VIA VIDEOCONFERENCE**

**SENATE BILL NO. 346 SD1  
RELATING TO FARM ANIMALS**

Chairperson Rhoads and Members of the Committee:

Thank you for the opportunity to testify on Senate Bill 346 SD1, that requires egg-laying hens be confined in accordance with the standards established in the measure and effective December 31, 2025 prohibits selling shell eggs or egg products produced by egg-laying hens confined in manner not in compliance with those standards.

The Department does not support this bill and provides comments. Local egg producers have been a part of our community for more than 100 years. These family-owned and operated egg farms have made significant contributions to the increase in local food production from 2010 – 2019. Local eggs are one of the select agricultural commodities the Department is monitoring for food security purposes. Requiring local egg producers to be 100% cage free by 2025 increases production costs and the consumer will ultimately bear those cost increases. Achieving compliance by that date is highly unlikely and will be difficult, costly, and challenging for our kamaaina egg producers. A ten-year period is a more reasonable and realistic deadline to achieve compliance without jeopardizing the economic viability of those producers.

Farming practices constantly evolve to accommodate and adapt to advances in science and the industry. This measure unreasonably restricts this important industry from incorporating innovative and compassionate egg farming practices as they may occur in the future.

The Department is actively engaged in regulating animal movement, mitigating the entry of, surveilling, and investigating diseases of animal and public health concerns. Currently, departmental resources to perform those important functions are very limited and to compound those responsibilities with the additional enforcement obligations at this time would be ill-advised and challenging. Moreover, the Department believes it is neither fair nor prudent to impose additional regulations on our kamaaina egg producers that include an unattainable and mandatory compliance deadline.

Thank you for the opportunity to testify on this bill.

University of Hawai'i at Mānoa

### SB 346 SD1 – RELATING TO FARM ANIMALS

Chair Rhoads, Vice Chair Keohokalole, and members of the Senate Committee on Judiciary:

Thank you for the opportunity to testify with comments on SB 346 SD1 relating to the raising of poultry for egg production. We support the intent of this bill and offer the following comments and suggested amendments.

The College of Tropical Agriculture and Human Resources (CTAHR) engages in research on poultry as well as provides Extension-based training to anyone interested in poultry and egg production.

At least 7 states have passed similar legislation. Of the four remaining poultry layer farms in Hawai'i, to which this bill would apply, there is already a movement to divert part of their flock to a cage-free environment.

We suggest the following changes:

1. It is not clear what authority is used to define the term “cage-free” as well as the designation of “confinement in a cruel manner”. We suggest that the authority for these criteria be presented and allow authorities familiar with the Hawaiian condition to evaluate their validity.
2. The bill does not distinguish between eggs produced in Hawai'i versus outside of Hawai'i. Is the intent to hold producers of eggs outside the state responsible for this bill? If so, that needs to be more clearly stated.
3. Given that the movement within the state is toward what the bill calls “cage-free”, making it against the law and subject to a fine seems premature. This bill does not go into effect for 4 years. It would be better to promote cage-free; and re-evaluate in 3 years the need for such a bill.
4. It is also not clear as to what constitutes an infraction subject to a fine so that subsequent infractions can be determined.

Thank you for the opportunity to submit testimony in support of the intent of SB 346 SD1 with comments and suggested amendments.

and Members of the Senate Committee on Judiciary

**Submitted by:** Lindsay Vierheilig, Hawaii State Director, the Humane Society of the United States

**RE: Testimony in strong SUPPORT of SB 346: Relating to Farm Animals**

Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

Thank you very much for considering my testimony today.

The Humane Society of the United States (HSUS), on behalf of our thousands of supporters across Hawaii, would like to express our gratitude to Senators Rhoads, Gabbard, Lee, Riviere, Shimabukuro, and Chang for introducing SB 346.

I want to also thank the Senate Judiciary committee for its strong record on protecting animals. Last year, this committee unanimously passed legislation nearly identical to SB 346, which unfortunately did not move forward due to Covid-19 delays.

As the Hawaii State Director, it is my honor to work with Hawaii lawmakers, advocates, and businesses to find consensus on ways we can help animals.

This measure is a prime example of diverse stakeholders coming together to craft legislation that will accomplish multiple important goals. All of Hawaii's main egg producers support SB 346. They do so because it adopts the egg industry's own guidelines for cage-free standards and bolsters the reputation of agribusiness. Animal groups are in strong support because it will provide important protections for millions of hens. In addition, this coalition has made good faith efforts to address the concerns of the Board of Agriculture by extending the deadline (which was already farmer-friendly) and removing criminal penalties.

**THE HUMANE SOCIETY  
OF THE UNITED STATES**

SB 346 takes commonsense steps to improve animal welfare and the future of sustainable agriculture. Hawaii has consistently been a leader in protecting animals from abuse and in promoting ethical business practices, and SB 346 fits perfectly with that tradition.

For the foregoing reasons, we kindly urge you to vote yes on SB 346.

Sincerely,

Lindsay Vierheilig  
Hawaii State Director  
The Humane Society of the United States

**RE:** Testimony in strong support of SB 346: Relating to Farm Animals

Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

On behalf of the Natural Resources Defense Council (NRDC) and our supporters across Hawaii, I'm writing to respectfully ask for your support of SB 346.

We at the NRDC have long been concerned with environmentally-destructive practices used in industrialized animal agriculture. One of the most concerning practices is the extreme confinement of farm animals in cages. While you are surely hearing about the animal welfare reasons to pass SB 346, there are strong environmental reasons to do so as well.

On Concentrated Animal Feeding Operations (CAFOs), far too much animal waste is produced for the land to absorb in a productive way. Because transporting this waste to fields in need of fertilizer is expensive, it's frequently stored in giant lagoons or applied in excess amounts to nearby land. The gases emitted from the waste increase the risk of asthma and other health problems in nearby communities. Large amounts of nitrogen and phosphorous end up in rivers and streams, causing algal blooms that wipe out fish and other aquatic life. While CAFOs of different varieties cause these problems, those that cage animals are among the worst because of the extreme concentration of animals.

Passing SB 346 would be a positive development for sustainable agriculture in Hawaii and beyond. Thank you for considering NRDC's opinion.

**RE:** Testimony in strong support of SB 346: Relating to Farm Animals

Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

On behalf of Friends of the Earth and our more than 7,500 supporters in Hawaii, we respectfully ask for your support of SB 346, which addresses the extreme confinement of farm animals by ensuring cage-free conditions. Not only will this create more humane living conditions for these animals, it will also help facilitate a more sustainable farming system.

