**TESTIMONY OF SCOTT E. ENRIGHT
CHAIRPERSON, BOARD OF AGRICULTURE**

BEFORE THE SENATE COMMITTEE ON AGRICULTURE & ENVIRONMENT

**FEBRUARY 13, 2017
1:15 P.M.
CONFERENCE ROOM 224**

**SENATE BILL NO. 1257
RELATED TO LIVESTOCK HARVEST FACILITIES**

Chairperson Gabbard and Members of the Committee:

Thank you for the opportunity to testify on Senate Bill No. 1257. The bill requests \$1.5 million for the planning and design of scalable livestock harvest facilities. The Hawaii Department of Agriculture supports this measure provided it does not impact the Department's priorities listed in the Executive Budget.

The Department recognizes that efficient harvest facilities are a critical component in the protein production chain and is a limiting factor in the consistent availability of locally produced meat products. Properly designed harvest facilities work towards producing safe product efficiently by giving equal attention to employee safety, pre-harvest animal health, product processing regulations and environmental impact.

Thank you for the opportunity to testify on this measure.

Hawaii Cattlemen's Council, Inc.

COMMITTEE ON AGRICULTURE AND ENVIRONMENT

Senator Mike Gabbard, Chair
Senator Gil Riviere, Vice Chair

DATE: Monday, February 13, 2017
TIME: 1:15 p.m.
PLACE: Conference Room 224

SB 1257 – RELATING TO LIVESTOCK HARVEST FACILITIES.

Makes an appropriation for the planning and design of scalable livestock harvest facilities to be expended by DOA.

Chair Gabbard, Vice Chair Riviere, and Members of the Committee:

My name is Lisa Wood and I currently serve as president of the Hawaii Cattlemen's Council. The Hawaii Cattlemen's Council, Inc. (HCC) is the Statewide umbrella organization comprised of the five county level Cattlemen's Associations. Our 150+ member ranchers represent over 60,000 head of beef cows; more than 75% of all the beef cows in the State. Ranchers are the stewards of approximately 25% of the State's total land mass.

The Hawaii Cattlemen's Council **strongly supports** SB 1257 as this measure provides funds for the planning and design of a scalable livestock harvest facility.

Of the large agrarian enterprises that have been undertaken in Hawaii, only cattle remain. The beef industry represents economic, environmental and cultural sustainability for our state. According to University of Hawaii figures, Hawaii supplies only 6% of the beef consumed in the state. We have great capacity to grow our local market and support Hawaii's economic base. Ranchers are essentially "grass farmers," providing open space, reducing fuel load for wildfires, maintaining our watersheds and utilizing lands that are otherwise unproductive and inaccessible. Lastly, the ability to provide our own food source is an inherent strength in any community, but particularly so in an island state that is so dependent upon imports to feed its population. The increased demand for "farm to fork" products strongly supports agriculture that is locally sourced.

In a recent series of community meetings held across the state, producers identified processing as the major bottleneck for marketing of local beef. The current processing plants have played a vital role in maintaining avenues for our market animals, but they are aging and with the expanding demand for locally raised beef, our current facilities have not been able to accommodate the increased numbers. In keeping with HCC's mission to be an advocate for Hawaii's ranchers, HCC has been working to address specific long and short-term needs. While short-term needs are at a critical stage in some counties, specific issues are being addressed separately. Our long-term success and resilience depends upon our ability to address both needs.

This bill is designed to provide not only needed capacity but also allow a new plant to incorporate new technologies to enhance energy and waste management, food safety and animal welfare. This also provides the potential for new certifications required by retailers and for export certification, which would open foreign markets for Hawaii beef.

The proposed bills would provide a set of architectural plans of a scalable plant that any third-party (investor/group of producers) could adapt to any specific parcel in any county for the purpose of building a processing facility. This plan would:

- a. reduce construction time and cost by having these plans readily available
- b. take into account the projected growth of the industry per island
- c. safeguard against oversupply while offering adaptability for an undersupply of cattle
- d. incorporate best practices for energy efficiency and waste disposal, improved processing flow, and new designs to update food safety and animal welfare.

