9:00 AM  
State Capitol, Conference Room 325 and Videoconference

In Support of  
**HB 2517**

## **RELATING TO RENEWABLE ENERGY.**

Chair Lowen, Vice Chair Cochran, and members of the Committee, the Hawai'i State Energy Office (HSEO) strongly supports HB 2517 that authorizes the counties to establish, by ordinance, an opt-in program that allows an annual payment in lieu of real property taxes on the land or improvements thereon that are actively used to produce or store renewable energy sold to an electric utility.

This measure provides an essential option that may be used by counties at their discretion as an alternative to using the real property tax methodology associated with renewable energy projects. As pointed out in the bill and confirmed by HSEO in its own research, express permission granted by the Legislature through HB 2517 is necessary to allow counties to pursue and adopt such an alternative approach.

This measure does not impose a requirement upon counties. Instead, it offers counties the option to set payments on a per megawatt nameplate capacity basis in lieu of a property tax assessment that might default to a highest and best use scenario that county and state policy makers may deem to be inconsistent with the state's clean energy and decarbonization policies. By greatly reducing development risk and costs, the optional approach set forth in this bill provides predictability for all parties involved. The benefits to the state upon passage and adoption by one or more of the counties

would be improved prices for power purchase agreements and lower rates for electricity ratepayers and customers. It also would provide counties, such as the City and County of Honolulu, a preferable long-term solution to stop-gap solutions, i.e, Ordinance 21-32 due to its complexity and lack of clarity. HSEO confirmed with the City and County of Honolulu that the provisions of this bill are necessary for the County to take this approach, which upon passage would likely be pursued.

In closing, HSEO views HB 2517 as an essential measure to help restore consistency and predictability for future tax revenues of counties by reducing the risk that future renewable energy projects will either be more costly or will not be pursued. Passage will ensure Hawaii continues its progress on replacing fossil fueled electricity generation facilities, reducing exposure to oil price volatility, and advancing the state's renewable energy and energy affordability goals.

If this measure were to be adopted, HSEO pledges its support to the counties that choose to seek adoption of ordinances for an in-lieu payment program relating to renewable energy projects.

Thank you for the opportunity to testify.

and Members of the Committee on Energy and  
Environmental Protection  
State Capitol  
415 South Beretania Street  
Honolulu, Hawaii 96813

Dear Chair Lowen, Vice-Chair Cochran and Committee Members:

**SUBJECT: Testimony in Support of House Bill No. 2517 (2024)**  
Hearing: Tuesday, January 30, 2024, 9:00 a.m., Room 325 via  
videoconference

The Department of Budget and Fiscal Services, City and County of Honolulu ("BFS") supports House Bill 2517 (2024) ("HB 2517"), which gives authority to the counties to enact an ordinance to establish a payment in-lieu-of-property-tax program. The payment in-lieu-of-property-tax program would allow, in lieu of real property taxes, an annual payment based upon megawatt AC nameplate capacity to the counties from independent renewable energy producers who produce or store renewable energy for sale to an electric utility under a power purchase contract primarily for public consumption.

The City supports the State's goal of reaching a one hundred percent (100%) renewable portfolio standard by December 31, 2045. Real property values and the taxes thereon may fluctuate, and occasionally spike, due to factors such as mortgage interest rates, housing inventory levels and demand, and the general state of the economy. The payment in-lieu-of-property-tax program described in HB 2517 may provide financial certainty to renewable energy producers under long-term power purchase contracts, while also minimizing lost revenues to the counties.

The Honorable Nicole E. Lowen, Chair  
The Honorable Elle Cochran, Vice-Chair  
and Members of the Committee on Energy and  
Environmental Protection

January 29, 2024

HOUSE COMMITTEE ON ENERGY & ENVIRONMENTAL PROTECTION  
Tuesday, January 30, 2024 — 9:00 a.m.

**Ulupono Initiative supports HB 2517, Relating to Renewable Energy.**

Dear Chair Lowen and Members of the Committee:

My name is Micah Munekata, and I am the Director of Government Affairs at Ulupono Initiative. We are a Hawai'i-focused impact investment firm that strives to improve the quality of life throughout the islands by helping our communities become more resilient and self-sufficient through locally produced food, renewable energy, clean transportation choices, and better management of freshwater resources.