Shifting to cage-free systems where animals have more space is a critical step away from the factory farming model that is contributing to the climate crisis, pollution, foodborne illness, unsafe communities and working conditions, and inhumane treatment of animals. Factory farms that confine millions of animals inside windowless warehouses produce a massive amount of waste that pollutes our land, water and air.

Communities with factory farms often experience noxious smells, deal with unsafe drinking water, and suffer from respiratory health impacts. Typically, it's lower-income families and communities of color that are harmed the most.

Shifting to cage-free systems has long been favored by organizations supporting family farms, sustainability, and rural communities. Many states have already passed similar laws; SB 346 would continue that momentum. We hope Hawaii will pass SB 346 into law and further create a safer, more sustainable food system.

Thank you for your consideration of our position.

**RE: Testimony in strong SUPPORT of SB 346: Relating to Farm Animals**

Dear Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

Thank you for the opportunity to testify on behalf of the Humane Society of the United States in favor of SB 346.

Your committee has a strong record when it comes to supporting improvements in the lives of animals. As you may recall, nearly identical legislation to SB 346 passed out of your committee unanimously just last year, and then also unanimously throughout the entire Senate. (The Covid-19 government shutdowns prevented it from passing in the House.)

SB 346 is the result of Hawaii's egg producers and humane advocates coming together for a more economically viable and humane future. In a time of bitter political divisions, this legislation is a testament to stakeholders listening, providing insights, and finding common ground for the betterment of farmers and animals alike.

In short, millions of egg-laying chickens in the U.S. are still confined in cages the industry terms "battery cages." Each chicken is provided roughly 67 square inches of space to live her entire life; that's smaller than the dimensions of a sheet of paper.

To egg producers' credit, they acknowledge that the future of their industry is cage-free. This is due to public concern for animal welfare, food companies' demand for cage-free products, and legislative momentum across the U.S.

We support the producers' desire to have regulatory certainty as they invest in cage-free housing. They want standards that are already familiar to egg producers and timelines that are economically feasible. SB 346 provides all of that. In fact, the standards used in the bill were crafted by the egg industry itself. Regarding how SB 346 would affect chickens, it's a tremendous step forward. Unlike in cages, chickens will be able to engage in critical natural behaviors such as perching, scratching, dust bathing, and laying eggs in nesting areas.

**THE HUMANE SOCIETY  
OF THE UNITED STATES**

It's for these commonsense reasons why states like California, Oregon, Washington, Colorado, Michigan, and Massachusetts have passed similar laws, and numerous other states have nearly identical bills pending in their legislatures in 2021.

Thank you again for considering—and hopefully supporting again—this farmer and animal-friendly legislation.

Sincerely,

Josh Balk  
Vice President, Farm Animal Protection  
Humane Society of the United States

**Date:** Tuesday, March 2, 2021

Sen. Jarrett Keohokalole, Vice Chair  
and Members of the Senate Committee on Judiciary

**Submitted by:** Jennifer Molidor, Ph.D., Senior Food Campaigner, Center for Biological Diversity, (707) 888-9261.

**RE:** Testimony in strong support of SB 346: Relating to Farm Animals

Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

Thank you for considering the testimony of the Center for Biological Diversity re: **SB 346**. It is well-documented that industrial animal agriculture is one of the leading causes of climate change, air and water pollution, habitat degradation, and other top environmental problems.

One of the most environmentally harmful practices of industrial agriculture is the use of extreme confinement, specifically hens in battery cages. I have attached the Center for Biological Diversity's factsheet detailing why these devices should be banned to create a more sustainable agricultural system.

Facilities that cram large numbers of animals into exceedingly small spaces produce enormous quantities of concentrated animal waste. Much of the waste is contaminated with antibiotic residue, heavy metals, and other pollutants. These facilities produce far more waste than can be sustainably applied to nearby cropland. Much of the waste sits stagnant in lagoon pits, often emitting noxious gases into the air or leaching into groundwater and nearby waterways.

We know that most farmers care deeply about the environment, animal welfare and public safety. But the race-to-the-bottom spurred by corporate agribusiness over the past several decades has forced many of these farmers to adopt systems that run counter to these values. It is up to lawmakers to set modest, baseline standards—as has already been done in many states—for all producers if we're going to create a sustainable agriculture system. That is exactly what SB 346 will do, and we respectfully encourage you to vote yes.

Thank you again for your consideration of this important legislation.

Jennifer Molidor, Ph.D.

## ENVIRONMENTAL IMPACTS OF EXTREME ANIMAL CONFINEMENT

**A**nimal agriculture has changed dramatically in recent decades. From the practice of concentrated animal confinement on factory farms to the massive land use required to produce feed crops for livestock and the pollution inherent in poorly regulated waste management and slaughterhouses, the current U.S. food system is unsustainable and a leading contributor to environmental degradation.

Most of the 9 billion farmed animals in the United States are confined in concentrated animal feeding operations (CAFOs), which churn out meat, poultry, egg and dairy products at an unmanageable rate. The most extreme confinement practices — battery cages, gestation crates and veal crates — have been outlawed in a dozen states. Yet they largely continue as standard practices and are linked with poor animal welfare, risks to food and worker safety, air and water pollution, greenhouse gas emissions and threats to endangered species.

### THE RISE OF CONCENTRATED ANIMAL FEEDING OPERATIONS (CAFOs)

Since the 1950s U.S. meat and dairy production has more than doubled, while the number of operations has decreased by 80 percent.<sup>1</sup> As a result greenhouse gas emissions from the agricultural sector have rapidly increased, with carbon dioxide emissions increasing by 16.2 percent, methane emissions by 14.4 percent and nitrous oxide by 7.3 percent in the past 30 years.<sup>2</sup> Methane and nitrous oxide have as much as 36 and 298 times greater global warming potential, respectively, of CO<sub>2</sub> over a 100-year period.<sup>3</sup>

The most common environmental threats from these facilities include:

- Contamination of air, water, and land from nutrients, pathogens, heavy metals, pharmaceuticals, and ammonia;
- Overconsumption of groundwater resources;
- Harm to endangered or threatened species and habitats;
- Release of greenhouse gas emissions.<sup>4</sup>

Along with the rise of CAFOs, emissions related to manure management have increased by 66 percent since 1990.<sup>5</sup> Factory farms produced an estimated 13 times as much waste as the entire U.S. population in 2012.<sup>6</sup> Unlike human waste, livestock waste is typically untreated and poorly managed.

