Testimony in OPPOSITION to SB0923
RELATING TO POOLS

SENATOR JARRETT KEOHOKALOOLE, CHAIR
SENATE COMMITTEE ON HEALTH

Hearing Date: 2/8/2021

Room Number: VIDEO

1 **Fiscal Implications:** None

2 **Department Testimony:** The Department of Health (Department) respectfully opposes this
3 measure.

4 The proposed amendments to Hawaii Revised Statutes (HRS) Chapter 321-11, create ambiguity
5 with respect to what distinction, if any, the legislature intends to make between “pools” (existing
6 but not defined) and “swimming pools” (added and defined) in HRS Chapter 321. Additionally,
7 the proposed amendments create regulatory uncertainty by making it unclear, since this chapter
8 merely authorizes the Department to adopt rules pertaining to these subjects generally and the
9 Department already has “swimming pool” rules in Hawaii Administrative Rules (HAR), Chapter
10 11-10, exactly in what manner the legislature intends for the Department to regulate
11 pools/swimming pools.

12 The Department has a long history of regulating both “pools” and “swimming pools” and
13 continues to do so with its enforcement of HAR Chapter 11-10. The intent of the Department’s
14 rules is to ensure communicable disease transmission does not result if persons are allowed use
15 of a body of water for activities, such as swimming or bathing. The Department does not have
16 any intention to resign its authority to regulate “pools” in addition to “swimming pools”.

17 Spas, wading pools, and other bodies of water used recreationally in a public manner are
18 examples of a pool, which is not necessarily a swimming pool as this measure appears to define
19 that term, and they must continue to be regulated as it is done nationwide by health agencies to

1 prevent communicable disease transmission. Many jurisdictions now regulate “splash pads” and
2 all manners of recreational water activities at theme parks and other public venues that include
3 static or moving “pools”. These water based attractions require disinfection systems to ensure
4 the public is not put at undue risk from communicable diseases. The Department respectfully
5 submits that the existing rules in HAR Chapter 11-10 currently cover a variety of swimming
6 venues, the regulation of which this measure does not appear to fully address.

7 **Offered Amendments:** None

8 Thank you for the opportunity to testify on this measure.

Imanaka Asato
A LIMITED LIABILITY LAW COMPANY

LATE

February 8, 2021

Senator Jarrett Keohokalole, Chair
Senator Rosalyn H. Baker, Vice-Chair
Members of the Senate Committee on Health
Thirty-First Legislature, Regular Session of 2021

RE: SB 923 – RELATING TO POOLS
Hearing Date: February 8, 2021 at 1:00 p.m.

Aloha Chair Keohokalole and members of the Committee on Health,

Mahalo for the opportunity to submit testimony in SUPPORT of Senate Bill 923 – Relating to Pools. This bill establishes a new definition in Section 321-11, Hawaii Revised Statutes, for a "swimming pool" as impervious, artificial bodies of water used for swimming, diving, or recreational bathing or therapy.

Hoakalei Corporation owns the Wai Kai Lagoon in Ewa Beach, a 52-acre, basin excavated out of the coral shelf containing over 300 million gallons of groundwater. The Lagoon receives about three million gallons of groundwater naturally flowing through it to the ocean each day and has never been filled by artificial means. The water quality of the Lagoon meets or exceeds existing DOH standards mandated under Section 11-54-8, Hawaii Administrative Rules for recreational waters, is devoid of any health-related issues, and is regularly monitored by a team of scientists. Despite these facts, Hoakalei has been required to discourage swimming and other recreational uses of the Lagoon.

Amending Section 321-11, Hawaii Revised Statutes would clarify that this 52-acre lagoon is not a swimming pool and need not be regulated as such. This would also allow community members to use the Lagoon for recreational purposes and remove the cloud over the Lagoon's water quality, allowing Hoakalei10 to complete its master plan for the surrounding area. Attached to this testimony is a petition from community members in support of Senate Bill 923 and the recreational use of the Wai Kai Lagoon. For these reasons, we urge the committee to pass Senate Bill 923.

