

STATE OF HAWAII
DEPARTMENT OF HEALTH
P. O. Box 3378
Honolulu, HI 96801-3378
doh.testimony@doh.hawaii.gov

**Testimony in SUPPORT of S.B. 0134 SD1 HD1
RELATING TO THE UNIVERSITY OF HAWAII**
REPRESENTATIVE SCOTT Y. NISHIMOTO, CHAIR
HOUSE COMMITTEE ON JUDICIARY

Hearing Date: April 4, 2018

Room Number: 325

1 **Fiscal Implications:** None to the Department of Health.

2 **Department Testimony:** The Department of Health (DOH) supports Senate Bill 0134, Senate
3 Draft 1, House Draft 1 (S.B. 0134 SD1 HD1) as a public health measure to establish tobacco-free
4 policies, including electronic smoking devices (ESD), on all University of Hawaii (UH) System
5 premises. The purpose of this measure is to promote positive health practices and to protect UH
6 students, employees, and visitors from exposure to secondhand smoke by prohibiting smoking,
7 including the use of ESDs and other tobacco products. The DOH defers to the UH regarding
8 implementation.

9 Tobacco use continues to be the leading preventable cause of death and disability in the
10 United States and Hawaii.¹ Each year smoking alone is responsible for more deaths than
11 HIV/AIDS, alcohol, motor vehicle crashes, illegal drugs, and fires combined.² In an effort to
12 protect youth and young adults against this epidemic, the U.S. Department of Health and Human
13 Services (DHHS) partnered with leading policy and educational experts to launch the Tobacco-
14 Free College Campus Initiative (TFCCI) in the fall of 2012.³ Former U.S. Assistant Secretary
15 for Health, Dr. Howard Koh, one of the originators of this initiative, stated that having tobacco-
16 free college campuses is an important opportunity to protect over 20 million people on college

¹ U.S. Centers for Disease Control and Prevention. (December 28, 2016). *Burden of Tobacco Use in the U.S.*

https://www.cdc.gov/tobacco/data_statistics/fact_sheets/health_effects/effects_cig_smoking/index.htm retrieved February 2, 2018.

³ U.S. Department of Health and Human Services. (2012). *About the TFCCI*. <http://tobaccofreecampus.org/aboutpage>

1 and university campuses across the nation.⁴ Tobacco and smoke-free college campuses
2 initiatives are steadily increasing in number. The American Nonsmokers' Rights Foundation
3 (ANR) reported as of January 2018, nearly 1,800 campuses are 100% tobacco-free, up from
4 nearly 1,500 colleges and universities across the country last year.

5 Although the prevalence of adult smokers has declined, due to either cessation or
6 premature death, youth and young adults remain the sole source of "replacement smokers" by the
7 tobacco industry. According to the U.S. Surgeon General's Report, nearly 9 out of 10 smokers
8 started using cigarettes by age 18, and 99% start by age 26.⁵ Data show that if young people do
9 not start using tobacco by age 26, they almost certainly will never start. For these reasons,
10 colleges and universities have an important role in tobacco use prevention and cessation efforts.

11 Since the UH System is the largest provider of higher education in the state,
12 implementation of tobacco-free campuses has the potential to reduce the health and economic
13 burdens placed upon our state related to smoking. In 2016, 12% of adults aged 18-24 years of
14 age reported being current smokers.⁶ Intervening during a critical age juncture by creating a
15 tobacco-free UH System would positively impact over 50,000 students across all ten campuses.⁷
16 According to the Centers for Disease Control and Prevention and the American Cancer Society,
17 the benefits of smoke-free worksites include increased productivity and decreased use of sick
18 time, decreased risk of fire, and possible decreased maintenance expense for facilities and
19 grounds in managing related litter.^{8,9}

20 Thank you for the opportunity to provide testimony.

UNIVERSITY OF HAWAII SYSTEM

Legislative Testimony

Testimony Presented Before the
House Committee on Judiciary
April 4, 2018 at 2:00 p.m.

By
Jan Gouveia
Vice President for Administration
University of Hawai'i

SB 134 SD1 HD1 – RELATING TO THE UNIVERSTIY OF HAWAII

Chair Nishimoto, Vice Chair San Buenaventura, and members of the committee:

I am respectfully submitting written testimony on behalf of the University of Hawai'i regarding Senate Bill 134 SD1 HD1 – Relating to the University of Hawai'i – which proposes to amend HRS, Chapter 304A, University of Hawai'i System, by adding a new section prohibiting smoking (including the use of electronic smoking devices, and tobacco use) on all University of Hawai'i premises within the State.