Hawaii's cattle industry is committed to a robust future and opportunities for continued growth. By supporting this bill, Hawaii's legislators vote to support Hawaii's agriculture and grow a more food-secure community.

We respectfully ask this committee to support this measure and we appreciate the opportunity to testify on this critical matter for our industry.

Senate Committee on Agriculture and the Environment
Senator Mike Gabbard, Chair and Senator Gil Riviere, Vice Chair
Monday, February 13, 2017, 1:15pm
State Capitol, Conference room 224
SB 1257 – Relating to Livestock Harvest Facilities

My name is Sara Moore and I am the current president of the Hawaii Cattlemen's Association (HCA) on the Big Island of Hawaii. Hawaii Cattlemen's Council is the state-wide umbrella organization of which HCA is under.

I am writing in **strong support** of SB 1257.

Many members of HCA attended a recent series of community meetings jointly held across the state by HCC and HDOA. These producers identified livestock harvest and processing as one of the **major** bottlenecks for marketing of local beef.

HCA and HCC's mission is to serve as an advocate for Hawaii's ranchers. In keeping with that mission, HCC has been working to address specific long and short-term needs for livestock harvest. While short-term needs are at a critical stage in some counties, specific issues are being addressed separately. Our long-term success and resilience depends upon our ability to address both needs

As a manager of a large cattle ranch on Hawaii Island, I am continually having trouble getting my livestock processed at the existing processing plants. As HCA president, I hear this problem over and over again. The two facilities that can process animals are running at the maximum capacity possible, with existing aging infrastructure. Although the HDOA has supported the mobile slaughter facility on the Big Island, there is more need by producers, especially beef producers.

This bill will provide funding for the planning and design of a scalable harvest facility that could be used in multiple venues. Once completed, our industry will be in a stronger position to attract potential investors. Hawaii's ranchers firmly believe in our future and the ability of agriculture to remain a relevant part of our economy. SB 1257 represents a great opportunity for Hawaii's lawmakers to advance efforts to provide a more food secure community.

Hawaii's beef industry is at a crossroads. Increased demand for locally-raised beef has challenged our current infrastructure's capacity to meet the growing market. To take the right road, our industry needs to prepare for this expansion. With the funding of HB 1389 and its foresight, Hawaii's ranchers would be uniquely positioned to provide economic, environmental and social sustainability, through the ability to grow our local market.

Hawaii ranchers provide a multitude of ecosystem services including protection of our watersheds, decreased fire load and maintaining aesthetic open spaces. By the efforts to build this industry of providing pasture raised beef to our local consumers, we, as a community, are supporting these ranchers' efforts to maintain these ecosystem services

I respectfully request your support of SB 1257.

Sincerely,

Sara Moore, HCA President

OUR MISSION

HCIA is a Hawaii-based non-profit organization that promotes modern agriculture to help farmers and communities succeed. Through education, collaboration and advocacy, we work to ensure a safe and sustainable food supply, support responsible farming practices and build a healthy economy.

TESTIMONY FROM BENNETTE MISALUCHA, EXECUTIVE DIRECTOR

In Support of SB 1257

Relating to Livestock Harvest Facilities

**Makes an appropriation for the planning and design of
scalable livestock harvest facilities to be expended by DOA**

SENATE COMMITTEE ON AGRICULTURE AND ENVIRONMENT

February 13, 2017, 1:15 p.m.

Conference Room 224

Chair Gabbard and members of the committee:

The Hawaii Crop Improvement Association (HCIA) is a Hawaii-based non-profit organization that promotes modern agriculture to help farmers and communities succeed. Through education, collaboration, and advocacy, we work to ensure a safe and sustainable food supply, support responsible farming practices, and build a healthy economy.