Very truly yours,

IMANAKA ASATO

Michael L. Iosua

Petition to Support Swimming Pool Definition (SB 923 & HB 104)

| | |
|--|--|
| Petition summary and background | <p>I would like to express my support for removing the DOH's restriction on swimming in the Wai Kai Lagoon. Currently, the DOH has required Hoakalei Corporation to display "Swimming is Discouraged" signs around the lagoon. There is no concern with safety, water quality or any other valid reason for restricting or even discouraging swimming in the lagoon. This is made clear through public information available at hoakaleifacts.com. In addition, it is clear that the lagoon is not a swimming pool as the lagoon is naturally filled with clean groundwater and there are various forms of wildlife that live in the lagoon. I would like to be able to use the lagoon without restrictions.</p> <p>I understand that Senate Bill 923 and House Bill 104 will revise the definition of swimming pool. Among other things, this would clarify that the Wai Kai lagoon is not a swimming pool and not required to be regulated as such.</p> |
| Action petitioned for | We, the undersigned, are concerned citizens who urge our leaders to act now to support Senate Bill 923 & House Bill 104 |

| Petition summary and background | <p>I would like to express my support for removing the DOH's restriction on swimming in the Wai Kai Lagoon. Currently, the DOH has required Hoakalei Corporation to display "Swimming is Discouraged" signs around the lagoon. There is no concern with safety, water quality or any other valid reason for restricting or even discouraging swimming in the lagoon. This is made clear through public information available at hoakaleifacts.com. In addition, it is clear that the lagoon is not a swimming pool as the lagoon is naturally filled with clean groundwater and there are various forms of wildlife that live in the lagoon. I would like to be able to use the lagoon without restrictions.</p> <p>I understand that Senate Bill 923 and House Bill 104 will revise the definition of swimming pool. Among other things, this would clarify that the Wai Kai lagoon is not a swimming pool and not required to be regulated as such.</p> |

Petition to Support Swimming Pool Definition (SB 923 & HB 104)

| | |
|--|--|
| Petition summary and background | <p>I would like to express my support for removing the DOH's restriction on swimming in the Wai Kai Lagoon. Currently, the DOH has required Hoakalei Corporation to display "Swimming is Discouraged" signs around the lagoon. There is no concern with safety, water quality or any other valid reason for restricting or even discouraging swimming in the lagoon. This is made clear through public information available at hoakaleifacts.com. In addition, it is clear that the lagoon is not a swimming pool as the lagoon is naturally filled with clean groundwater and there are various forms of wildlife that live in the lagoon. I would like to be able to use the lagoon without restrictions.</p> <p>I understand that Senate Bill 923 and House Bill 104 will revise the definition of swimming pool. Among other things, this would clarify that the Wai Kai lagoon is not a swimming pool and not required to be regulated as such.</p> |
| Action petitioned for | We, the undersigned, are concerned citizens who urge our leaders to act now to support Senate Bill 923 & House Bill 104 |

SB 293 and HB104 states (on p7 & 8):

"Swimming pool" means any publicly or privately owned artificial enclosure, structure, basin, chamber, or tank, constructed of reinforced concrete or other materials approved by the department of health that are impervious and provide a watertight structure, containing an artificial body of water that is used for swimming, diving, or recreational bathing or therapy by humans."

This legislation would more clearly define what a swimming pool is. The result would make it clear that the Department of Health does not need to regulate Haseko's lagoon as a swimming pool because it doesn't meet the definition. Although we dug a 52 acre hole 20 feet deep, the water in the lagoon and flowing through it is natural and the sides/bottom of the lagoon remains the existing natural coral too (I know, weird eh?). 3+ million gallons of groundwater flows through the lagoon to the ocean daily. The lagoon itself contains more than 300 million gallons of water.

