anticipated that public records will be accessible after the data migrated over to iHEER has been screened to protect confidentiality.

### ***Honolulu Rail Transit Project***

As drivers along H-1 see every day on their morning commutes, the rail project is becoming a reality. The Honolulu Rail Transit Project (H RTP) guideways are springing up across the landscape and pre-construction activities are occurring all along the route. The HEER Office maintains close regulatory oversight of the H RTP to ensure any contamination encountered during construction is managed safely, efficiently and in accordance with state law.

The H RTP includes construction of 21 rail stations, installation of hundreds of columns to support 20 miles of elevated guide ways, extensive utility relocations, a large rail car maintenance and storage facility, and several park and rides.

Construction continues to occur within large areas of known and potential subsurface contamination from a variety of historic activities. Safe management requires proactive, advanced planning before ground can be broken, and close, ongoing coordination with multiple construction teams on the ground. Data-sharing between HART, the HEER Office, multiple state agencies, and the public is also crucial to the project's success, but is complicated by the project complexity. In FY2015, we reported on progress with the Programmatic Environmental Hazard Evaluation (EHE) and Environmental Hazard Management Plan (EHMP), improved data-sharing between the Honolulu Authority for Rapid Transportation (HART) and the HEER Office, and HEER web page that shares information about the rail project to the public (Link: <http://eha-web.doh.hawaii.gov/eha-cma/Leaders/HEER/HEER-Office-Partners-with-Solid-and-Hazardous-Waste-Branch-to-Oversee-Honolulu-Rail-Transit-Project> ). These aspects of the project continue to evolve and improve in FY2016.

In Fall 2015, the HEER Office partnered with HART and HART contractors to give a presentation at the Hawaii Geographic Information Coordinating Council annual conference. The presentation focused on using Arc GIS Online (AGOL) to share information across agencies and within organizations. HART has an (AGOL) license that they use to identify areas of contamination and create maps for contractors who will be working in that area. The HEER Office part of the presentation focused on how HDOH/HART coordination on these issues has evolved over time, and how using AGOL has made communication with HART and the public easier.

**FIVE KEY EHA ENVIRONMENTAL PROGRAMS**

---

***Amazing Transition –  
Rail Operations Center at the Former Ewa Junction Fuel Drumming Facility under Construction in 2013***

***Rail Operations Center 2015***

***Rail Operations Center 2015***

The HEER Office presentation also displayed the interactive map the public can access to find information about contamination along the rail corridor. The map was created last year and embedded on the HEER website.

The HEER Office continues to work with HART to identify contaminated properties and mitigate contamination before construction occurs. Since HEER Office involvement with the project in 2011, one such property is the former Ewa Junction Fuel Drumming Facility. This property was the site of a 315,000 – gallon fuel release in March 1971. Since then it has undergone multiple characterization and removal actions. In spite of this, after its use as a fueling facility, the site remained fallow until HART acquired the property. In 2012 and 2013. HART wrote a site-specific EHMP, and completed several sampling events to ensure the site was safe for its future use as a maintenance yard. Extreme grading and

construction operations took place once the site was deemed safe. This year, the HEER Office attended a ceremony at the newly constructed Rail Operations Center and was pleased to see that the beneficial reuse of this site is imminent.

Additionally, HART investigated and closed two gas station sites in preparation for construction of the Kalihi rail station, and one gas station in advance of construction of the Lagoon Station. HART is also investigating and preparing for a removal action at the Al Phillips site that will comprise part of the Lagoon Station.

The HEER Office and HART are also working with the EPA to incorporate green remediation and green construction protocols into the project. These protocols will benefit Hawaii by minimizing waste and energy consumption, which often leads to cost savings.

*Rail Operations Center 2015*

***Widespread Unexploded Ordnance (UXO) Issues Throughout the State***

The HEER Office mission is to protect human health and the environment and UXO has become one of the main contaminants of concern to be targeted. Over the past decade, several Formerly Used Defense Site (FUDS) UXO investigations have taken place throughout the State, highlighting the number and severity of the UXO problem. Many of the areas being investigated are high-traffic areas by the public (Maunawili Trail, Hapuna Beach, Goat Island, Ahii Kinau, etc.) and as there is no way to guarantee 100% clearance of a UXO site, these sites present a potential danger to the public-at-large. Due to this threat, the HEER Office has actively engaged in public outreach in the affected communities and with State and local authorities to inform the people of the

hazards UXO pose. To assist with the public outreach effort, the HEER Office is partnering with Federal, State and local entities to design signage that incorporates historic, cultural, and safety messages at high profile public venues like Hapuna Beach.

In addition to continued public outreach, the HEER Office has developed an areawide UXO EHMP for the Waikoloa Maneuver Area as a pilot test. If successful, areawide EHMPs will be designed and implemented at other FUDS to ensure protectiveness for the public and environment after site remediation has occurred.

The HEER Office will be investing time and resources into enhancing and developing its expertise in handling UXO sites independent of the work done by the US Army Corps of Engineers. In doing so, the HEER Office can start

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

to address low priority/low risk sites that the USACE will not address in the foreseeable future, allowing for re-development or re-use. By bringing in experts from across the country to train and educate HEER staff, the hope is that the HEER Office will acquire the competency necessary to address the UXO issue properly.