In addition, this bill proposes to also amend HRS, Chapter 89, Collective Bargaining in Public Employment, by adding a new section specifying that the above-referenced smoking and tobacco use prohibitions shall not be subject to collective bargaining.

The University fully supports the goal of this bill to promote positive health practices and protect University of Hawai'i students, employees, and visitors from exposure to smoke and other potentially harmful substances caused by tobacco use. The bill would be aligned with similar programs at universities and colleges across the nation implementing campus-wide bans including electronic smoking devices in order to provide healthy learning and work environments for campus communities.

Studies have been conducted showing that a smoke-free campus is an effective intervention for reducing smoking and tobacco use among college students. Studies have also shown that college students are at risk for initiating social smoking practices which later progress to regular smoking, as well as exposure to secondhand smoke in outdoor areas, student residence halls, campus events, and other sporting and social settings. Prohibitions have been shown to reduce both smoking prevalence and second hand smoke, and increase smoke-free social norms.

Lastly, this bill is consonant with the legislature's smoke-free efforts over the years to reduce health problems by implementing smoking restrictions in and near state facilities including complete ban at K-12 public schools and associated events.

Thank you for the opportunity to provide testimony on this measure.

Testimony in SUPPORT of the intent of SB 134, SD1, HD1 “Relating to The University of Hawaii”

The American Heart Association **SUPPORTS the intent** SB 134, SD1, HD1 but voices concern that the HD1 version of the bill opens the door to make the public’s health a collective bargaining negotiation option. Protecting the public’s health, especially from products as deadly as tobacco--the leading preventable cause of death in our state--should not be negotiable.

Supporting universities and colleges in becoming tobacco-free is one of the American Heart Association’s national policy goals.

Tobacco use is one of the leading preventable risk factors for cardiovascular diseases. As we’ve learned through our policy efforts to restrict smoking in public and work places, such policies not only reduce exposure to non-smokers of deadly environmental tobacco smoke, but also have the added benefit of changing the public norms regarding tobacco use. The Hawaii Department of Health reported last month that over the last 20 years, similar cumulative tobacco control efforts have resulted in approximately \$1 billion in healthcare cost savings to the state.

The University of Hawaii’s desire to eliminate tobacco use on its campuses make them healthier, safer places for student learning, and will further send the clear message to the community that tobacco use is no longer encouraged in our society. It will also help support those who continue to use tobacco, but want to quit, to achieve the goal of cessation.

Please support SB 134, SD1, HD1 but consider amending Section 2, lines 5 and 6, to eliminate the opportunity to negotiate through collective bargaining the opportunity to continue the use of deadly tobacco products on our school campuses. The public’s health should not be negotiable to benefit the profits of Big Tobacco.

Respectfully submitted,

A handwritten signature in black ink that reads "Donald B. Weisman".

Donald B. Weisman
Hawaii Government Relations/Communications Director

*“Building healthier lives,
free of cardiovascular
diseases and stroke.”*

Testimony Presented Before the House Committee on Judiciary
Wednesday, April 4, 2018 at 2:00 pm
By May Rose I. Dela Cruz, DrPH

SB 134 - Relating to the University of Hawai'i

Chair Nishimoto, Vice-Chair San Buenaventura, and members of the Committee on Judiciary:

I am writing to offer my testimony in **strong support of SB 134** which prohibits smoking and tobacco use, including the use of electronic smoking devices, by any person on the premises of the University of Hawai'i (UH).

I was a student and now I'm an employee of UH. I received my undergraduate degree and both graduate degrees from UH Mānoa. I am now faculty at UH with an office on campus. Through my years of attending and working at UH, walking around campus gave me a healthy dose of physical activity, but it was also a bit unhealthy. I have asthma and cigarette smoke is my main trigger for an asthma attack, so I often had to use my inhaler due to the smokers on campus.

Smokers have been smoking next to the intake vents at the UH building where my office is located. At this area, there are clear makeshift ashtrays placed by the smokers to house their cigarette butts. The cigarette smoke may not bother others in the building, but it has caused me numerous asthma attacks. I am in my office more than eight hours a day and have been constantly using my inhaler. My doctor has prescribed yet another inhaler on top of what I'm taking to minimize my breathing problems and she has also recommended an air purifier. UH's Public Safety and Environmental Health and Safety Departments have been called, but they have articulated that they do not handle smoking-related problems. **It is frustrating that I work at a smoke-free campus, yet suffer because this policy is not enforced.** Smokers are allowed to violate policy at the expense of the university's students, faculty, staff, and visitors.