Under the DOH's swimming pool rules, a swimming pool has to completely change 100% of the pool's water 4xs a day (once every six ours) or use chemicals for treatment. We can't change out 300+ million gallons of water four times a day, or add chemicals because it is a natural ecosystem (a special plant growing at the bottom called *chara* keeps the water clean). Visibility in the lagoon is about 8-10 feet depending on the season – so because it is 20 feet deep, there is no way to see a six inch disc at the bottom of the lagoon either. The lagoon's water quality meets the state DOH's bacteriological standards, and is cleaner than most public beaches. In other words, the water quality of the lagoon is better than most public beaches on Oahu. A different section of the DOH's rules (HAR 11-54-8, see excerpt below) regulate inland water bodies.

HAR 11-54-8 is entitled Specific criteria for recreational waters. It begins with the following:

(a) These

criteria are designed to protect the public from exposure to harmful levels of pathogens while participating in water-contact activities. The specific criteria for enterococcus shall be expressed in colony forming units (CFU) per one hundred milliliters or as

a most probable number (MPN) per one hundred milliliters, as specified by the analytical method used.

(b) Enterococcus content shall not exceed a geometric mean of 35 colony forming units per one hundred milliliters over any thirty day interval.

(c) A Statistical Threshold Value (STV) of 130 per one hundred milliliters shall be used for enterococcus. The STV shall not be exceeded by more than ten percent of samples taken within the same thirty day interval in which the geometric mean is calculated.

(d) State waters in which enterococcus content does not exceed the standard shall not be lowered in quality.

We have been following HAR 11-54-8 and regularly monitor the bacterial levels in the Lagoon in compliance with this standard. You can access the water quality monitoring of the Lagoon here: <http://www.hoakaleifacts.com/water-quality-biological-data/> To date, the Lagoon water has always been far below these threshold levels of contamination.

HAR 11-54 is available here: [https://health.hawaii.gov/cwb/files/2013/04/Clean Water Branch HAR 11-54_20141115.pdf](https://health.hawaii.gov/cwb/files/2013/04/Clean_Water_Branch_HAR_11-54_20141115.pdf) but it is not searchable.

Please let me know if you have any questions. Any assistance you can provide is greatly appreciated!

SB 293 and HB104 states (on p7 & 8):

"Swimming pool" means any publicly or privately owned artificial enclosure, structure, basin, chamber, or tank, constructed of reinforced concrete or other materials approved by the department of health that are impervious and provide a watertight structure, containing an artificial body of water that is used for swimming, diving, or recreational bathing or therapy by humans."

This legislation would more clearly define what a swimming pool is. The result would make it clear that the Department of Health does not need to regulate Haseko's lagoon as a swimming pool because it doesn't meet the definition. Although we dug a 52 acre hole 20 feet deep, the water in the lagoon and flowing through it is natural and the sides/bottom of the lagoon remains the existing natural coral too (I know, weird eh?). 3+ million gallons of groundwater flows through the lagoon to the ocean daily. The lagoon itself contains more than 300 million gallons of water.

Under the DOH's swimming pool rules, a swimming pool has to completely change 100% of the pool's water 4xs a day (once every six ours) or use chemicals for treatment. We can't change out 300+ million gallons of water four times a day, or add chemicals because it is a natural ecosystem (a special plant growing at the bottom called *chara* keeps the water clean). Visibility in the lagoon is about 8-10 feet depending on the season – so because it is 20 feet deep, there is no way to see a six inch disc at the bottom of the lagoon either. The lagoon's water quality meets the state DOH's bacteriological standards, and is cleaner than most public beaches. In other words, the water quality of the lagoon is better than most public beaches on Oahu. A different section of the DOH's rules (HAR 11-54-8, see excerpt below) regulate inland water bodies.

HAR 11-54-8 is entitled Specific criteria for recreational waters. It begins with the following:

(a) These

criteria are designed to protect the public from exposure to harmful levels of pathogens while participating in water-contact activities. The specific criteria for enterococcus shall be expressed in colony forming units (CFU) per one hundred milliliters or as

a most probable number (MPN) per one hundred milliliters, as specified by the analytical method used.