HCIA **supports SB1257**, which would allocate \$1.5 million to the Hawaii Department of Agriculture to plan and design scalable livestock harvest facilities.

As we understand it, many of the existing livestock harvest facilities on the islands are not equipped to handle the recent resurgence of cattle production. This is a problem, especially when you consider Governor Ige's goal to double local food production by 2020. Hawaii cattle ranchers need our help and support to remain competitive and continue to serve local markets.

Thank you for your consideration of our comments.

Respectfully submitted,

Bennette Misalucha
Executive Director

February 13, 2017

HEARING BEFORE THE
SENATE COMMITTEE ON AGRICULTURE AND ENVIRONMENT

TESTIMONY ON SB 1257
RELATING TO LIVESTOCK HARVEST FACILITIES

Room 224
1:15 PM

Aloha Chair Gabbard, Vice Chair Riviere, and Members of the Committee:

I am Randy Cabral, President of the Hawaii Farm Bureau (HFB). Organized since 1948, the HFB is comprised of 1,900 farm family members statewide, and serves as Hawaii's voice of agriculture to protect, advocate and advance the social, economic and educational interests of our diverse agricultural community.

HFB supports SB 1257, which makes an appropriation for the planning and design of scalable livestock harvest facilities to be expended by DOA.

This bill is designed to provide not only needed capacity but also allow a new plant to incorporate new technologies to enhance energy and waste management, food safety and animal welfare. This also provides the potential for new certifications required by retailers and for export certification, which would open foreign markets for Hawaii beef.

The proposed bills would provide a set of architectural plans of a scalable plant that any third-party (investor/group of producers) could adapt to any specific parcel in any county for the purpose of building a processing facility. This plan would:

- a. reduce construction time and cost by having these plans readily available
- b. take into account the projected growth of the industry per island
- c. safeguard against oversupply while offering adaptability for an undersupply of cattle
- d. incorporate best practices for energy efficiency and waste disposal, improved processing flow, and new designs to update food safety and animal welfare.

Thank you for the opportunity to testify on this measure.

Submitted By	Organization	Testifier Position	Present at Hearing
Cathy Goeggel	Animal Rights Hawai'i	Oppose	Yes

Comments: RE: SB1257 position: oppose In a futile attempt to soften the image of its grisly business, the livestock industry has appropriated the word "harvest" to describe the violent slaughter and exsanguination of sentient beings. Therefore a bill to pour one and one half million taxpayer dollars into slaughterhouses - is entitled for "livestock harvest facilities." Every year the taxpayers are dunned by the livestock industry for feed subsidies, excise tax exemptions, loans- and we actually inherited the failed slaughterhouse at Campbell Industrial Park, after pouring millions into Palama Meat which went bankrupt. How can this be considered sustainable? It is actually corporate welfare for a few large landowners who wish to preserve their rural lifestyle at the expense of the state. If the wealthy ranchers want to build new slaughterhouses- let them use their own money. Thank you. Cathy Goeggel President

TESTIMONY OF KEOKI WOOD, LIVESTOCK MANAGER, PARKER RANCH, INC. TO THE SENATE COMMITTEE
ON AGRICULTURE AND THE ENVIRONMENT

February 13, 2017

1:15 pm

State Capitol, Conference Room 224

MEASURE: S.B. No. 1257

TITLE: RELATING TO LIVESTOCK HARVEST FACILITIES

Senator Gabbard, Senator Riviere, and members of the Agriculture and Environment Committee:

Parker Ranch, Inc. fully supports Senate Bill 1257.

Livestock harvest facilities are critically important to supporting the cattle industry within the State. First, local harvest facilities provide ranches the opportunity to hold cattle back from shipment to the mainland to meet local demand and expand our local food system. Additionally, harvest facilities are imperative in providing stability within livestock operations given the need to cull cattle and mitigate losses in drought conditions.