The EPA estimates that pollution from CAFOs impairs 40 percent of rivers and streams in the United States.<sup>7</sup>

## PIGS AND GESTATION CRATES

- With more than 70 million pigs populating the United States, and 5.36 million breeding sows, factory farms have implemented the practices of extreme confinement of mother pigs in gestation crates. These tight stalls prevent sows from turning around and contain no bedding, just slatted flooring for waste disposal.
- In 2014, 93 percent of annual hog production was on operations with at least 5,000 head (compared to 27 percent in 1994).<sup>8</sup> This shift toward more concentrated facilities has resulted in increases in water and air contamination and environmental impairment.<sup>9</sup>
- The increased concentration of hogs and breeding sows creates huge cesspools of waste that are currently disposed of by spraying onto surrounding lands. The massive amounts of waste generated in limited geographic areas leads to intensive air and water pollution and related health risks to surrounding communities and wildlife.
- For example, in Iowa, more than 10 billion gallons of liquid manure are applied to fields per year from the state's more than 6,300 hog operations.<sup>10</sup> State records show 800 manure spills between 1996 and 2012, and 750 out of 1,378 tested waterways were found to be impaired.<sup>11</sup>

## CHICKENS AND BATTERY CAGES

- Most chickens spend their entire lives stocked in “battery cages,” in such high densities that they cannot exert their natural behaviors of nesting, roosting or even flapping their wings. Many chickens will die from disease and stress related to overcrowded conditions. However, the concentration of factory farming continues to encourage the use of these facilities.
- The production of poultry has shifted over recent decades toward more concentrated facilities.<sup>12</sup> The production of eggs has seen a related boom: Since 2011 top states have produced an additional 11.2 billion eggs in CAFO operations, including California, Ohio, Indiana, Missouri, Michigan, North Carolina and Texas.<sup>13</sup> The number of egg-laying hens increased by nearly 25 percent between 1997 and 2012, and the size of egg operations has grown by nearly 75 percent since 1997.<sup>14</sup>
- Battery cage facilities produce high levels of air contamination from ammonia and hydrogen sulfide as well as volatile organic compounds and dust originating from chicken feathers, bedding and chicken

Gestation crates by Humane Society of the United States

manure. Pollutants spread from the chicken cages and fields to waterways, critical habitat areas, and local community houses, churches and schools.

- In addition to large amounts of pesticide and pharmaceutical residues, bacteria, viruses, pathogens, parasites, protozoa, heavy metals and other trace elements,<sup>15</sup> poultry waste is particularly high in toxic nutrients, and yet is usually untreated, and stored and land-applied.<sup>16,17</sup> Over 90 percent of poultry waste is disposed of through land applications.<sup>18</sup> Erosion, non-agronomic waste applications, and rain can cause it to reach surface and groundwaters.<sup>19</sup>
- Release of these pollutants may result from intentional discharge, operation, maintenance, management and/or operation design problems.<sup>20</sup> Waste-management systems can have spills, leaks, accidental discharges and reach surface water and/or groundwater.<sup>21</sup>
- The EPA has noted that rain falling on dry poultry manure left outside uncovered will likely transport pollutants into nearby soil, causing groundwater pollution and contaminating surface waters.<sup>22</sup>

## **CALVES AND VEAL CRATES**

- Calves are removed from their mothers to prevent suckling and chained in crates — 22 inches by 54 inches — without the ability to move or turn around. Preventing the animals from moving keeps their muscles anemic, and the calves are fed formula instead of mother's milk.
- Calf waste is distributed either through deep pit storage or flush. The floor of the crate is composed of slats directly above a storage pit or flush alley. This flooring does not adequately allow feces and urine to pass through, and animals end up standing and sleeping in their own feces, leading to the contraction of parasites, a virus or harmful bacteria. Diarrhea from dehydration is common and sometimes fatal.<sup>23</sup>
- The majority of veal operations use large volumes of water to flush manure from storage pits to lagoons. The remaining operations store manure in a large pit beneath the shed, which uses less water but results in a higher concentration of nutrients.
- Calves are slaughtered between 4 to 5 months of age. But calves younger than 4 months are not included in greenhouse gas emission estimates, so the climate impact of veal production is unaccounted for.<sup>24</sup>

## **LACK OF ENVIRONMENTAL PROTECTION**

Despite 40 years of Clean Water Act implementation, the EPA still lacks data about where the nation's CAFOs are located and which facilities discharge pollutants into waterways without required permits.<sup>25</sup>

The EPA states 40 percent of CAFOs are regulated under National Pollutant Discharge Elimination Systems (NPDES) while 75 percent discharge as a result of "standard operational profiles."<sup>26</sup>

Despite major gaps in information and regulation, the EPA abandoned its only effort in decades to fill these gaps by developing a national inventory, under CAFO industry pressure.<sup>27</sup> This failure by EPA to develop or maintain a CAFO inventory has meant that states must identify CAFOs and determine which are subject to regulation with little guidance or oversight from EPA.

The lack of federal oversight leaves communities bearing the burden of the environmental impacts of industrial livestock production. Lawmakers can take steps to protect air, water and wildlife by banning the most extreme forms of confinement and working to close regulatory loopholes at the state and federal levels.

**RE:** Testimony in strong support of *An Act Relating to Farm Animals* (SB 346)

Chair Rhoads, Vice Chair Keohokalole, and honorable members of the Committee,

On behalf of the Animal Legal Defense Fund (ALDF) and our supporters in Hawaii, thank you for this opportunity to submit testimony in strong support of the *An Act Relating to Farm Animals* (SB 346). We thank Chairman Mike Gabbard for introducing this important legislation and Senators Chris Lee, Karl Rhoads, Gil Riviere, Maile Shimabukuro, and Stanley Chang for their support.

We respectfully urge the Committee's support for SB 346, which would establish a vital animal welfare and food safety standard for egg-laying hens raised in and eggs sold in Hawaii.

ALDF is the nation's preeminent legal advocacy organization for animals. The organization's mission is to protect the lives and advance the interests of animals through the legal system. We are working across the country to protect animals, including farmed animals, using multiple legal channels. All animals deserve humane treatment, including animals raised for food.

SB 346 would end the practice of cramming egg-laying hens into cages so small they cannot turn around or extend their limbs. Specifically, it prevents cruelty to egg-laying hens by requiring that egg-laying hens have enough space to turn around and extend their limbs and that eggs sold in Hawaii meet this modest animal protection and food safety requirement.

Cramming animals in tiny cages for months — or even years — on end is among the cruelest factory farm practices.

### **SB 346 would protect animal welfare.**

Everyone can agree that it would be wrong to confine a dog or a cat to a tiny cage for their entire life – so why is it ok to do this to a chicken? Current law allows factory farms to confine egg-laying hens in tiny spaces for virtually their entire lives.

