Comments:

Certain high school math classes should be using Pearson digital textbooks and teaching the students math through the Spreadsheet perspective. It would be cheaper on parents too, because of scientific calculator costs.

All students should be proficient in Google and Microsoft Suites prior to high school graduation. They should be knowledgeable about how to create unique and original digital content.

Additionally, students in other countries become proficient in other languages by the time the children are 8-10 years old. We should be serving our Pacific communities by making other Pacific languages available in the classroom settings.