SB 134 will change how tobacco and smoking use will be enforced on campus. It will assist individuals like me who are medically affected by smoke and will give us a chance to breathe easier at our university.

Mahalo for allowing me to submit testimony.

SB-134-HD-1

Testimony for JUD on 4/4/2018 2:00:00 PM

Submitted By	Organization	Testifier Position	Present at Hearing
Wendy Arbeit	Individual	Support	No

Comments:

I strongly support this measure. It's important for the health of smokers as well as non-smokers, who will be affected by second-hand smoke.

Date: April 3, 2018

To: The Honorable Scott Nishimoto, Chair
The Honorable Joy San Buenaventura, Vice Chair
Members of the House Committee on Judiciary

From: Trish La Chica, Policy and Advocacy Director, Hawai'i Public Health Institute

Re: **Support for SB134 SD1 HD1, Relating to the University of Hawaii**

Hrg: April 4, 2018 at 2:00 PM at Conference Room 325

Thank you for the opportunity to submit testimony in SUPPORT of SB134 SD1 HD1 which urges the State of Hawai'i to prohibit smoking and tobacco use, including the use of electronic smoking devices, by any person on the premises of the University of Hawai'i.

The Coalition for a Tobacco-Free Hawai'i (Coalition) is a program of the Hawai'i Public Health Institute (HIPHI) that is dedicated to reducing tobacco use through education, policy, and advocacy. With two decades of history in Hawai'i, the Coalition has led several campaigns on enacting smoke-free environments, including being the first state in the nation to prohibit the sale of tobacco and electronic smoking devices to purchasers under 21 years of age.

Tobacco use and exposure to secondhand smoke in any form causes serious health risks such as cancer, heart disease, and respiratory illness. Restricting tobacco and e-cigarette use throughout a campus reduces these risks and promotes the health and well-being of members of the entire campus community. Having a campus-wide policy also helps to reduce the youth initiation to tobacco products, including electronic smoking devices. In addition, smoke-free policies economically benefit the University of Hawai'i by contributing to reduced health care costs and employee absenteeism, as well as increased productivity and cost savings associated clean-up of cigarette litter.

There is no safe level of exposure to secondhand smoke.

The level of air pollution from a cigarette is so severe that breathing it is dangerous for anyone, but especially for children. Secondhand smoke has more than 7,000 chemicals, at least 70 of which are known to cause cancer. Further, the 2016 U.S. Surgeon General Report has determined that emissions from e-cigarettes are not harmless. "It can contain harmful and potentially harmful chemicals, including nicotine; ultrafine particles that can be inhaled deep into the lungs; flavoring such diacetyl, a chemical linked to a serious lung disease; volatile organic compounds such as benzene, which is found in car exhaust; and heavy metals, such as nickel, tin, and lead."ⁱ

This measure aims to protect all students in Hawai'i.

Currently all students attending grades K-12 in Hawai'i are able to attend school on tobacco-free campuses. However because only the University of Hawai'i Manoa is smoke-free, thousands of our students, faculty, and school visitors are no longer protected from the harmful effects of secondhand smoke. Smoking and the use of electronic cigarettes are not conducive to a healthy learning environment and can seriously compromise anyone's health.

As of January 2, 2018 there are now 2,106 smoke-free campuses in the United Statesⁱⁱ. Hawai'i has been a leader, protecting the public and its visitors from the dangers of secondhand smoke, and now, the State Legislature has the opportunity to protect everyone on the University of Hawai'i campuses from the harmful effects of secondhand smoke.

Thank you and we respectfully ask that you pass SB134 SD1 HD1 out of committee.