**All our clients are innocent**

Printed on recycled paper

Most egg-laying hens are kept in battery cages for 18 months straight before slaughter. The severe limitation of physical movement can lead to metabolic disorders, including disuse osteoporosis and liver damage. Hens also commonly suffer from bone fractures because calcium is continually leached from their skeletal system to produce eggs, and in battery cages they do not get exercise that might otherwise increase their strength. Caged hens are denied almost all of their natural behaviors including nesting, perching, foraging, and dust-bathing, all important for hen welfare.

This legislation would prohibit cruel confinement<sup>1</sup>, requiring cage-free conditions for egg-laying hens. The cage-free conditions would apply to hens raised in Hawaii as well as to shell eggs and egg products sold in the state.

Cage-free hens have enough room to walk, turn around, spread their wings, and perform other natural behaviors including nesting, perching, foraging, and dust-bathing.

### **SB 346 would improve food safety.**

The vast majority of eggs sold in Hawaii come from cruel and unsafe conditions. Hens kept in extreme confinement often live in their own waste and are pumped full of drugs. These cage conditions can be incubators for disease – increasing the risk of food safety problems, like *Salmonella*.

Numerous factors are likely to contribute to the higher rates of *Salmonella* in cage operations. When hens are crammed so tightly together, pathogens can quickly spread. Additionally, the constant stress and inability to exercise may weaken their immune systems.

*Salmonella* kills more Americans and sends more people to the hospital than any other foodborne pathogen. The U.S. Food and Drug Administration (FDA) estimates that 142,000 illnesses each year are caused by consuming eggs contaminated with *Salmonella*. The agency states “Egg-associated illness caused by *Salmonella* is a serious public health problem.”

More than a dozen scientific studies have found that cage operations are significantly more likely to harbor *Salmonella* than cage-free facilities. The European Food Safety Authority (EFSA) — using the best available data comparing *Salmonella* infection risk between different hen housing systems — found significantly higher *Salmonella* rates among caged hens. The egg industry itself acknowledges the problem, with one poultry trade journal admitting, “*Salmonella* thrives in cage housing.”

Because *Salmonella* can infect the ovaries of hens, eggs from infected birds can be laid with the bacteria already inside. *Salmonella* can survive various cooking methods, (from sunny-side-up, over-easy, to scrambled), according to research funded by the American Egg Board.

Prominent consumer advocacy organizations including the Consumer Federation of America and the Center for Science in the Public Interest have called on the egg industry to switch to cage-free production. Additionally, the Center for Food Safety has endorsed similar cage-free reforms.

The stressful, overcrowded, unhygienic, and unsafe conditions in which so many animals are forced to live are irresponsible and will be ameliorated by this legislation.

---

<sup>1</sup> Such confinement is clearly defined as any non-cage-free housing system or less than 1 square foot of usable floor space per egg-laying hen for aviary-type barns or less than 1.5 square feet of usable floor space per egg-laying hen for floor-based barns.

**SB 346 would create market and regulatory certainty.**

This legislation would bring Hawaii's egg-laying hen welfare and egg safety standards in line with major food companies and other states that are calling for cage-free conditions.

Egg producers that use cages externalize costs, with animals and consumers paying the price. The economic cost of these illnesses, in the form of medical bills and lost productivity, is significant.

Moreover, cage-free makes economic sense. Egg industry studies show that it costs only 1-2 cents more per egg to use cage-free methods.

More than 200 corporations are requiring their suppliers to switch to cage-free systems, including cost-conscious companies like Hawaii-based Foodland as well as McDonald's, Burger King, Hannaford, Shaw's, Walmart, Dollar Tree, IHOP, and Denny's. Several hotel chains have also announced their commitment to cage-free systems, such as Hilton Hotels, Hyatt Hotels, Marriott International, and Wyndam Worldwide.

Already, California, Colorado, Massachusetts, Michigan, Oregon, and Washington State have passed similar laws. This legislation would streamline a transition to a cage-free egg supply for Hawaii with a reasonable timeline for compliance.

**SB 346 aligns with the morals of Hawaii.**

Please advance the *An Act Relating to Farm Animals* (SB 346) out of committee to help make Hawaii the next state to go cage-free.

Thank you for your time and consideration. Mahalo nui.

Sincerely,

Stephanie Harris

**RE:** Testimony in strong support of SB 346: Relating to Farm Animals

Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

We at Compassion in World Farming USA, an international animal protection and environmental organization, write today to express our strong support of SB 346: Relating to Animal Cruelty. Currently, Hawaii has no law in place regarding confinement standards for egg-laying hens. This oversight must be remedied immediately with the passage of SB 346, which will codify a modest, yet meaningful baseline of animal welfare.

Most eggs sold in Hawaii today come from factory farms, where hens are crammed into tiny, wire cages called “battery cages” with four to nine other birds. With virtually no freedom of movement, these hens cannot express their natural behaviors, engage in crucial social interactions, or obtain exercise. These restrictions have proven to result in cognitive and emotional deprivation, aggression, and severe illness. Birds with lower welfare and poorer health are more likely to create and transmit zoonotic disease that risks public health and safety.

SB 346 addresses these systemic problems by requiring Hawaiian farms meet basic animal welfare standards, including: barring extreme cage confinement; setting explicit space requirements; and guaranteeing enrichments for hens, such as perches and nest boxes, that allow for expression of species-important, natural behavior in a feasible timeline for transition and compliance.

Further, SB 346 ensures all the whole eggs and egg products sold in Hawaii meet those same standards by banning the sale of non-compliant products. This maintains a more compassionate food supply for the public and protects in-state producers by keeping locally produced eggs competitive with out-of-state operations.

Finally, SB 346 assists Hawaii’s transition to cage-free eggs that is already underway, with more than 200 restaurant and retail chains—including Foodland, Safeway, Whole Foods, Subway, and McDonald’s—committed to sourcing and selling exclusively cage-free eggs by 2025.

For these reasons, Compassion in World Farming USA urges you to vote YES on SB 346 at the upcoming Senate Judiciary committee hearing.

Thank you for your time,

RE: Testimony in support of SB 346: Relating to Farm Animals  
Tuesday, March 2, 2021, 9:35 a.m., Via Videoconference

---

Aloha Chair Rhoads, Vice Chair Keohokalole and Committee Members,

On behalf of the Hawaiian Humane Society, thank you for considering our support for Senate Bill 346, SD1, which requires farm owner or operators to confine egg-laying hens in accordance with the standards established in this measure. Effective 12/31/25, prohibits a business owner or operator from selling shell eggs or egg products that are produced by egg-laying hens that were confined in a cruel manner.

Hawaiian Humane supports the enforcement and strengthening of current laws and the implementation of humane standards for animals in every phase of animal-based food production. Hawaiian Humane opposes factory farming or any other practice that results in animals being viewed as and treated as machines. The provisions of this bill represent reasonable progress in protecting egg-laying hens from cruel forms of confinement.