### ***Re-development of Various Properties Across the State***

Land re-use and re-development is critical when living on an island and in order to facilitate that, the HEER Office has dedicated its time and resources to assist private parties in their endeavors. The most recent projects that have been completed or are close to completion include but are not limited to Symphony Park, International Marketplace, and the Honolulu Advertiser Building. In addition to these projects, the HEER Office has assisted the City and County of Honolulu in researching potential parcels for use as transitional housing.

The HEER Office has had a long standing relationship with DBEDT and continues to assist DHHL, DOT, DOE, and other State departments in providing guidance and oversight for their projects (e.g.- Voice of America, Kapalama Container Yard, Radford High School). The HEER Office strives to assist its fellow State Departments in ensuring the safety of the sites and designing long term remedies that allow for potential re-use/re-development.

### ***High Priority State Sites***

A key role of the HEER Office is to identify sites where current or projected exposures to hazardous chemicals could pose a threat to public health or the environment. These sites receive high priority designations. In 2016 there were 69 high priority sites in the Hawaii State Response Program. Examples of major progress on high priority sites are described below:

#### ***Radford High School Track & Field***

The track and field remediation was completed in 2015 and the Remediation Verification Report for the Time Critical Removal Action was submitted to the HEER Office at the beginning of FY2016. The HEER Office is working with DOE to develop EHMPs for both Radford High School and Makalapa Elementary School to ensure protectiveness of students and faculty on those respective campuses. A Remedial Investigation on the Makalapa campus by the US Army Corps of Engineers to determine the nature and extent of the buried debris is slated for December of 2016.

### ***Iwilei Areawide Contamination***

Because of extensive historic petroleum contamination in subsurface soils dating back to territorial days, Honolulu Harbor remains one of HEER's top priorities. Work is underway at a number of high priority sites, including:

#### ***BHP GASCO Benzene Site/Dole Cannery Building Site, Oahu***

Discussions on re-development of the site that are consistent with the remedy in place have begun and suitable buyers are being screened. In addition to the Soil Vapor Extractor (SVE) on the Gasco site, a second dedicated SVE was constructed to address soil vapor concerns in the Dole Cannery Building. Pilot tests showed that SVE is effective in reducing vapor intrusion into the building. A Remedial Alternatives Analysis and Response Action Memorandum for the Dole Cannery Building is slated for 2017. Endpoint/ exit strategy discussions on the Gasco site are also slated for the end of 2017.

#### ***VRP Projects on the former Conoco Phillips Petroleum Terminal***

Lowe's entered into the Voluntary Response Program (VRP) to remediate and redevelop the former Conoco Phillips terminal property in Iwilei. Lowe's elected to investigate and clean up the property in two parts, as discussed below:

#### ***Lowe's Iwilei Letter of Completion***

The Lowe's VRP site officially received its Letter of Completion in early 2016. This marks the end of active remediation on the site and has placed it in long term management mode. Barring a discovery of a new release, the site will be reduced in priority in FY2017 and will no longer be on the high priority list.

The long term safety of the property will be ensured by the continued implementation of the site specific EHMP for the property. In addition, as a condition of the VRP agreement, a covenant was placed on the property in 2016.

#### ***Brewer Environmental Industries (BEI)***

Site characterization activities have been completed on the BEI site but as BEI has no intention of ending its lease with Lowe's, the site has been placed in long term management until the lease expires. Chevron has been tasked with drafting an exit strategy that outlines all of the work that has already been completed and what actions need to be done once BEI vacates the property. As BEI is an active facility, monitoring wells that are not

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

in use have been sealed off to prevent potential pathways to the groundwater.

### ***Iwilei District Participating Parties (IDPP) Enforceable Agreement for Areawide Contamination***

The Iwilei District Participating Parties (IDPP), LLC, has completed intensive investigation and early cleanup actions for their areas of responsibility in Honolulu Harbor. Public participation and remedy selection is now complete for all major Operable Units (OU).

IDPP continues to implement the remedies and response actions approved by DOH to manage residual petroleum contamination in subsurface soils. These include free product removal, infrastructure repairs and a variety of institutional and engineering controls required to ensure long-term protectiveness of the remedies for future generations and the nearby marine environment.

As all of the OUs are in long-term management, the following ongoing activities are being done to ensure the protectiveness of the remedies selected.

- Site-specific EHMP implementation for investigated areas and Areawide EHMP implementation on areas where no investigation has taken place.
- Partnership with DOT to provide guidance for new tenants as they perform intrusive activities near any of the OUs
- Continued outreach to affected stakeholders. In order to reach tenants, utilities and property owners planning excavation activities within IDPP Hazard Management Areas, IDPP is conducting multiple outreach meetings to provide guidance and direct construction support for safe management of contaminated materials. The presentation materials include standard operating procedures for safe management of petroleum impacted soils during construction activities, including excavations, dewatering, soil disposal or re-use, and worker protection.