The two existing harvest and packaging facilities on Hawai'i Island both are reaching the end of their estimated remaining useful life. The next five to ten years are important for the industry as it prepares for the inevitable retirement of these facilities. Planning and anticipating these changes is important for all ranches in the State, but especially on the Big Island which is home to 75% of Hawaii's total pasture, estimated by UH researcher Jeff Melrose to be close to 555,000 acres. This bill provides the needed resources to design and plan for the future growth and stability for the industry throughout the State. In addition to the estimated remaining useful life for Big Island harvest facilities, current capacity constraints at these facilities limit the volume of local beef that can be harvested and therefore limits the expansion of our local food system. It is important for all ranches, operators, and industry leaders to work together to plan and design a model for a harvest facility that can grow alongside our evolving industry.

The planning and design for a scalable harvest facility provides an opportunity to research integrated features and engage designers and experts to consider a harvest facility that can be adapted to various natural resources, pasture resources, and herd sizes around the State. Current designs around the country and world have successfully integrated renewable energy, on-site wastewater treatment, cold storage, modular floor design, and anaerobic digestion. These design principles, among others, should be explored and further defined as plans for innovative facilities are developed.

Parker Ranch believes that there is a great need for harvest facilities around the State to support the vibrant cattle industry in Hawaii. Increasing local food production and supporting our State's ranching heritage and industry is important to increasing the sustainability of Hawaii's food system. Working with designers and engineers to understand the ideal design and feasibility for harvest facilities is an important step towards realizing sustainability for the future of Hawaii's cattle industry.

Thank you for the opportunity to testify.

TESTIMONY OF JASON VAN TASSELL, LIVESTOCK MANAGER, PANIOLO CATTLE COMPANY, LLC, A
SUBSIDIARY OF PARKER RANCH, INC. TO THE SENATE COMMITTEE ON AGRICULTURE AND THE
ENVIRONMENT

February 13, 2017
1:15 pm
State Capitol, Conference Room 224

MEASURE: S.B. No. 1257
TITLE: RELATING TO LIVESTOCK HARVEST FACILITIES

Senator Gabbard, Senator Riviere, and members of the Agriculture and Environment Committee:

Paniolo Cattle Company (PCC) fully supports Senate Bill 1257.

PCC was established with the mission of supporting statewide local beef production to meet the demand for high-quality, affordable, and locally raised beef. Supporting this market to respond to local demand provides ranches with the opportunity to hold cattle back from shipment to the mainland and expand our local food system. As such, livestock harvest facilities are critically important to supporting local food production in Hawaii.

Consumer demand for local, grass-fed products in Hawaii has increased in recent years, following national trends. The Wall Street Journal reported in 2016 that “sales for grass-fed beef rose nearly 40% over the year before, while conventional beef only grew 6.5% during the same period.”¹ Based on average beef consumption for both residents and tourists in Hawaii, the University of Hawaii, College of Tropical Agriculture and Human Resources (CTAHR) estimates that total statewide demand is over 89 million pounds of beef per year, or roughly 198,000 market cattle. Currently UH researchers estimate that local supply only meets 6.2% of local demand. This percentage has an opportunity to increase as local programs like PCC that are utilizing Hawaii’s pasture forage become more established.

Harvest facilities are vital to that growth and providing the equipment and processes that align with current safety and handling standards required by retailers sourcing and selling local beef products. Retailers that PCC are working with, such as Safeway and other distributors, are responding to industry demands to comply with GAP and other humane animals handling and food safety practices. Designing and planning for a harvest facility with these capabilities from the start will streamline these processes and requirements for operators and ranches moving forward.

On Hawai’i Island, there are two existing harvest and packaging facilities for cattle with an estimated remaining useful life of less than 10 years. Within these facilities, given nameplate capacity, there are constraints on the volume of local beef that can be harvested which therefore limits expansion of our network of local ranches participating in and helping to grow PCC and other local programs.