Mahalo,

Trish La Chica
Policy and Advocacy Director

House Committee on Judiciary
Rep. Scott Y. Nishimoto, Chair
Rep. Joy A. San Buenaventura, Vice Chair

Subject: Strong Support for SB134, SD1, HD1

Aloha Chair Nishimoto,

I am writing in support of SB134, SD1, HD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, HD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Mahalo,
Kathryn Braun

House Committee on Judiciary
Rep. Scott Y. Nishimoto, Chair
Rep. Joy A. San Buenaventura, Vice Chair

Subject: Strong Support for SB134, SD1, HD1

Aloha Chair Nishimoto,

I am writing in support of SB134, SD1, HD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

I am a new assistant professor at the University of Hawai'i and a 2-time cancer survivor (lymphoma). This message solely represents my own position as someone who lives with only 50% of her lungs. Exposure to cigarette smoke is a serious threat to my personal health and well-being. What's more, we owe it to our entire campus community to promote healthful living.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, HD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Mahalo,
Christabel Cheung

House Committee on Judiciary
Rep. Scott Y. Nishimoto, Chair
Rep. Joy A. San Buenaventura, Vice Chair

Subject: Strong Support for SB134, SD1, HD1

Aloha Chair Nishimoto,

I am writing in support of SB134, SD1, HD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

College is a crucial time for many young adults, who have yet to fully develop their sense of self and right vs wrong capabilities. At this age, many young people are easily influenced into unhealthy habits, such as smoking tobacco. In order to avoid the health affects of secondhand smoke and or pressure to start smoking themselves, I support a tobacco free campus.

I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, HD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Mahalo,
Anne-marie Cline

House Committee on Judiciary
Rep. Scott Y. Nishimoto, Chair
Rep. Joy A. San Buenaventura, Vice Chair

Subject: Strong Support for SB134, SD1, HD1

Aloha Chair Nishimoto,

I am writing in support of SB134, SD1, HD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

There is no safe level of exposure to secondhand smoke and even minimal exposure can increase risk for multiple health conditions. The Mid-Pacific campus is in close proximity to University of Hawaii-Manoa campus and that means that when people on the UH Manoa campus Mid Pacific students can also be exposed to the dangers of second hand smoke.

Currently all students in Hawaii in grades K-12 are able to attend school on tobacco-free campuses. However without tobacco-free college campuses, once students graduate from high school and attend University of Hawaii, these same young people are no longer protected from the harmful effects of secondhand smoke. Smoking and the use of electronic cigarettes are not conducive to any healthy learning environment and they can seriously compromise our health.

I strongly support SB134, SD1, HD1, because all the students at my school and at the University of Hawaii deserve to breathe clean, healthy air when we walk to and from our classes every day.

Hawaii has been a leader, protecting the public and its visitors from the dangers of secondhand smoke, and now, the State Legislature has the opportunity to protect everyone on the University of Hawaii campuses, students, employees, and visitors from the harmful effects of secondhand smoke.

I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, HD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

Personally, I started at smoking at 17, then quit a year later. I am 37 now, and will be a pharmacist in May. I know the consequences of smoking. Having been a student at the University of Hawaii for the past four years, and walking through disgusting smoke clouds is a common encounter on campus. Eliminating a place for smokers on campus would make it harder for students to smoke while at school, and make campus more enjoyable. It would also help to make the students healthier while on campus, and smoking less available.

I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, HD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134/HB429
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134/HB429, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134, SD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134/HB429, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134/HB429
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134/HB429, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134/HB429
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134/HB429, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support **SB134, SD1**, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support **SB134, SD1**, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134/HB429
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134/HB429, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134/HB429, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134, SD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support **SB134, SD1**, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support **SB134, SD1**, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

SB 134, SD 1, HD 1 – RELATING TO THE UNIVERSITY OF HAWAII

Cory Chun, Government Relations Director – Hawaii Pacific
American Cancer Society Cancer Action Network

Thank you for the opportunity to provide written testimony in support of SB 134, SD1, HD1, which prohibits smoking and tobacco use on University of Hawaii premises. The American Cancer Society Cancer Action Network (ACS CAN) is the nation's leading cancer advocacy organization. ACS CAN works with federal, state, and local government bodies to support evidence-based policy and legislative solutions designed to eliminate cancer as a major health problem.

Despite significant progress since the first Surgeon General's report, issued over 50 years ago, tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking. While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

Electronic smoking devices, cigars, and other non-cigarette tobacco products are not a safe alternative to cigarettes. Unfortunately, both cigar and e-cigarette use by youth is on the rise. Because they simulate the behavior of smoking, use of these products in public places where smoking is otherwise prohibited complicates enforcement of the law and weakens its effectiveness. Many of these products resemble traditional cigarettes, and produce a visible cloud when exhaled which can confusion for the public and enforcement officials alike. In addition, the unacceptability of smoking in these places could be compromised which could lead to new users or a reduction in current users who quit.