We also want to acknowledge the effort that the Humane Society of the United States has put into this measure over the years. It has worked with stakeholders to improve animal welfare in ways that our local farmers can implement. That kind of collaboration makes for good legislation and we ask the committee to pass SB 346, SD1.

Mahalo for your consideration.

**RE:** Testimony in SUPPORT of Senate Bill 346 (Relating to Farm Animals)

---

Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

**I write on behalf of Animal Equality’s Hawaii members to ask for your support of SB 346 (SD1).** As a farm animal protection nonprofit, Animal Equality has long worked to improve conditions for animals used in agriculture – particularly hens in the egg industry, who are the subject of this legislation – and we have extensive scientific and legal expertise on the topic. Therefore, in addition to conveying our members’ strong message of support for this bill, we offer our knowledge and expertise on the matter, as described below.

The introduction of SB 346 makes Hawaii the latest state to take up the mantle of farm animal welfare – a bipartisan issue that continues to grow in importance across all demographics. This growing interest is borne out of an increasing public concern over the way farm animals are treated. For many, it is a deeply moral issue; for others, it is matter of food safety and public health, prompted by the scientifically proven connection between animal welfare and zoonotic disease, giving the issue an added dimension of significance in light of the COVID-19 pandemic. SB 346 addresses all of these interrelated concerns.

Most of the eggs currently sold in Hawaii come from industrial factory farms that confine hens in extremely small spaces, often in barren wire cages. A hen confined in such a manner suffers from extreme pain, psychological stress from overcrowding, and even cannibalism. The practice of confining hens in such abysmal conditions is motivated by profit, not animal welfare.

SB 346 would implement critical minimum standards for housing these sensitive, emotionally complex animals. Specifically, the bill would prohibit confining an egg-laying hen in an area smaller than 1 to 1.5 square feet per hen (depending on housing structure) and outlaws the use of cruel cages. The bill also contains a sales provision to ensure that eggs sold in Hawaii come from operations that meet these modest standards, no matter where they are produced.

Hens raised in battery cages (i.e., the vast majority of hens in the egg industry presently) live their entire lives in a space no larger than the surface of an iPad; they are unable to engage in any natural behaviors like flapping their wings, walking, perching, dustbathing, or laying eggs in nest boxes. The physical and psychological torment caused by these conditions is obvious to anyone, and many animal behaviorists agree.

Numerous other states have already enacted the critical protections SB 346 would provide for hens in Hawaii. Those states include California, Massachusetts, Oregon, Washington, Michigan, and Colorado. Similar protections are also the subject of bills pending in Arizona, Utah, and several other western states. What's more, hundreds of food companies have publicly pledged to source *only* from producers who adhere to these minimum hen welfare standards, and that roster of companies continues to grow by the day.

In short, the standards established by SB 346 will soon become the norm in the egg industry, and Hawaii is wise to join the growing ranks of states that have already legislated in recognition of this trend.

We thank you for considering this testimony, which is submitted on behalf of Animal Equality's members in Hawaii. **We hope you will vote YES on SB 346.**

Comments:

Please support SB346. It would be an important step forward for animal welfare and public health.

Imagine you are an egg-laying hen who spends its whole life in a crowded cage with other hens, so crowded that it cannot turn around. This crowding naturally causes aggression, and more aggressive hens often kill other hens, while wounds due to wire cages are pecked at by other hens.

This type of crowding is a breeding ground for viruses because the hens are in close proximity to each other, and their immune systems are compromised due to the extreme stress of living this way.

Comments:

The fact that the rate at which chickens are slaughtered is of concern tells us something about the way that these animals die, all just so that humans may eat them. We ALSO need to concern ourselves with the way that they LIVE, although it is only as long as they meet our needs for eggs and meat.

I STRONGLY SUPPORT SB 346, whose purpose it is to provide egg-laying chickens with a sanitary and comfortable living space, one in which they can stand, turn around and get an adequate amount of exercise. ALL ANIMALS deserve humane treatment!

A side benefit of this is that it will solve environmental problems and improve food safety. The primary concern, however, must be the WELFARE OF THE ANIMALS.

-----  
-----  
  
Dear Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee

On behalf of Animal Outlook, I respectfully submit the following testimony to strongly **urge you to vote “Yes” on SB 346** which is currently scheduled for hearing on March 2, 2021 before the Senate Committee on Judiciary.

Founded in 1995, Animal Outlook (formerly Compassion Over Killing) is a national 501(c)(3) organization dedicated to exposing truth and inspiring change. Every day, Animal Outlook advocates against government policies that encourage or allow cruelty to farmed animals, conducts public education on the realities of industrialized animal agriculture, coordinates public campaigns to encourage the adoption of vegan diets, and conducts undercover investigations to expose cruelty at industrialized factory farms.

SB 346 is essential to the welfare of animals in the state of Hawaii. Today, Hawaii has no law governing confinement standards for farmed animals. SB 346 will change this and allow chickens, turkeys, ducks, geese, or guinea fowl kept for the purpose of commercial egg production the most basic and fundamental dignities—to lie down, stand up, fully extend their limbs, and turn around freely. This bill will effectively ensure that thousands of egg-laying hens in Hawaii are not destined to spend their entire existence confined to tiny, cruel cages. Importantly, this law will also require that all

eggs sold in Hawaii come from operations that meet this rudimentary animal welfare standard.

Animal Outlook has witnessed firsthand the cruelty of hens kept in tiny battery cages. In a Minnesota egg factory farm, we documented thousands of suffering hens crammed in tiny wire cages packed six levels high. Our investigator recorded hens trapped and immobilized in the wires of their cages, unable to access food and water, “mummified” corpses of hens left to rot in cramped cages, and countless birds suffering broken bones, abrasions, and feather loss due to being packed together so tightly.<sup>[1]</sup> The image below is taken from our Minnesota investigation.

By establishing bare-minimum standards for animal welfare, SB 346 would significantly reduce the unfathomable suffering of countless animals due to these cruel confinement practices. In passing SB 346, Hawaii would align itself with numerous other states that have recently taken a stand against animal cruelty and passed identical laws, including California, Massachusetts, Washington, Oregon, and Michigan.

Many of the states that have already passed similar laws have factory farm confinement operations dramatically larger than Hawaii’s and have nonetheless recognized the benefits of more humane practices. For example, a 2017 USDA report observed that there were 13 million egg-laying hens in California and 14 million in Michigan, each of which has already passed a law similar to SB 346. In contrast, the combined total of 14 other states that elected not to report individually, including Hawaii, totaled only 18 million egg laying hens across all 14 states.<sup>[2]</sup> Accordingly, Hawaii’s confinement operations and the alleged “burden” of this law pale in magnitude compared to some of the other states that have already passed similar measures.