### ***Continued oversight of Federal Facilities on the National Priorities' List (Pearl Harbor Naval Complex & NCTAMS)***

#### ***Pearl Harbor Sediments***

The feasibility study (FS) (2015) involved additional sampling/data gathering to further define the extent of sediments that may require remediation, assess recontamination/ natural recovery potential/the need for source control, and evaluate alternatives for remedial action. The feasibility study recommendations were:

SE-1 (Southeast Loch) - Focused Dredging with Enhanced Natural Recovery (ENR), Activated Carbon (AC), and Monitored Natural Recovery (MNR) (20 years)

N-2 (Oscar 1 and 2 Piers Shoreline) - ENR with MNR (10 years)

N-3 (Off Ford Island Landfill and Camel Refurbishing Area) - ENR

N-4 (Bishop Point) - ENR

E-2 (Off Waiau Power Plant) - Focused Dredging with MNR (10 years)

E-3 (Aiea Bay) - MNR (10 Years)

A Basis of Design Tier II Work Plan (June 2016) has been drafted and is currently under review. The field investigation objectives are to obtain the data required to complete the design of the selected remedial alternatives as presented in the FS (2015), and to provide additional harbor-wide baseline fish tissue data to evaluate long-term fish monitoring recommendations for the site.

#### ***Aiea Laundry:***

2016 Final Remedial Investigation/Feasibility Study (RI/FS) – The 2007 to 2014 Remedial Investigation/Feasibility Study was conducted to fill data gaps following the previous 1996-1997 Remedial Investigation and the 2002 Remedial Investigation/Feasibility Study. The decades-long investigation has focused on four principal investigation areas:

Former Aiea Laundry Facility area (i.e., the “Laundry Area”): a paved 1.25-acre parcel that was the location of a former Navy laundry,

St. Elizabeth Church and School property, which borders the Laundry Area to the north

Backyard Area, a 2-acre partly paved, partly grassy Navy-owned open lot bordering the Laundry Area to the northeast

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

Nearshore Area/Intertidal Zone along Pearl Harbor's Aiea Bay shoreline, a mostly open-space area approximately 1,300 feet southwest of the Laundry Area

The Laundry Area is currently used as a parking lot by the St. Elizabeth Church and School, which is an active institution. The Backyard Area is currently unused, and the Nearshore Area/Intertidal Zone is used for recreation.

Analytical results of soil sampling at the Laundry Area and Backyard Area and surface water sampling in Aiea Bay indicated no exceedance of screening criteria.

Groundwater and seep water Contaminants of Potential Concern (COPC) concentrations at the Laundry Area and downgradient areas have decreased since the first round of sampling conducted for the Remedial Investigation in 2007. Based on the most recent data collected in November 2014, only one well (in the Laundry Area) contained a COPC (vinyl chloride [VC]) concentration exceeding its respective screening criterion, and significantly fewer COPCs were detected above laboratory reporting limits compared to results from 2007–2008. Surface water samples collected from Aiea Bay indicated no exceedance of screening criteria. These results suggest that the dissolved-phase Chlorinated Volatile Organic Compound (CVOC) plume is no longer present at concentrations exceeding project screening criteria in areas located hydraulically downgradient of the Laundry Area. Due to the detection of VC in the one Laundry Area well, residual CVOC contamination is still likely present in groundwater at the source area. Results of the bioaugmentation Treatability Study indicated that conditions can be established in-situ that are suitable for complete biological degradation of the chlorinated organics at the source area and the downgradient plume.

Results of indoor and outdoor ambient air and soil vapor sampling in the Laundry Area, Backyard Area, and St. Elizabeth Church and School and the Soil Vapor Extraction (SVE) Treatability Study indicate that the current SVE system has provided some mitigation of vapor-phase CVOCs; however, vapor intrusion pathways are intermittently complete at St. Elizabeth Church and School, and elevated CVOC concentrations are present in soil vapor along the fence bordering the Church's Rectory building and around one well in the Backyard Area. Based on soil vapor samples collected between 2009 and 2011, elevated CVOC concentrations may also still be present in soil vapor beneath the northwest part of the parking lot. Results of near-surface soil vapor sampling for the offsite soil vapor survey west of St. Elizabeth School indicated the presence of perchloroethylene (PCE) in four of the 18 samples, but at concentrations well below the screening criterion and not indicative of a significant PCE soil vapor presence in the area.

CVOC concentrations exceeding the project screening criteria were detected in groundwater and soil vapor at the Laundry Area and in soil vapor at the Backyard Area. The ecological risk assessment determined that the CVOC concentrations in groundwater pose no ecological risk. Since groundwater at the site has been designated as non-potable by the State of Hawaii DOH with EPA concurrence, the Human Health Risk Assessment (HHRA) did not identify any unacceptable risk to current or reasonably anticipated future receptors; therefore, remedial actions for groundwater are not necessary for protection of human health and the environment. Consequently, groundwater is not a medium of concern and is not addressed in the Feasibility Study. However, because monitored natural attenuation (MNA) has been demonstrated to be effective to reduce the CVOC concentrations in groundwater at the site and the MNA processes are expected to continue, groundwater monitoring will be conducted periodically to confirm that the reduction in CVOC concentration continues.

The HHRA results indicate that the soil vapor at the site currently does not pose an unacceptable risk to workers and visitors of the Church and Rectory, but does indicate potentially unacceptable risk to a future hypothetical residential scenario should vapor intrusion occur. Because the soil vapor risk is currently mitigated by operation of the SVE system, it is anticipated that the HHRA would have resulted in elevated risk in other scenarios and thus would require further evaluation if the SVE system was not operating. Therefore, further action was recommended to address soil vapor at the Laundry Area and the Backyard Area.

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

Five remedial action alternatives were evaluated in the Feasibility Study and the preferred remedial alternative for remediation of soil vapor contamination at the site is Targeted Soil Vapor Extraction, Monitoring, and Land Use Controls. The Feasibility Study is being finalized.