Thank you for the opportunity to provide written testimony on this important matter.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134, SD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134, SD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a university student that wants to promote positive health practices and protect myself, my fellow students, UH employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

I am writing in support of SB134, SD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support **SB134, SD1**, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134, SD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134, SD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support **SB134, SD1**, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a university student that wants to promote positive health practices and protect myself, my fellow students, UH employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support **SB134, SD1**, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134, SD1, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

**TESTIMONY IN SUPPORT OF SB134/HB429
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of SB134/HB429, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

**TESTIMONY IN SUPPORT OF SB134, SD1
RELATING TO THE UNIVERSITY OF HAWAII**

I am writing in support of **SB134, SD1**, which prohibits smoking and tobacco use on University of Hawaii premises. Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As an individual that wants to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134/HB429, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Tobacco use remains the single largest cause of preventable death and disease and is responsible for about one third of cancer deaths. Of the roughly 20 million college and university students in the United States, more than 1 million are projected to die prematurely from cigarette smoking.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support **SB134, SD1**, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Currently in the US there are 2,064 college campuses that have become smoke-free, and of these 1,736 are tobacco-free, with 1,649 also prohibiting the use of electronic cigarettes. Four states and one US territory have also passed State Laws requiring college campuses to be smoke-free.

While approximately 90% of smokers start by age 18, fully 99% start by age 26, underscoring the importance of supporting young adults with more effective prevention and cessation efforts while eliminating exposure to secondhand smoke and all tobacco use in their learning environments.

As a student in high school, I believe that we need to promote positive health practices and protect myself, university students, university employees, and visitors from exposure to secondhand smoke and other potentially harmful substances, I urge you to support SB134, SD1, which would prohibit smoking, including the use of electronic smoking devices, and tobacco use on University of Hawaii premises.

Re: **Testimony in Strong SUPPORT of SB 134, SD1, HD1 – RELATING TO THE UNIVERSITY OF HAWAI‘I**

Thank you for the opportunity to provide testimony in **Strong Support** of SB 134, SD1, HD1 – Relating to the University of Hawai‘i, which urges the State of Hawai‘i to prohibit smoking and tobacco use, including the use of electronic smoking devices, by any person on the premises of the University of Hawai‘i.

There is no safe level of exposure to second-hand smoke and even minimal exposure can increase risk for multiple health conditions. Currently all students in Hawai‘i in grades K-12 are able to attend school on tobacco-free campuses. However without tobacco-free college campuses, University of Hawai‘i students are no longer protected from the harmful effects of second-hand smoke. Our learning and work environment extends outside the classroom, which can expose us to second-hand smoke. Smoking and the use of electronic cigarettes are not conducive to a healthy learning environment and they can seriously compromise our health.

In 2009, the American College Health Association (ACHA), a major source of guidance on college health, issued a position statement recommending that all colleges and universities implement tobacco-free policies. In 2011, the position statement was updated to include the recommendation to ban electronic cigarettes. In 2009, there were only 365 smoke-free colleges and universities in the US. However since then there has been a steady rise in new smoking policies across the US. As of April 1, 2018, there are now at least 2,164 smoke-free colleges and universities across the country, 1,805 of which are 100% tobacco-free. There are also four states, Arkansas, Illinois, Iowa, and Louisiana, and one territory, the Commonwealth of the Northern Mariana Islands, that have laws requiring their public institutions be smoke-free.

UH Mānoa implemented a smoke-free campus policy in January 2016, which has had a significant impact on reducing everyone’s exposure to second-hand smoke. Creating a state law would extend that protection to everyone on all ten campuses.

Hawai‘i has been a leader in tobacco control, protecting the public and its visitors from the dangers of second-hand smoke. The Hawai‘i State Legislature has the opportunity to make history and be the fifth state to pass tobacco-free legislation to protect all public institutions of higher learning in our state. Please take this step to protect students, employees, and visitors from the harmful effects of second-hand smoke throughout all 10 campuses of the University of Hawai‘i system by passing SB 134.

Respectfully,

Lisa Kehl, MSW, MPH, LSW, TTS
Prevention Specialist/Counselor

To: Members of the House Judiciary Committee

From: Members of the Breathe Aloha Club at University of Hawaii at Manoa

Hrg: March 21, 2018 at 10:00am at House Conference room 329

Thank you for the opportunity to submit testimony in SUPPORT of Senate Bill 134 which would prohibit smoking on ALL UH Campuses system-wide.