(b) Enterococcus content shall not exceed a geometric mean of 35 colony forming units per one hundred milliliters over any thirty day interval.

(c) A Statistical Threshold Value (STV) of 130 per one hundred milliliters shall be used for enterococcus. The STV shall not be exceeded by more than ten percent of samples taken within the same thirty day interval in which the geometric mean is calculated.

(d) State waters in which enterococcus content does not exceed the standard shall not be lowered in quality.

We have been following HAR 11-54-8 and regularly monitor the bacterial levels in the Lagoon in compliance with this standard. You can access the water quality monitoring of the Lagoon here: <http://www.hoakaleifacts.com/water-quality-biological-data/> To date, the Lagoon water has always been far below these threshold levels of contamination.

The lagoon itself contains more than 300 million gallons of water.

Under the DOH's swimming pool rules, a swimming pool has to completely change 100% of the pool's water 4xs a day (once every six ours) or use chemicals for treatment. We can't change out 300+ million gallons of water four times a day, or add chemicals because it is a natural ecosystem (a special plant growing at the bottom called *chara* keeps the water clean). Visibility in the lagoon is about 8-10 feet depending on the season – so because it is 20 feet deep, there is no way to see a six inch disc at the bottom of the lagoon either. The lagoon's water quality meets the state DOH's bacteriological standards, and is cleaner than most public beaches. In other words, the water quality of the lagoon is better than most public beaches on Oahu. A different section of the DOH's rules (HAR 11-54-8, see excerpt below) regulate inland water bodies.

HAR 11-54-8 is entitled Specific criteria for recreational waters. It begins with the following:

(a) These

criteria are designed to protect the public from exposure to harmful levels of pathogens while participating in water-contact activities. The specific criteria for enterococcus shall be expressed in colony forming units (CFU) per one hundred milliliters or as

a most probable number (MPN) per one hundred milliliters, as specified by the analytical method used.

(b) Enterococcus content shall not exceed a geometric mean of 35 colony forming units per one hundred milliliters over any thirty day interval.

(c) A Statistical Threshold Value (STV) of 130 per one hundred milliliters shall be used for enterococcus. The STV shall not be exceeded by more than ten percent of samples taken within the same thirty day interval in which the geometric mean is calculated.

(d) State waters in which enterococcus content does not exceed the standard shall not be lowered in quality.

We have been following HAR 11-54-8 and regularly monitor the bacterial levels in the Lagoon in compliance with this standard. You can access the water quality monitoring of the Lagoon here: <http://www.hoakaleifacts.com/water-quality-biological-data/> To date, the Lagoon water has always been far below these threshold levels of contamination.

HAR 11-54 is available here: https://health.hawaii.gov/cwb/files/2013/04/Clean_Water_Branch_HAR_11-54_20141115.pdf but it is not searchable.

Date

SB 293 and HB104 states (on p7 & 8):

"Swimming pool" means any publicly or privately owned artificial enclosure, structure, basin, chamber, or tank, constructed of reinforced concrete or other materials approved by the department of health that are impervious and provide a watertight structure, containing an artificial body of water that is used for swimming, diving, or recreational bathing or therapy by humans."

This legislation would more clearly define what a swimming pool is. The result would make it clear that the Department of Health does not need to regulate Haseko's lagoon as a swimming pool because it doesn't meet the definition. Although we dug a 52 acre hole 20 feet deep, the water in the lagoon and flowing through it is natural and the sides/bottom of the lagoon remains the existing natural coral too (I know, weird eh?). 3+ million gallons of groundwater flows through the lagoon to the ocean daily. The lagoon itself contains more than 300 million gallons of water.

Under the DOH's swimming pool rules, a swimming pool has to completely change 100% of the pool's water 4xs a day (once every six ours) or use chemicals for treatment. (b) Enterococcus content shall not exceed a geometric mean of 35 colony forming units per one hundred milliliters over any thirty day interval.