The Proposed Plan meeting is tentatively scheduled for early 2017.

***East Gulch Disposal Area, NCTAMS PAC 2015 Action Memorandum to document for the Administrative Record (AR) the decision by the United States (U.S.) Department of the Navy (Navy), Naval Facilities Engineering Command, Hawaii, to undertake a time-critical removal action (TCRA) to address debris and contaminated soil observed on the mid-to-upper slopes of the East Gulch. Prior to conducting an RI, debris removal is required to allow access to soils beneath the debris on the gulch slope.***

2016 TCRA - Vegetation and debris were cleared on the slopes prior to collecting soil samples. Spider excavators were used for this effort on the steep slopes. Incremental Sampling Method (ISM) confirmation sampling results showed no exceedances and a No Further Action was recommended. As of this writing, site restoration is being conducted.

### ***State Oversight of Military Munitions Response Program Sites (MMRP)***

The MMRP was created in 2001 and involved all branches of the military creating an inventory of formerly used/closed ranges across the country and its territories. These sites were put into the CERCLA process and are currently being addressed by the respective branches. Sites on properties that are no longer under the control of DoD and were transferred prior to October 17, 1986 are handled by the US Army Corps of Engineers under the Formerly Used Defense Site Program (FUDS). The majority of the MMRP sites currently under investigation in the State are part of the FUDS program (37 active projects). The most prominent of those sites are listed below:

### ***Waikoloa Maneuver Area***

As the largest FUDS in the entire nation (120,000 acres), the Waikoloa Maneuver Area receives \$10M a year to its remediation and cleanup. The projected cost to complete this project is over \$700M and will take approximately 50 years to complete. It is divided into 22 areas and each area is prioritized via MRSPP scoring system to determine which areas present the greatest risk. DHHL properties within the FUDS areas have been

prioritized to ensure the safety of nearby residents. To date, roughly 22,000 acres have been remediated with about 2,200 UXO items being discovered and removed. In addition to the remedial work being performed the HEER Office partners with the US Army Corps to do public outreach events throughout the FUDS.

### ***Pacific Jungle Combat Training Center***

Located in both Kanahena and Punaluu valleys, this FUDS went through a remedial investigation and feasibility study to determine the best course of action to address the area and keep users of the area safe. As there are significant cultural and receptor (e.g.-hunters) concerns in the area, the HEER Office and US Army Corps are working with the landowners to ensure that an appropriate and protective remedy is selected.

### ***Multiple Army MMRP Sites on Various Installations***

The HEER Office has provided oversight for 55 MMRP sites on various Army Installations (Fort Shafter, Schofield Barracks, Wheeler Army Airfield, Makua Military Reservation, and Waikakalaua Ammo Storage Tunnels) since the creation of the program and has completed the majority of the investigations in under 20 years, which is unprecedented. Although MMRP sites cannot reach unrestricted closure, these sites have been investigated, remediated, and placed in long term management.

### ***Development of Other Programmatic Approaches to Managing Areawide Contamination Across the State***

In addition to the Iwilei Areawide EHMP, new Areawide EHMPs have been developed in areas on the Big Island and Maui. A draft of the Kahului Harbor EHMP was completed in May 2016 with a finalized version to be completed by November 2016. A draft Waikoloa Maneuver Area EHMP has been reviewed by the US Army Corps of Engineers and it is scheduled to be released for public input at the UXO Forum being held on November 30, 2016. Other areas such as Hilo Harbor are being looked into to determine if an areawide EHMP is appropriate to address widespread contamination.

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

### ***Petroleum Oil Terminal Environmental Hazard Management Plans (EHMPs)***

Documentation of historic oil contamination in soil and/or groundwater is common at the existing petroleum oil terminal distribution sites in the state's harbors. The HEER Office first started planning for greater oversight and establishment of facility-specific EHMPs for oil terminals in the state several years ago, starting with the Chevron oil terminals located in Honolulu, Hilo, Kahului, and Port Allen harbor areas. Interim Final or Interim Draft EHMPs have been completed for the Chevron oil terminals during the 2015 and 2016 fiscal years. Because these are working facilities and evaluation of all areas of these sites is not generally feasible due to existing infrastructure and operations, these EHMPs are considered "Interim", and will be periodically updated over time as new information or access to new areas for evaluation may become available. Aloha Petroleum has now also committed to a plan to complete EHMPs for their oil terminal distribution sites in the state over the next two years. The EHMPs serve as comprehensive summaries of all known soil and/or groundwater contamination issues at the terminal sites and provide details on plans for cleanup or management of oil contamination known. The EHMPs also provide an analysis of existing data gaps to be addressed in the future or as opportunity may allow.

### ***Industrial Harbor Areas and Hazard Characterization/ Pollution Pathways Data Compilation and Mapping***

In FY 2016, the HEER Office worked on the development of a database summary and GIS mapping initiative focused on industrial harbor areas. The goal of this project is to provide a useful management and planning tool that addresses Known/historic contamination details, the presence of large chemical storage tanks and transport pipelines, as well as various potential pathways for spilled or leaked chemical to travel "offsite" from facilities or to the ocean. Kahului Harbor was chosen to develop a model that could then be applied to the other harbors in the state. The initial Kahului Harbor data summaries and maps were completed, and they will be further refined and amended as the HEER Office utilizes this resource and additional information becomes available. This information will also provide important support for the development and targeting of areawide EHMPs within the harbor areas. The EHMPs will in turn provide environmental hazard and planning information for utility companies and others who may be digging in public rights-of-way or on private easements in the harbors and encounter contaminated soils or groundwater.