¹ Wall Street Journal. *Why grass fed beef is on a roll*. Accessed from: <http://www.wsj.com/articles/why-grass-fed-beef-is-on-a-roll-1474388110>

The planning and design for a scalable harvest facility provides an opportunity to consider the unique natural resources, pasture resources, and herd sizes around the State and align those conditions to meet the growth opportunities that local program like PCC have. Using our partnership with Safeway as a benchmark, there has been great response by consumers throughout the State to local, pasture raised beef products. In order to build on this momentum and further develop our local markets, ensuring processing slots and volume on a week to week basis is critical. Harvest facilities that can expand and contract should be a key design question and consideration to adequately align with market conditions.

As a growing company, PCC believes that there is a great need for additional, state of the art harvest facilities to support ranches establishing local, pasture raised programs. Increasing local food production and supporting ranches in this way will increase the sustainability of Hawaii's food system and a harvest facility gets us closer to that goal.

Thank you for the opportunity to testify.

Senate Committee on Agriculture and the Environment
Senator Mike Gabbard, Chair and Senator Gil Riviere, Vice Chair
Monday, February 13, 2017, 1:15pm
State Capitol, Conference room 224
SB 1257– Relating to Livestock Harvest Facilities

My name is Jim Greenwell and I represent Palani Ranch Company in Kona. I am a member of Hawaii Cattlemen's Council (HCC) and I am writing in **strong support** of SB 12357. Hawaii Cattlemen's Council is the state-wide umbrella organization comprised of the four county level Cattlemen's Associations. HCC's mission is to serve as an advocate for Hawaii's beef industry and all of Hawaii's ranchers. In keeping with that mission, HCC has been working to address specific long and short-term needs for livestock harvest.

In a recent series of community meetings held across the state in concert with the Department of Agriculture, producers identified livestock harvest and processing as one of the major bottlenecks for marketing of local beef. While short-term harvest and processing needs are at a critical stage in some counties, these specific issues are being addressed separately. Our long-term success and resilience Statewide depends upon our ability to address both short and long term needs and to be planning today for what needs to be in place within the foreseeable future.

The increased demand for locally-raised beef has challenged our current infrastructure's capacity to meet the growing market. Our industry is at a crossroads as we need to prepare for this expansion if we are to build our local production capacity and reduce the number of cattle produced locally but exported to be finished on the mainland. Hawaii's ranchers are uniquely positioned to provide economic, environmental and social sustainability. Hawaii currently produces only 6% of the beef consumed within our state. With the rising demand for locally sourced food, there is much capacity to grow our local market if we have the necessary infrastructure available to all producers.

It is worth noting that Hawaii ranchers provide a multitude of ecosystem services that are often taken for granted by agriculture's urban neighbors including the protection of vast watersheds, soil conservation, management of habitat, decreased fire load and the maintenance and management of tens of thousands of acres of aesthetic open spaces and view planes. In many areas Statewide, it is beef production and ranching that is keeping country Country! So keeping our local beef industry healthy and well positioned for its future needs is not only about providing more pasture raised beef to our communities that is a healthy, nutritionally wholesome protein source at a reasonably price, but it is also about underwriting the long term responsibly managed use of almost a million acres of grazing land which today remains in livestock production.

This bill will provide funding for the planning and design of a scalable harvest facility that could be used in multiple venues as each major island has a long term need for improved harvest and processing infrastructure. The development today of plans for a universally applicable harvest and processing facility that could be scaled and adapted to the needs of each island's local production needs would provide the industry with a valuable planning tool and design specs to assist us in attracting the necessary investors including stakeholders from within our industry to develop the infrastructure needed to keep our local beef industry viable and sustainable for decades to come. Once the plans for this prototype plant are completed, our industry will be in a stronger position to attract potential investors. Hawaii's ranchers firmly believe in its future and the ability of agriculture to remain a relevant part of our economy. HB 1389 represents a great opportunity for Hawaii's lawmakers to advance efforts to provide a more food secure community.