The Breathe Aloha club is a registered student organization that has played a great part in adopting and spreading awareness related to tobacco use and policies on campus and Statewide. We have held and participated in events like campus cigarette butt clean ups in efforts to promote better living to our community at UH Manoa. We are very passionate about inspiring the present and emerging generations to put an end to smoking.

Tobacco use continues to be the leading preventable cause of death and disability in the United States and Hawaii. Every year, tobacco is responsible for more deaths than HIV/AIDS, alcohol, illegal drugs, car accidents, murders and suicides combined. Data shows that 9 out of 10 smokers will start smoking before the age of 18 years old, and nearly all smokers have started before the age 26. Given this population, youth and young adults are at most risk for becoming addicted to tobacco and nicotine.

Because the UH System is the largest provider of higher education in the state, this push to enforce tobacco-free campuses has such a great potential to reduce health burdens and smoking-caused productivity and monetary losses in Hawaii, while increasing the overall quality of all ten campuses. This opportunity would impact not only the 51,000 students campus-wide, but the hundreds of thousands of keiki, kupuna and everyone in between that visit our campuses every day.

Second hand smoke is a major public health concern, even the CDC states that “there is no risk-free levels of exposure to second hand smoke.” All people have fundamental right to breathe clean air and that’s why the Breathe Aloha Club strongly supports and urges the passing of SB134.

Mahalo,
Chelsea Gonzales
Members of the Breathe Aloha Club at UH Manoa

Re: Strong Support for SB 134, SD1, HD1, Relating to the University of Hawai‘i

Hrg: Wednesday, April 4, 2018 at 2:00pm at Conference Room 325

Thank you for the opportunity to submit testimony in **SUPPORT** of SB 134, SD1, HD1, which prohibits smoking and tobacco use, including the use of electronic smoking devices, by any person on University of Hawai‘i premises.

The Student Health Advisory Council has played a pivotal role in the development and implementation of health policies and tobacco education on the UH System campuses. In 2015, the Student Health Advisory Council actively supported the passing of Legislative Act 122, which prohibits the sale of all tobacco products to anyone under the age of 21. We remain deeply committed to the mission of improving the public health environment and reducing the use of tobacco products, including electronic smoking devices, among adolescents and young adults.

As of April 1, 2018, there are at least 2,164 100% smoke-free campus sites in the US. Of these, 1,805 are also 100% tobacco-free. Hawai‘i has always been a leader in protecting the public and its visitors from the dangers of secondhand smoke, and now we have the opportunity to protect everyone on the University of Hawai‘i campuses — students, employees, and visitors — from the harmful effects of secondhand smoke. It is imperative that we join these fellow institutions of higher education and pass this law.

UH Mānoa launched a smoke-free campus policy in January 2016. This policy has significantly decreased the exposure to secondhand smoke on the Mānoa campus, but because students often attend classes on multiple campuses, we need to move from campus policy to state law in order to create a seamless tobacco-free environment across all ten University of Hawai‘i campuses.

We need this law to protect the fundamental right for everyone to breathe clean air throughout the University of Hawai‘i system. No student should have to be exposed to the dangers of secondhand smoke in a place of learning.

Aloha on behalf of the Student Health Advisory Council,

Stormy Dodge, Ku‘ulei Salzer, and Raychelle Valiente
Graduate Chairs

Re: Strong Support for SB 134, SD1, HD1 Relating to the University of Hawai'i

Hrg: Wednesday, April 4, 2018 at 2:00pm at Conference Room 325

We are UH Manoa students and graduate assistants for Dr. Kristen Scholly, the chair of Health Promotion at UH Manoa, who also helps organize the tobacco-free campus initiative. We are here today in strong support for SB 134, SD1, HD1.

As graduate assistants, one of our duties is to help field calls, emails and concerns that come through our office regarding UH Manoa's smoke-free campus policies. While we know that there are a minority of students who will disregard institutional policies, we believe that there has been a significant improvement over the past two years since UH Manoa has adopted smoke-free campus policies. In the cases where there are violations of the campus smoke-free policy, these encounters yield the same conclusion: a state law prohibiting tobacco use on campus will be more powerful than a campus policy.