### ***Brownfield Success Story: Cleanup Completed in FY2016 for the Former Kohala Sugar Company Pesticide Mixing Site***

The former Kohala Sugar Company Pesticide Mixing Area supported historic sugarcane production operations in the Kohala District of Hawaii Island. The company closed operations in 1975. Soil at the former pesticide mixing area presumably became contaminated as a result of chemical spills, mixture runoff, and rinse water discharge over many years of pesticide mixing and loading. Arsenic and dioxin contamination was present in areas of about one quarter of an acre to a depth of up to 10 feet below ground surface.

The pesticide mixing site is on a larger parcel owned by the non-profit Hawaii Community Development Corporation (HICDC) which is developing single family affordable housing units. Unfortunately, the pesticide mixing area located in a gully on one edge of the property was not discovered during HICDC's due diligence to purchase the property.

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

After gathering and addressing public input on a proposed remedy for the contaminated soils, the HEER Office approved a final cleanup action plan for the pesticide storage/mixing site located near Hawi town. The approved cleanup plan called for excavation of all contaminated soils above relevant DOH environmental action levels and disposal at the West Hawaii sanitary landfill. A detailed work implementation plan was approved by the HEER Office in June 2015, and 2,685 tons of contaminated soil was removed from the site and placed in the West Hawaii landfill by May 2016. This site received brownfield funding for the initial soil investigation, and HICDC utilized a substantial loan from the Hawaii Brownfield Revolving Loan Fund to complete the soil removal action.

**Above: Limits of Excavation in Deep Contaminated Area, April 2016**

**Above: Grass Stabilizing the Final Restored Site, June 2016**

The excavated site was filled with clean soil and restored with a grass cover by June 2016. HICDC will receive a "No Further Action" letter from the HEER Office for closure, and the site will be suitable for future unrestricted use, including residential development.

### ***Hawaii Brownfields Forum***

On September 22, 2015, the HEER Office in collaboration with U.S. EPA Region 9, City and County of Honolulu, and the Center for Creative Land Recycling (CCLR) hosted Hawaii's 7<sup>th</sup> Brownfields Forum, entitled *Supporting Development and Land Reuse around Honolulu's Rail Stations*". The Forum was created to encourage private owners, developers, and investors to redevelop brownfields properties around Honolulu Transit Oriented Development (TOD) by:

- Facilitating interaction and partnerships among diverse stakeholders
- Explaining regulatory requirements and the use of site assessment/cleanup tools
- Informing stakeholders of grants and other financial incentives
- Identifying obstacles and incentives to help further facilitate redevelopment

Over 160 attendees participated in the Forum, and more than 40 locations participated remotely in the webinar. This is the first forum with a live streaming component. Interested parties all over the State of Hawaii and across the USA participated. Interestingly, this forum drew a more diverse audience than previous Forums, with significant new participation associated with planned TOD rail stops, including local property owners and tenants, public development agencies, private developers, public interest groups, bankers, environmental consultants, and more. With the rail construction underway in Oahu, there was also considerable interest from affordable housing developers, who had not previously interacted with the HEER Office, and were not familiar with our regulatory programs or the unique challenges of redeveloping contaminated properties in Hawaii.

### ***Cleaning up in the Tropics***

Because conditions in Hawaii are so unique, pertinent cleanup guidance that reflects local realities and the best available science is essential to ensure that risks are identified and managed appropriately and efficiently in our island home. Hawaii leads the way with state-of-the-art investigation techniques to accurately assess contamination and reduce sampling costs.

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

### ***Policy and Guidance Development***

Because HRS 128D requires private parties to investigate and clean up contamination under State oversight, having clear, understandable guidance on rapid, protective and cost effective investigation and cleanup techniques is crucial. ERRF funded staff positions and expert consulting prepare state-of-the-art technical guidance for the investigation and cleanup of contaminated properties. The complete on-line Technical Guidance Manual is found at: <http://www.hawaiidoh.org>

### ***HEER Office Technical Guidance Manual (TGM) Updates***

Updates to the on-line HEER Office Technical Guidance Manual (TGM) which provides direction to environmental consultants and other interested parties on strategies and methods for assessment, remediation, and closure of chemical release sites continued in FY16. Major updates to Sections 3, 4, and 5 of the TGM covering Decision Unit and Multi-increment sampling strategies and methods for soil and sediment sampling were posted on-line for stakeholder review and comment in January 2016, and revisions and additional guidance based on comments received were made in subsequent months. The final Section updates were scheduled for posting online in the fall of 2016. In addition, a new TGM Section covering guidance for use of field screening instruments was also drafted, posted for public comment, and then prepared for final TGM posting in the fall of 2016. Plans were also made to work on updates to TGM Section 6 covering Groundwater Monitoring, as well as a new TGM Section on Environmental Risk Assessment for Nearshore Marine Environments in FY2017.