I respectfully request your support of SB 1257.

Sincerely,

James S. Greenwell

In a recent series of community meetings held across the state, producers identified livestock harvest and processing as one of the major bottlenecks for marketing of local beef. HCC's mission is to serve as an advocate for Hawaii's ranchers. In keeping with that mission, HCC has been working to address specific long and short-term needs for livestock harvest. While short-term needs are at a critical stage in some counties, specific issues are being addressed separately. Our long-term success and resilience depends upon our ability to address both needs Hawaii's beef industry is at a crossroads as increased demand for locally-raised beef has challenged our current infrastructure's capacity to meet the growing market. Our industry needs to prepare for this expansion. Hawaii's ranchers are uniquely positioned to provide economic, environmental and social sustainability. Hawaii currently produces only 6% of the beef consumed within our state. With the rising demand for locally sourced food, there is much capacity to grow our local market. Hawaii ranchers provide a multitude of ecosystem services including protection of our watersheds, decreased fire load and aesthetic open spaces. By providing pasture raised beef to our communities, the beef industry supplies a healthy, nutritionally wholesome protein source at a reasonably price to our island residents. This bill will provide funding for the planning and design of a scalable harvest facility that could be used in multiple venues. Once completed, our industry will be in a stronger position to attract potential investors. Hawaii's ranchers firmly believe in its future and the ability of agriculture to remain a relevant part of our economy. SB 1257 represents a great opportunity for Hawaii's lawmakers to advance efforts to provide a more food secure community. I respectfully request your support of SB 1257. Sincerely, Keith F. Unger
Manager McCandless Ranch

Comments: Hawaii Cattle Producers Cooperative Association strongly supports HB 1389 as it does work towards a long term solution to grow the local beef market in the State of Hawaii and provide feasibility funding for a new much needed livestock harvest and processing facility to benefit local Hawaii ranchers.

Comments: I am a small rancher on the Big Island. I am in strong support of this bill. Good long-range planning is critical to the long term success of a processing facility. Many other ranchers have a very hard time getting bookings for their animals, and we need more capacity.

SB 1257 – Relating to Livestock Harvest Facilities

My name is Christopher English and I represent PRL English, LLC. I am a member of Hawaii Cattlemen's Council (HCC) and I am writing in **strong support** of SB 1257. Hawaii Cattlemen's Council is the state-wide umbrella organization comprised of the four county level Cattlemen's Associations.

In a recent series of community meetings held across the state, producers identified livestock harvest and processing as one of the major bottlenecks for marketing of local beef. HCC's mission is to serve as an advocate for Hawaii's ranchers. In keeping with that mission, HCC has been working to address specific long and short-term needs for livestock harvest. While short-term needs are at a critical stage in some counties, specific issues are being addressed separately. Our long-term success and resilience depends upon our ability to address both needs

Hawaii's beef industry is at a crossroads as increased demand for locally-raised beef has challenged our current infrastructure's capacity to meet the growing market. Our industry needs to prepare for this expansion.

Hawaii's ranchers are uniquely positioned to provide economic, environmental and social sustainability. Hawaii currently produces only 6% of the beef consumed within our state. With the rising demand for locally sourced food, there is much capacity to grow our local market. Hawaii ranchers provide a multitude of ecosystem services including protection of our watersheds, decreased fire load and aesthetic open spaces. By providing pasture raised beef to our communities, the beef industry supplies a healthy, nutritionally wholesome protein source at a reasonably price to our island residents.

This bill will provide funding for the planning and design of a scalable harvest facility that could be used in multiple venues. Once completed, our industry will be in a stronger position to attract potential investors. Hawaii's ranchers firmly believe in its future and the ability of agriculture to remain a relevant part of our economy. SB 1257 represents a great opportunity for Hawaii's lawmakers to advance efforts to provide a more food secure community. I respectfully request your support of SB 1257.

Sincerely,

Christopher English