The recognition that animals deserve *at least* the very basic protections provided in SB 346 is not unique to state legislatures—more than 200 leading restaurant and grocery corporations have also recognized the cruelty inherent to these factory farm confinement practices and are requiring suppliers to switch to cage-free systems, including Foodland, Safeway, Costco, and McDonald’s.

Having documented firsthand the abject suffering of birds housed in cruelly cramped cages, Animal Outlook **strongly and respectfully urges you to pass SB 346** and establish the most basic and minimum protections for egg-laying hens in Hawaii.

Sincerely,

Will Lowrey

Counsel

Animal Outlook

Kevin O'Neill, Vice President, State Affairs, ASPCA

**RE:** Testimony in strong support of SB 346: Relating to Farm Animals

Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

On behalf of the ASPCA, the nearly 6,000 Hawaii citizens we represent and more than 2 million supporters nationwide, we write to voice our strong support of SB 346. This bill would improve the lives of millions of farm animals by ensuring they aren't raised in cruel confinement and that Hawaii isn't supporting inhumane practices by allowing the sale of products from confinement systems in the state.

Farm animals are often subject to a variety of cruel practices and living conditions, none so severe as the systems used to confine egg-laying hens. Laying hens suffer immensely, with multiple birds confined in so-called battery cages, each afforded space smaller than a sheet of printer paper. Hens raised in these cages are unable to move comfortably or fully extend their wings and this severe restriction of movement causes foot injuries, osteoporosis and extreme frustration. Battery cages provide no perches, no nests for laying eggs, no dustbathing material, no environment to forage or materials to forage for, and no ground to scratch, making it impossible for birds to perform necessary natural behaviors like nesting, perching, and dustbathing.

These practices are not only inherently inhumane, but they also lead to increased risk of food safety issues like *Salmonella* and *E Coli*. Cramming tens of thousands of birds into cages in poorly ventilated barns, left to stand in their own waste and the waste of others, creates a breeding ground for disease. This in turn endangers the health and safety of those who consume products from these farms.

SB 346 would ensure that egg-laying hens raised in Hawaii are not confined in cruel battery cages, and ensure that shell eggs sold in Hawaii meet this modest standard. The bill additionally sets clear space and enrichment requirements for laying hens to ensure that cage-free environments allow them to carry out natural behaviors, meeting their physical and emotional needs. There are a variety of more humane farming systems that don't rely on confining hens in spaces so small that can't move or carry out their natural behaviors and the ASPCA encourages the Committee to support farmers as they transition to these more humane systems.

SB 346 would bring Hawaii in line with 12 other states who have banned cruel confinement in some form, including the most recent law passed in California in 2018 which similarly banned the sale of

products from confinement systems. It supports Hawaii and the country's shift to cage-free farming, illustrated by the more than 200 companies who have already committed to transition to cage-free systems. Included among those commitments are companies like McDonald's, Costco, and Walmart, representing a huge portion of the marketplace that is changing to meet the demands of welfare-conscious consumers.

Public surveys have shown time and time again that people are concerned about the welfare of farm animals and don't want them to suffer on farms. Banning cruel confinement systems improves the lives of farm animals, reduces the risk of food-borne disease and puts Hawaii at the forefront of the movement to build a more humane farm system. For these reasons, we respectfully urge you to vote in support of SB 346 when it comes before you in committee.

Kara Shannon

Senior Manager, Farm Animal Welfare

Kevin O'Neill

**Submitted by:** Wendy Watts, Vice President, Legal and General Counsel  
The Humane League  
704-507-2260

**RE:** Testimony in STRONG SUPPORT of SB 346: Relating to Farm Animals

Dear Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

On behalf of The Humane League, a global nonprofit organization dedicated to repairing our broken food system, and our nearly 1,000 Hawaii supporters, we write to voice our strong support of SB 346.

With SB 346, the great state of Hawaii has an opportunity to end a cruel and outdated intensive confinement farming practice and dramatically improve animal welfare for egg-laying hens, mitigate the risk of disease and ill effects on human health and create a safer food supply for Hawaii families, and create market and regulatory certainty and consistency.

Hawaii currently has no law in place regarding confinement standards for egg-laying hens. Absent such a law, the vast majority of these animals are confined in a barren wire cage with 6-7 other hens without the space to lie down, stand up, fully extend their limbs, or turn around freely without touching another animal or a wire cage, causing a wide array of debilitating physical conditions. In addition, these birds have no opportunity to engage in natural behaviors such as nesting, scratching, foraging, and dustbathing, causing immense psychological stress and manifesting in stress-induced behavior and weakened immune systems.

Such intensive confinement also leads to an increased incidence of disease for these animals, requiring elevated antibiotic administration and contributing to antibiotic resistance, one of the greatest health threats facing humanity on a global scale, and elevates risks to the food supply and human health, including E. coli, Salmonella, and avian influenza.

With the passage of SB 346, Hawaii would join eight other states that have enacted legislation to ban cruel cages for egg-laying hens. In addition, as every major restaurant chain, food-service company, food manufacturer, and food retailer has made a public commitment to their customers and stakeholders to phase out the use of cages for egg-laying hens in their U.S. supply chains, enacting SB 346 would also support market and regulatory certainty with a reasonable timeline for compliance.

The Humane League supports this essential step in increasing the welfare of egg-laying hens, protecting public health, and joining the country's shift to cage-free farming. We respectfully urge this Committee to vote yes on SB 346.

Sincerely,

Wendy Watts

**RE:** Testimony in Support of SB 346: Relating to Farm Animals

Dear Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

I am writing on behalf of Farm Sanctuary and our more than 1.6 million nationwide members and constituents in strong support of SB 346, which seeks to prevent the inhumane confinement of hens exploited in egg production on factory farms.

Animals exploited for food in the U.S. are subjected to egregious cruelty and do not have adequate legal protection. Millions are confined in cages and crates so tightly that they can't walk, turn around, or even lie down comfortably. Consumers are appalled when they learn about this, and they are demanding reforms.

So far, twelve states (Arizona, California, Colorado, Florida, Kentucky, Maine, Massachusetts, Michigan, Ohio, Oregon, Rhode Island, and Washington) have enacted legislation to limit the inhumane confinement of farm animals, and we urge lawmakers in Hawaii to do so as well by enacting SB 346. This common sense measure will help to prevent unnecessary animal suffering, and it will better align agricultural practices with societal values and consumer expectations.

Like all animals, farm animals have feelings, and they deserve to be protected from cruelty. As Mahatma Gandhi famously said, "The greatness of a nation and its moral progress can be judged by the way in which its animals are treated."