(c) A Statistical Threshold Value (STV) of 130 per one hundred milliliters shall be used for enterococcus. The STV shall not be exceeded by more than ten percent of samples taken within the same thirty day interval in which the geometric mean is calculated.

(d) State waters in which enterococcus content does not exceed the standard shall not be lowered in quality.

We have been following HAR 11-54-8 and regularly monitor the bacterial levels in the Lagoon in compliance with this standard. You can access the water quality monitoring of

the Lagoon here: [http://www.hoakaleifacts.com/water-quality-biological-](http://www.hoakaleifacts.com/water-quality-biological-data/)

[data/](http://www.hoakaleifacts.com/water-quality-biological-data/) To date, the Lagoon water has always been far below these threshold levels of contamination.

HAR 11-54 is available here: https://health.hawaii.gov/cwb/files/2013/04/Clean_Water_Branch_HAR_11-54_20141115.pdf but it is not searchable.

Please let me know if you have any questions. Any assistance you can provide is greatly appreciated!

Thank you

SB 293 and HB104 states (on p7 & 8):

"Swimming pool" means any publicly or privately owned artificial enclosure, structure, basin, chamber, or tank, constructed of reinforced concrete or other materials approved by the department of health that are impervious and provide a watertight structure, containing an artificial body of water that is used for swimming, diving, or recreational bathing or therapy by humans."

This legislation would more clearly define what a swimming pool is. The result would make it clear that the Department of Health does not need to regulate Haseko's lagoon as a swimming pool because it doesn't meet the definition. Although we dug a 52 acre hole 20 feet deep, the water in the lagoon and flowing through it is natural and the sides/bottom of the lagoon remains the existing natural coral too (I know, weird eh?). 3+ million gallons of groundwater flows through the lagoon to the ocean daily. The lagoon itself contains more than 300 million gallons of water.

Under the DOH's swimming pool rules, a swimming pool has to completely change 100% of the pool's water 4xs a day (once every six ours) or use chemicals for treatment. We can't change out 300+ million gallons of water four times a day, or add chemicals because it is a natural ecosystem (a special plant growing at the bottom called *chara* keeps the water clean). Visibility in the lagoon is about 8-10 feet depending on the season – so because it is 20 feet deep, there is no way to see a six inch disc at the bottom of the lagoon either. The lagoon's water quality meets the state DOH's bacteriological standards, and is cleaner than most public beaches. In other words, the water quality of the lagoon is better than most public beaches on Oahu. A different section of the DOH's rules (HAR 11-54-8, see excerpt below) regulate inland water bodies.

HAR 11-54-8 is entitled Specific criteria for recreational waters. It begins with the following:

(a) These

criteria are designed to protect the public from exposure to harmful levels of pathogens while participating in water-contact activities. The specific criteria for enterococcus shall be expressed in colony forming units (CFU) per one hundred milliliters or as

a most probable number (MPN) per one hundred milliliters, as specified by the analytical method used.

(b) Enterococcus content shall not exceed a geometric mean of 35 colony forming units per one hundred milliliters over any thirty day interval.

(c) A Statistical Threshold Value (STV) of 130 per one hundred milliliters shall be used for enterococcus. The STV shall not be exceeded by more than ten percent of samples taken within the same thirty day interval in which the geometric mean is calculated.

(d) State waters in which enterococcus content does not exceed the standard shall not be lowered in quality.

We have been following HAR 11-54-8 and regularly monitor the bacterial levels in the Lagoon in compliance with this standard. You can access the water quality monitoring of the Lagoon here: <http://www.hoakaleifacts.com/water-quality-biological-data/> To date, the Lagoon water has always been far below these threshold levels of contamination.

HAR 11-54 is available here: https://health.hawaii.gov/cwb/files/2013/04/Clean_Water_Branch_HAR_11-54_20141115.pdf but it is not searchable.