A recent national poll conducted by the American Cancer Society found that 8 out of 10 current college students in the U.S. support policies that prohibit smoking and other tobacco. Additionally, the number of colleges and universities with comprehensive smoke- or tobacco-free policies more than quadrupled from 446 in 2010 to over 2,100 in 2018. Hawai'i has always been a leader, protecting the public and its visitors from the dangers of secondhand smoke, and now, the State Legislature has the opportunity to protect everyone on the University of Hawai'i campuses, students, employees, and visitors from the harmful effects of secondhand smoke. It is imperative that we join our fellow institutions of higher education and pass SB 134, SD1, HD1.

Mahalo nui loa, for your efforts to create a healthier place for thousands of students, faculty, and staff to learn and work.

Ivannia Alay and Rachel Savereux

Re: Strong Support for SB 134, SD1, HD1, Relating to the University of Hawai'i

Hrg: Wednesday, April 4, 2018 at 2:00pm at Conference Room 325

Thank you for the opportunity to submit testimony in **SUPPORT** of SB 134, SD1, HD1, which prohibits smoking and tobacco use, including the use of electronic smoking devices, by any person on University of Hawai'i premises.

EDEP 411: Health and Wellness Issues in Higher Education is a class that focuses on theory and research related to adolescent/young adult development, particularly health issues of college students. Throughout our college careers, we have been learning how to incorporate this knowledge. Even though everyone in this class comes from different backgrounds, some of the main concerns we found were how secondhand smoke affects everyone on campus, and the consistency of tobacco policy throughout the UH system. Over the last couple years, we have noticed a decrease in the use of cigarettes, but we think that if a State law prohibits tobacco use on campus, the ban of tobacco on college campuses will be more powerful.

The University of Hawai'i at Manoa is a Division One school which means that we have a lot of student athletes. We should be able to protect our athletes and other students by preventing secondhand smoke on campus. Our University of Hawai'i system consists of ten campuses where the majority of students are under the age of 21. If we are able to ban tobacco use across all campuses, we are also helping to uphold the legal tobacco age.

Tobacco, regardless of who consumes it, can lead to serious illnesses including cancer, heart disease, stroke, lung disease, and emphysema. Tobacco use on campus not only affects the people smoking, but also the people who have to pass through the secondhand smoke. The smell is bothersome, but most importantly, tobacco smoke is carcinogenic. We don't want to have to walk through campus smelling smoke and neither do the thousands of other students, faculty, staff, and visitors that frequent UH campuses. Smoking is a choice, but having to walk through it shouldn't be.

Mahalo for supporting SB 134, SD1, HD1.

Aloha on behalf of the EDEP 411 class,

Femke Aan, Briahn Brown, Christian Labrack, Calvin Le, Kate Magno, Molin Mo, Nicole Perez Barraza, John Schoebel, Ashley Van Allen, and Janny Wu

RE: **SB 134, SD1, HD1 Relating to the University of Hawaii**

Attention: Chair Scott Nishimoto, Vice Chair Joy San Buenaventura and members of the Committee

The University of Hawaii Professional Assembly (UHPA) **opposes SB 134, SD1, HD1**, relating to a statutory prohibition on smoking, tobacco use and the use of electronic smoking devices by any person on the premises of the University of Hawai'i. The University already has the authority and the ability to prohibit smoking and the use of tobacco and electronic smoking devices.

The University has worked with UHPA in the past and continues to work with UHPA to ensure a healthy working conditions for the faculty and subsequently the students. It continues to be the right of UHPA to work with the University to ensure that any policy that impacts faculty work environment promotes "positive health practices."

We appreciate the opportunity to continue retaining the determination of best practices in the workplace; in the workplace rather than in statute.

UHPA opposes the passage of SB 134, SD1, HD1.

Respectfully submitted,

RE: SUPPORT SB 134, SD1, HD1 RELATING TO THE UNIVERSITY HAWAII

This bill prohibits smoking and tobacco use, including the use of electronic smoking devices by any person on the premises of the University of Hawaii. This Act has been a long time coming. I was an employee at UH almost 30 years ago. Smoking was allowed in the office. My health was impacted and til this day I am super sensitive to tobacco smoke. The Lord has blessed me with good health and the only effects of second hand smoke are my eyes and lungs.

I wish that smoking would be banned at our State Capitol. Whenever I am down here, upon entering the premises, I have to hold my breath.

Thank you for allowing me the opportunity to voice my concern.