### ***HEER Office Presentations on Vapor Intrusion and Soil Sampling Strategies at a key Professional Conference***

Dr. Roger Brewer presented overviews of HEER Office guidance on "Facts and Fallacies of Petroleum Vapor Intrusion" and "Discrete Soil Sample Reliability" at the Tenth International Battelle environmental remediation conference in Palm Springs, California in May 2016. Audio recordings of the presentations were also posted on YouTube as a public information resource.

### ***HEER Office Participation in the Development of International Guidance***

The Interstate Technology and Regulatory Council (ITRC) is a public-private coalition working to reduce barriers to the use of innovative environmental technologies that reduce compliance costs and maximize cleanup efficacy. ITRC produces documents and training that broaden and deepen technical knowledge and expedite quality

regulatory decision-making while protecting human health and the environment. ITRC achieves its mission through its technical teams, which are composed of environmental professionals, including state and federal environmental regulators, federal agency representatives, industry experts, community stakeholders, and academia. Environmental professionals from around the world use the guidance and training developed by the ITRC.

In FY2016, the HEER Office provided a staff member to represent Hawaii as the State ITRC Engagement Program (SEP) Point of Contact (POC) and provided three staff to work with teams to develop new guidance and training. The SEP POC ensures Hawaii's guidance is considered when creating the ITRC products and works to make the free documents and training available to Hawaii's environmental professionals. This type of coordination helps incorporate Hawaii's research into international guidance and educates Hawaii's environmental community on cutting edge technologies used elsewhere.

Additionally, because Hawaii has developed a unique Environmental Hazard Evaluation and Environmental Hazard Management Plan (EHMP) process to link the policy with the implementation, a HEER Office staff member was invited to write an Institutional Control (IC) Management Template and Long-Term Stewardship Plan which will be a key part of the ITRC technical document about long-term contaminant management. She has also been working to develop a "tool" that will ask a user questions and use the answers to auto-generate a Long-term Stewardship (LTS) Plan that incorporates Hawaii's EHMP protocols. The tool will enhance an ITRC web-based document that will be available to an international audience of regulators and private sector people. The document and the tool began the review process this FY and will be finalized during FY2017. As the guidance document is completed, the team is beginning to develop training. Because of the HEER Office experience with EHMPs and the ITRC LTS Plan, the ITRC Team Advisor asked our staff member to help develop and present web-based training. This training will be finished and presented nationally in FY2017.

Hawaii's expertise with petroleum sites has also been tapped by the ITRC. Two HEER Office staff members are working with the ITRC to develop guidance pertaining to hazards to workers, residents, and the public at sites with total petroleum hydrocarbon (TPH) contamination. This team met for the first time in FY2016 and its objective is

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

to develop a comprehensive guidance on making scientific, risk-based decisions at petroleum-contaminated sites. The HEER Office staff members will work to incorporate Hawaii's existing research into the international technical guidance that will be finalized in 2018.

### ***Development of Ecological Risk Assessment Guidance for Hawai'i Coastal Environments***

In addition to a focus on human health, a primary goal of the HEER Office is to ensure that wildlife and the environment are protected from significant chemical hazards. Consequently, development of ecological risk assessment (ERA) guidance for chemical contamination in the near shore marine environment has been underway in recent years. In FY 2015, draft "screening level" ERA guidance was completed, and in FY 2016 associated draft "baseline" ERA guidance was completed. Plans are to present the Draft "Screening" and "Baseline" ERA guidance for thorough public review and comment in FY2017 before finalizing it, as well as host meetings or forums with target groups to discuss the new ERA guidance.

### ***Webinar Training Series Now Available on YouTube***

The HEER Office webinar series grew substantially in FY2016. Launched in 2015 to provide training to State, County and Federal Agencies and the environmental consultant community, this project is achieving its goal of developing a shared understanding of the latest scientific, technical, and policy development affecting cleanups in Hawaii. To date, we have hosted 11 training sessions on subjects from vapor intrusion guidance to the Iwilei District EMHP, to a simulcast of our well-attended Hawaii Brownfields Forum. Past webinars are available for viewing on our YouTube Channel (search *HEER Webinar Series*).

### ***Partnering in EPA Brownfields Grants and the Brownfields Cleanup Revolving Loan Fund (BCRLF) Opportunities***

Federal grant and loan opportunities can set the stage for successful redevelopment of distressed properties otherwise underutilized due to the uncertainties about the impacts of known or perceived historic contamination.

HEER works closely with US EPA and the Office of Planning at DBEDT to promote federal grant and loan funding opportunities and provide technical support to potential applicants. Information and links to Brownfields grants and funding opportunities is located at <http://eha-web.doh.hawaii.gov/eha-cma/Leaders/HEER/brownfields-redevelopment-program>.

Opportunities include individual and area-wide assessment and cleanup grants of up to \$200,000 for hazardous substances and \$200,000 for petroleum contamination, grants to cities and counties for Brownfield assessments and cleanup loans through DBEDT's Brownfield Revolving Loan Fund (BFRLF) of up to \$1.6 million. HEER Office provided technical assistance to the Hawaii Island Development Authority, aiding in the successful award of a \$560,000 loan from the BFRLF to cleanup a former pesticide mixing area located adjacent to their Kohala affordable housing project.

In FY2016, as a follow up to the \$400,000 Area wide Assessment Grant awarded to the Office of Hawaiian Affairs (OHA) in FY2013, HEER Office provided technical assistance to OHA to address historic preservation requirements and revise the Sampling and Analysis Plan for EPA approval. This study will allow OHA to address known contamination on the Kakaako parcel given to the agency as part of the 2013 state settlement on ceded lands.