Petition to Support Swimming Pool Definition (SB 923 & HB 104)

| | |
|--|--|
| Petition summary and background | <p>I would like to express my support for removing the DOH's restriction on swimming in the Wai Kai Lagoon. Currently, the DOH has required Hoakalei Corporation to display "Swimming is Discouraged" signs around the lagoon. There is no concern with safety, water quality or any other valid reason for restricting or even discouraging swimming in the lagoon. This is made clear through public information available at hoakaleifacts.com. In addition, it is clear that the lagoon is not a swimming pool as the lagoon is naturally filled with clean groundwater and there are various forms of wildlife that live in the lagoon. I would like to be able to use the lagoon without restrictions.</p> <p>I understand that Senate Bill 923 and House Bill 104 will revise the definition of swimming pool. Among other things, this would clarify that the Wai Kai lagoon is not a swimming pool and not required to be regulated as such.</p> |
| Action petitioned for | We, the undersigned, are concerned citizens who urge our leaders to act now to support Senate Bill 923 & House Bill 104 |

Petition to Support Swimming Pool Definition (SB 923 & HB 104)

| | |
|--|--|
| Petition summary and background | <p>I would like to express my support for removing the DOH's restriction on swimming in the Wai Kai Lagoon. Currently, the DOH has required Hoakalei Corporation to display "Swimming is Discouraged" signs around the lagoon. There is no concern with safety, water quality or any other valid reason for restricting or even discouraging swimming in the lagoon. This is made clear through public information available at hoakaleifacts.com. In addition, it is clear that the lagoon is not a swimming pool as the lagoon is naturally filled with clean groundwater and there are various forms of wildlife that live in the lagoon. I would like to be able to use the lagoon without restrictions.</p> <p>I understand that Senate Bill 923 and House Bill 104 will revise the definition of swimming pool. Among other things, this would clarify that the Wai Kai lagoon is not a swimming pool and not required to be regulated as such.</p> |
| Action petitioned for | We, the undersigned, are concerned citizens who urge our leaders to act now to support Senate Bill 923 & House Bill 104 |

Petition to Support Swimming Pool Definition (SB 923 & HB 104)

Petition summary and background

I would like to express my support for removing the DOH's restriction on swimming in the Wai Kai Lagoon. Currently, the DOH has required Haakale Corporation to display "Swimming is Discouraged" signs around the lagoon. There is no concern with safety, water quality or any other valid reason for restricting or even discouraging swimming in the lagoon. This is made clear through public information available at <http://www.hawaii.gov/doh/>. In addition, it is clear that the lagoon is not a swimming pool as the lagoon is naturally filled with clean groundwater and there are various forms of wildlife that live in the lagoon. I would like to be able to use the lagoon without restrictions.

I understand that Senate Bill 923 and House Bill 104 will revise the definition of swimming pool. Among other things, this would clarify that the Wai Kai lagoon is not a swimming pool and not required to be regulated as such.

Action petitioned for

We, the undersigned, are concerned citizens who urge our leaders to act now to support Senate Bill 923 & House Bill 104

Petition to Support Swimming Pool Definition (SB 923 & HB 104)

| | |
|--|--|
| Petition summary and background | <p>I would like to express my support for removing the DOH's restriction on swimming in the Wai Kai Lagoon. Currently, the DOH has required Hoakalei Corporation to display "Swimming is Discouraged" signs around the lagoon. There is no concern with safety, water quality or any other valid reason for restricting or even discouraging swimming in the lagoon. This is made clear through public information available at hoakaleifacts.com. In addition, it is clear that the lagoon is not a swimming pool as the lagoon is naturally filled with clean groundwater and there are various forms of wildlife that live in the lagoon. I would like to be able to use the lagoon without restrictions.</p> <p>I understand that Senate Bill 923 and House Bill 104 will revise the definition of swimming pool. Among other things, this would clarify that the Wai Kai lagoon is not a swimming pool and not required to be regulated as such.</p> |