To help prevent the egregious suffering experienced by hens in the egg industry, we urge your support of SB 346. Thank you very much for your time and thoughtful consideration.

Sincerely,

Gene Baur

**Re:** Testimony in strong SUPPORT of SB 346

Dear Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee,

Mercy For Animals, a global nonprofit organization with approximately 700 Hawaii supporters dedicated to creating a more compassionate food system, commends the Hawaii legislature for their consideration of SB 346 and writes in support of this bill.

The adoption of this anti-confinement legislation that allows egg-laying hens space to exhibit natural behaviors will position Hawaii as a leader in animal welfare while also protecting consumer safety, and supporting local, family farmers who have made the switch to more humane farming methods.

#### *Joining States Leading the Fight on Farm Animal Welfare*

SB 346 would be one of the most comprehensive farmed animal protection initiatives to date, and one that would promote the growth of small businesses. If enacted, Hawaii would join states like California, Washington, Michigan, Oregon, and Massachusetts in creating a more compassionate food system for egg-laying hens, consumers, and family farms.

#### *Consumer Safety*

Confining egg-laying hens in cages puts Hawaii's families at risk. Additionally, more than a dozen studies have found that salmonella is more prevalent in cage egg production than in cage-free, increasing their chance of disease.<sup>1</sup>

#### *Supporting Family Farms*

Science confirms what common sense already tells us: that locking an animal in a cage so small she can barely move causes her to suffer greatly. It's morally wrong, and numerous successful Hawaii family farms that eschew such cruelty have shown that it's completely unnecessary. The cage-free conditions outlined in SB 346 support responsible local farmers who are making the switch to more humane farming methods.

Mercy for Animals supports this important step forward in animal welfare, public health, and family farming. Thank you for considering the above comments.

Sincerely,  
Mercy For Animals

**RE: Testimony in strong SUPPORT of SB 346: Relating to Farm Animals**

Dear Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

*The Humane Society Veterinary Medical Association, a national professional veterinary organization with a focus on animal health and welfare, submits this statement on behalf of our more than 30 Hawaii veterinary professional members in supporting a phasing out of cruel cage-confinement for egg-laying hens.*

It is commonsense that animals be allowed to engage in basic movements and postural adjustments. This intuitive perspective is validated by an abundance of scientific evidence demonstrating that intensive confinement systems are detrimental to the physical and psychological welfare of farm animals and that they create public health concerns.

To cite just one notable example, the prestigious Pew Commission on Industrial Farm Animal Production—a panel of experts including a former veterinary school dean and a Secretary of the USDA—concluded “...that the most intensive confinement systems, such as . . . battery cages for poultry...prevent the animal from a normal range of movement and constitute inhumane treatment.” The Commission recommended a phase-out of the most intensive and inhumane production practices, including battery cages.

**Modern replacements for this extreme confinement method already exist, are in widespread commercial use, and are economically viable.** Cage-free systems allow hens to move freely through their environment and to engage in natural behaviors – such as dust bathing, nesting and perching – which are thwarted by battery-cage confinement.

We respectfully encourage the Senate Judiciary committee to support SB 346 to protect egg laying hens by eliminating the use of cruel cage confinement in the state and requiring that all eggs sold in Hawaii come cage-free hens. SB 346 will ensure a more humane, safer, and sustainable food system.

**Re:** Testimony in Support of SB 346\_ Relating to Farm Animals  
**'with'** amended begin date of 06-30-17

Dear Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

I'm writing to respectfully ask for your support for SB346, with the amendment I am requesting.

We are a 73 year-old farm started by my grandfather (a first generation immigrant from Okinawa), my father, and my three uncles. From the start, we have always believed in being good citizens in business and as part of our Hawaii Ohana.

In the spirit of 'We are all in this together', I think it's important to balance the merits of this Bill with what it will take to comply. Please know that the egg industry is very fragile. There are only 4 – yes only 4 -- remaining commercial egg producers left in Hawaii – down from 62. The financial investment is substantial. It will require us to borrow considerable funds (add interest and many years to repay) to completely upgrade and convert our hen houses.

Having said this, we fully understand that the future of egg production is cage-free and have made a small start to convert. We do appreciate the Bill's small-farm exemption, which helps to ensure the survival of the smallest of our remaining farms.

We will support this bill **IF** the start date of December 31, 2025 is amended to June 30, 2027.

Respectfully,

Iris Shimabukuro  
Vice President

RE: Testimony in strong support of SB 346: Relating to Farm Animals

Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

Thank you for the opportunity to provide testimony regarding SB 346. I am an ethologist, a specialist in animal behavior and I completed my doctoral work at the University of California at Davis. I am the Director of Farm Animal Welfare Science for Humane Society International, and I work with farmers to implement higher-welfare housing systems around the world. I respectfully request your support for SB 346, a bill that would require modest protections for egg-laying hens.

The confinement of animals in intensive agricultural production systems is an important issue. Consumers and food companies are increasingly concerned about how food is produced. It is well documented in scientific literature that certain aspects of intensive animal production are detrimental to the welfare of farm animals. This is particularly true for egg-laying hens confined to wire “battery cages,” which are so small the birds cannot even spread their wings. These systems prevent the expression of important natural behavior and have real physical consequences on the health and well-being of the animals. For example, the lack of normal movement and exercise is a prime cause of hen skeletal weakness in hen,<sup>1,2,3</sup> birds already prone to osteoporosis due to genetic selection for egg production. Hens in cages are unable to roost at preferred heights, dustbathe, forage or express other forms of highly motivated natural behavior, each with a particular biological function. Comfort behavior, such as stretching, wing-flapping, and preening, are also reduced or prevented in the battery-cage environment.<sup>4,5,6</sup> Cages are simply not acceptable housing environments.

To better accommodate the welfare of hens, modern cage-free housing systems have been developed, widely tested and implemented on farms around the world. In these systems, hens have access to nesting boxes, perches and loose litter. These features are designed around the natural behavior of the hens, working with, rather than suppressing, normal hen activity. Hens make good use of the nest boxes, because they prefer to lay their eggs in a darkened, enclosed space. The eggs gently roll out of the back of the nests onto an egg belt, which in an automated

**HUMANE SOCIETY  
INTERNATIONAL**

system carries them to an egg processing station at the end of the barn. When well-managed, floor eggs (those laid outside of the nests) are rare (less than 1%).

Given the trend toward cage-free housing, there is now a large body of advice and guidelines from universities, genetics companies, animal welfare certifiers and equipment manufacturers to assist egg producers in managing cage-free systems well. Cage-free egg producers are subject to the same food safety regulations that cage-egg producers must follow. Systematic comparisons of cages to cage-free systems have shown that there may even be food safety benefits to installing new, cage-free systems.<sup>7</sup> Cage-free egg production is safe, economical, and efficient.