The HEER Office provided technical assistance to City and County of Honolulu Transit Oriented Development during the procurement and selection of an environmental contractor to manage, administer and oversee the \$400,000 Brownfields Assessment Grant. Subsequently, HEER provided direct technical assistance to the selected contractor for development of the City and County Brownfields Inventory.

### ***Brownfield Revolving Loan Fund Award Sees Construction Completion at 2<sup>nd</sup> Large Housing Project***

Using a 2015 BFRLF award granted to the Hawaii Island Community Development Corporation, remedy construction was completed at a former pesticide mixing area located within a planned low-income residential community in North Kohala on the Big Island. Repayment of the loan to DBEDT will begin next year.

Previously, the BFRLF provided a \$1.6 million loan to Department of Hawaiian Homelands (DHHL) to successfully clean up a highly contaminated pesticide mixing area located within the East Kapolei residential development for native Hawaiians.

## FIVE KEY EHA ENVIRONMENTAL PROGRAMS

---

DOH is grateful for its partnership with DBEDT to identify potential projects, see the funds awarded and these cleanups completed.

### ***Supporting Redevelopment and Construction using Environmental Hazard Management Plans***

Given the economic recovery in Hawaii, development activities on brownfields sites continue to increase, with new cranes visible across Honolulu's skyline and active commercial and residential development across the island chain. In addition to receiving new sites into the state inventory, HEER works closely with property owners and developers to ensure construction activities that could disturb residual contamination on site are properly managed.

A useful tool has been the development of construction environmental hazard management plans (EHMPs) for proactively identifying and handling contaminated media that may be encountered during construction. Development of approved construction EHMPs for development sites has allowed remediation to occur concurrently with construction by ensuring early identification and safe management of contaminated materials encountered. Pre-planning for properly handling on-site and proper disposal of contaminated materials as part of the remedial process is essential to prevent costly delays and overruns.

### ***Intensive redevelopment in Kakaako and surrounding Ala Moana Shopping Center***

Since the mid-1900s, land use in Kakaako has been classified as mixed light-industrial. Due to the importing of fill material and historic industrial uses such as service stations, auto-repair and dry cleaning, pockets of contamination in soil, groundwater and soil vapor may be present throughout the area. The most common impacts are from petroleum, heavy metals and solvents. With many properties being redeveloped, contamination caused by these historic operations is being uncovered and needs to be evaluated to protect future users of the property.

The HEER Office continues to work closely with responsible parties that include developers and property owners in the Kakaako area to properly investigate, remediate and manage the contamination at several redevelopment sites.

### ***Community Involvement and Public Participation***

Contaminated properties occur throughout our communities on all our islands. While many of these sites are in industrial areas where the likelihood of harmful exposures to the community or the natural environment is low, many sites with less visible contamination occur in areas where people live, work, and play. Identifying potential hazards in our communities and keeping the public informed about decisions and safe management of contaminated properties is a key priority for the HEER Office.

### ***Interagency Program Support***

ERRF funded remedial project managers work directly with State and County agencies to identify contaminated properties they own or control, and then to provide advice and oversight for needed investigations, risk management activities and redevelopment planning efforts.

### ***Expert Consulting***

Using ERRF funding, the HEER Office makes strategic use of expert consultants under our Non-Emergency Services contract to assist with complex technical decision making on high priority sites, VRP sites, and properties with commingled contamination with multiple responsible parties. Consultant costs are cost recoverable for work under VRP, Fast Track, Voluntary Agreements, or Orders. On other projects, where investigations lead to identification of responsible parties, costs expended from the ERRF may also be cost recovered.

In FY2016, HEER used contract expertise to support technical decision making by remedial project managers on ecological risk assessment, soil gas and landfill closures and areawide EHMP development.

Blank Page

**128D RESPONSE PROGRAM SITE LISTS 2016**

---

Blank Page

## Sites Eligible for Possible Listing Under CERCLA

Three Hawaii sites are listed on the EPA National Priority List (NPL). Costs for site investigation and cleanup are being borne by the responsible parties. The state is not obligated to contribute to cleanup or future operation and maintenance costs. Through the EPA Preliminary Assessment/Site Inspection (PA/SI) Program, nine additional sites have been identified for possible listing under CERCLA.

<b>List of EPA NPL Sites - FY2016</b>			
	<u>Island</u>	<u>Locality</u>	<u>Facility/Site Name</u>
1	Oahu	Kunia	Del Monte Corp (Oahu Plantation)
2	Oahu	Navy, Naval Computer and Telecommunications Area Master Station-Pacific	NCTAMSPAC Center Street
3	Oahu	Navy, Pearl Harbor Naval Complex	Pearl Harbor Naval Complex

The following list of eight sites evaluated in Hawaii under the EPA PA/SI Program meet certain criteria for initial consideration for listing on the NPL. After careful review of site-specific data, and close coordination between the state and EPA, oversight for site cleanup of these properties has been transferred from the EPA to the HEER Office Hawaii State Response Program. These sites are no longer being considered for NPL listing.