Battery cages were widely introduced after World War II, at a time when we knew much less about the behavioral needs of animals. Confinement systems were promoted as part of a trend toward the mechanization of agriculture. There was little understanding of animals' ability to experience emotional suffering. Since then, the concept of animal welfare has evolved and become much more widely recognized, parallel to the published scientific research in animal behavior and cognition. This research has confirmed that hens are intelligent, active, inquisitive, social animals with complex needs beyond just feed, water and shelter. The application of the new science to improved animal housing designs has resulted in modern, viable, economic animal housing systems that provide more space and key resources. Modern cage-free systems for egg-laying hens are widely and successfully used around the world. In the United States, cage-free egg production has grown from about 4% of the total egg market in 2009 to over 28% in 2021. Given the recent advances in legislation, and corporate commitments to purchase only cage-free eggs, this percentage is expected to continue to grow until the entire industry is cage-free.

Like any other business, farms must keep up with market shifts and changing social norms. Producers want clarity, with feasible timelines, in order to plan for the new requirements and meet the expectations of their buyers. SB 346 sets industry-supported production guidelines and a reasonable timeline for producers to transition to cage-free housing.

Please enact SB 346 and bring Hawaii's animal production in line with the science, and with modern expectations regarding how farm animals should be housed.

Thank you very much for your time and consideration of this important matter.

A handwritten signature in cursive script that reads "Sara Shields".

Sara Shields

Comments:

Aloha,

We are a small local egg farm located in beautiful Waimanalo that produces approximately 10,000 eggs a day. We have took over this site in 2014 from the previous owner, Kaneshiro's of KK Poultry of 50 years in business. We have been in business for over 5 years now but we are still not profitable due to various changes in regulations that we have to adopt along the way. As soon as we have started, we started hearing about the future "cage-free" mandate and we had to make a drastic change in our business plan to be prepared for cage-free production which requires the completely different method and enormous cost to maintain the cage-free environment. It takes planning, funding, and more man power in cage-free farming.

Although we are not profitable, we are proud to employ very hard working local staff from our neighborhood, and we want to provide this opportunity for them as long as we can. We have been shifting our operations to cage-free for a few years now but due to Covid19, we are not able to follow our plan. 60% of our business relies on Restaurant customers, therefore, the Covid19 has impacted our revenue. It was very sad to see many of our restaurant customers closed their doors permanently and survived restaurants are struggling to stay open.

Until we conquer the Covid19, our business can't come back up to where we left off in 2019, it will be very difficult to invest our money that we don't have to cage-free conversion at this time. As we all experienced, 2020 was stolen by the Covid19 and we are still not back on our feet yet even we are already in March 2021. That being said, we are in full support of extending the date to June 30, 2027 not just for our farm's sake, but for all other local egg farms.

Thank you,

Travis Sasaki

Comments:

Aloha e Chair Rhoads, Vice Chair Keohokalole, and Honorable members of the Senate Committee on Judiciary,

Please accept this testimony in ***Support of SB346 SD1 and a proposed amendment.***

As written this measure promotes the welfare of hundreds of thousands of egg laying hens in Hawaii, readies our Islands' egg farmers for the industry's pivot to an all-cage-free commercial standard, and enhances food security for our State. In addition, SB346 SD1 creates a permission structure and the business certainty necessary for our State's newest egg farmers in Waialua to move forward with their \$100Million investment commitment, which not only adds jobs and tax revenue to our economy but also includes plans for a much needed feed mill that will reduce the cost of feed for *all* local egg producers.

**Proposed Amendment:**

Respectfully, we are **proposing an amicable amendent to SB346 SD1, changing the effective date to 6/30/2027.** In prior hearings of this measure, we have messaged that The McClellan Group, on behalf of our client - The Humane Society of The United States - has been working with local egg producers on this measure, including Hawaiian Egg Company (Hawaiian Maid Eggs / Ka Lei Eggs), Petersons' Upland Farms, OK Poultry, and Villa Rose. The proposed amendment, supported by these local egg producers, considers the impact of the COVID-19 recession on local egg farmers and accomodates the timeline necessary for our larger commercial operators to go cage-free.

The cage-free standard implemented by SB346 SD1 utilizes the industry's own definition of cage-free and reinforces the public's demand for cage-free eggs. Whole Foods, Marriott, Hilton, Hyatt, Starbucks, Taco Bell, Disney (Aulani Resort), and Sodexo are already cage-free, and 95% of Costco's eggs are already cage-free, with an announcement in December of 2020 that the balance of Costco's product offering will be cage-free in the near future. And by 2025 Walmart, Foodland, Safeway, Walgreens, Target, Subway, 7 Eleven, McDonalds, Dunkin Donuts, Four Seasons Resorts, CVS (Longs) and many other local retailers will also be entirely be cage-free.

Passing this measure affords us a rare opportunity to enact a law that marries the interests of animal welfare advocates, local consumers, and our local farmers. Mahalo for your support of SB346 SD1 and for your consideration our proposed amendment.

Me ka pono,

Kekoa McClellan

<b>Submitted By</b>	<b>Organization</b>	<b>Testifier Position</b>	<b>Present at Hearing</b>
Christopher Peterson	Individual	Comments	No

Comments:

Dear Chair Rhoads, Vice Chair Keohokalole, and Members of the Committee:

We at Petersons' Upland Farm conditionally support SB346 contingent on the allotment of more time for our local farms to transition. The earliest local farms may be able to do the transition is 6/30/2027. The current deadline will prevent local farms from succeeding. Our position is to make the transition a success by ensuring it will work for the local farms and giving them the time needed to do so.

We have supported the bill's intent in creating better lives for animals but have had mixed feelings on implementation. We all understand animal health and well being is a priority and do wish to support that cause and already work at improving conditions on our farms. However, the timeline has been a major fulcrum of contention between producers and other parties. The transition is a huge undertaking; farms will lose production and spend more money during the transition. Further it is assigned to said farms without regard to the current condition of the housing systems used, ignoring the current financial state for the farm, or investments remaining in current systems. As such the entire transition period will be marked with higher costs, more debt and lower income to retrofit new housing systems which will be exacerbated by the time frame proposed in the bill. This is why local producers need to ask for more time at the minimum to support the bill. There is a lot more financial uncertainty now than two years ago which makes the aggressive timeline shoulder more risk on our local farmers. We support the bill should the date be pushed back to 6/30/27 or afterwards and ensuring local farmers will be able to successfully navigate the transition and not be forced to close.

Thank you,

Chris Peterson

Petersons' Upland Farm LL