<b>List of Sites Eligible for Possible Listing Under EPA CERCLA - FY2016</b>			
	<u>Island</u>	<u>Locality</u>	<u>Facility/Site Name</u>
1	Oahu	Waialua	Waialua Sugar Company Inc and Waialua Sugar Mill Settling Ponds
2	Kauai	Kekaha	Kekaha Sugar Mill
3	Oahu	Kailua	Kapaa Landfill - Kapaa Quarry Road
4	Oahu	Honolulu	Kapalama Incinerator and Kapalama Incinerator Off Site Contamination
5	Molokai	West Molokai	Kalamaula Landfill
6	Hawaii	Hilo	Hawaii Cane Products Plant - Waiakea Pond
7	Oahu	Kailua	Honolulu Skeet Club
8	Oahu	Honolulu	Pukoloa Wood Treating Site

### The Hawaii State Response Program (HSRP) Chemical Release Notification Log

The Hawaii State Response Program Release Notification Log shows a listing of all chemical and petroleum release notifications received by the HEER Office emergency response team during the fiscal year. The Release Notification Log is sorted in order of Island, Locality, and the Case Name.

The FY2016 Release Notification Log lists 480 hazardous substance and petroleum release notifications managed by the HEER Office State On-Scene Coordinators (SOSCs). 276 cases were directly related to the release of petroleum related substances.

HEER Office SOSCs performed direct oversight on 103 cases requiring on-site visits or off-scene coordination. 37 cases were referred to other agencies.

#### HEER Office Emergency Response Actions - FY2016

<u>Release Notifications*</u>	<u>Oil-Related Responses</u>	<u>Other</u>	<u>Direct On-site or Off-site SOSC Oversight</u>	<u>Cases Referred</u>

480	Oahu	Oily Runoff from Aloha Gas at Vineyard	20160628-2112	Oily Water Mixture	Storm Drain

## The Hawaii Response Program (HSRP) – List of Priority Sites

Chapter 128D, HRS, Environmental Response Law, Section 7, HRS mandates that a State List of Sites be published annually listing the sites with potential or known hazardous substances or pollutants or contaminants. Overall, in FY2016, HEER had oversight responsibilities for 938 active sites, and reached No Further Action determinations at 49 sites.

We present the list in two sections.

The Hawaii State Response Program List of Priority Sites presents all non-military Hawaii sites identified for potential or known non-emergency response actions under HRS 128D. Current ERRF funding supports only part of the HEER Office response obligation for these sites. 538 active sites under direct DOH oversight in the various State programs are listed and include 63 sites that were added during the last fiscal year, due to intensive ongoing identification of new sites through HEER Office site discovery efforts and voluntary investigation actions by owners or developers of previously unidentified properties. 23 state sites with known or suspected contamination received No Further Action Determinations. Of those, 13 sites require ongoing management of residual contamination through Environmental Hazard Management Plans. Note that these sites are not included separately on the Priority Site list below.

The Hawaii State Response Program DSMOA Program List of Priority Sites presents military sites in Hawaii for which SDAR provides oversight. Hazardous substance response actions are managed by various DOD branches under CERCLA authorities, with regulatory oversight from SDAR. Cleanup sites within the Pearl Harbor Naval Complex are co-regulated by US EPA, due to the National Priorities List (“Superfund”) designation. The DOD sites include numerous high priority unexploded ordnance sites (UXO). Investigations and cleanups of military sites with petroleum-contaminated sites are conducted under 128D authorities, as petroleum is not covered under CERCLA. ERRF funds are not currently used for oversight of military cleanups in Hawaii. Staff positions providing oversight for this work are currently funded by federal DSMOA grants. The list includes 400 sites that are co-managed by DOH and DOD under CERCLA and HRS 128D authorities. This year, 17 new sites were added, largely because existing sites were subdivided to close out areas that have been fully investigated and cleaned up. Because the Air Force and Navy work systematically to address high priority sites first, the majority of these sites remaining are medium and low priority. In 2015, clean up decisions were reached at 26 DSMOA sites, all of which will require ongoing management of residual contamination through Environmental Hazard Management Plans. To date, 391 military sites have been fully investigated and closed.

The lists are sorted in the order of Island, Locality or Installation, and Site Name. The site Priority, Action, and Potential Hazard are identified for each Facility/Site. Sites are categorized as a potential hazard when sampling data indicate that contaminant concentrations exceed Hawaii Environmental Action Levels. Generally, these conservative action levels are set to be protective of long term, daily exposures. Hazards are managed by removal or destruction of the contaminants (No Hazard), use restrictions that limit access to the contamination, (Institutional Controls), or physical barriers that limit exposure to the contaminants (Engineering Controls).

**HSRP LIST OF PRIORITY SITES FY2016**

**FY2016 Response Program Activity**

Response Program Activity Summary data presented in this section for the Hawaii State Response Program (SRP) includes all Hawaii sites identified for non-emergency response actions during FY2016 and sites requiring evaluation if an assessment or response action is required under HEER Office authority. The HEER Office manages sites within five program areas depending upon eligibility, funding, and level of responsible party participation as:

State Sites

Hawaii Brownfields Revitalization Sites (Brownfields)

Hawaii Voluntary Response Program (VRP) Sites

Site Discovery (SDAR) and Preliminary Assessment/Site Inspection (PA/SI) Sites

DSMOA Department of Defense Sites

Over time, a site may be managed within the HEER Office under one or more program areas, starting with the site assessment phase and if required by the State, through to cleanup completion.