**Ulupono supports HB 2517**, which allows the counties to establish, by ordinance, an opt-in program that allows an annual payment in lieu of real property taxes on the land or improvements thereon that are actively used to produce or store renewable energy that is sold to an electric utility.

Ulupono supports the State's commitment to generate 100% of its electricity from renewable energy sources by 2045. In addition, the Hawai'i State Energy Office recently published its Hawai'i Pathways to Decarbonization Report, which identifies, among other things, the significant need for additional renewable energy generation to meet broader economy-wide decarbonization goals.<sup>1</sup> To achieve these goals, all counties will undoubtedly need to rely on commercial-scale renewable energy projects. Ulupono supports the intent of this measure to ease the newly created tax burden on certain renewable energy projects.

Ulupono believes that counties should also be cognizant of the process by which renewable energy developers establish their pricing. Increasing property taxes for existing and future renewable energy projects will almost certainly increase the cost of renewable energy and affect the viability/timeline of renewable energy projects in development, slowing the pace at which Hawai'i can achieve its 2045 clean energy goal.

We appreciate the State's attempt to allow positive county alternatives to support renewable energy projects across Hawai'i.

Thank you for the opportunity to testify.

Respectfully,

Micah Munekata  
Director of Government Affairs

**Hawaii Solar Energy Association**  
*Serving Hawaii Since 1977*

**Testimony of the Hawaii Solar Energy Association (HSEA) Regarding HB2517, Relating to Renewable Energy, Before the House Committee on Energy and Environmental Protection**

**Tuesday, January 30, 2024**

Dear Chair Lowen, Vice Chair Cochran, and committee members,

The Hawaii Solar Energy Association (HSEA) **strongly supports HB2517**, which enables the City and Counties to establish a commercial property assessed clean energy (C-PACE) program.

HSEA members include the majority of locally owned and operated renewable energy companies doing business in the state of Hawaii along with leading global cleantech manufacturers and service providers that invest and sell in our market. We employ thousands of residents in diverse green economy jobs that are innovating, designing, and building Hawaii's pathway to a renewable energy future. We advocate for policies that help Hawaii achieve critical climate and resilience goals by enabling residents and businesses to invest in and benefit from the transition to clean energy.

Hawaii is a global leader in distributed solar and energy storage installations. These investments bring system energy costs down, save money on utility bills, and provide clean and resilient sources of power for residents and businesses. A number of difficult-to-reach market segments remain in Hawaii, including commercial, multi-family, and low-to-moderate income (LMI) communities; and a recent spike in interest rates and financing costs has placed a further burden on the ability to fund new investments. Other critical resilience measures also need to find sources of funding such as cesspool mitigation, energy efficiency, and roofing retrofits. Under the right circumstances, C-PACE offers an innovative, cost-effective financing solution for these types of measures, and as an island community, we need to increase the pace of investment in these necessary public policy priorities and needs.

Thank you for allowing HSEA to testify in **strong support** of HB2517.

Respectfully,

***/s/ Rocky Mould***

RE: HB 2517 Relating to Renewable Energy – In Support

Aloha Chair Lowen, Vice Chair Cochran and members of the Committee:

Clearway Energy is in strong support of HB 2517, which allows the counties to establish, by ordinance, an opt-in program that allows an annual payment in lieu of real property taxes on the land or improvements thereon that are actively used to produce or store renewable energy that is sold to an electric utility.

This bill addresses the importance of policy certainty in enabling the financing, construction, and operation of renewable energy projects in Hawaii. Long-term certainty relating to the structure of property taxation for renewable energy projects is essential for the State to be able to achieve its ambitious renewable energy goals. This bill gives the Counties another potential policy approach for achieving these goals by way of a Payment in Lieu of Taxes (PILOT).

To make both investment and sustainable operation viable, renewable energy projects must be able to maintain relatively stable expenses and revenues over time. All of Clearway's projects, as well as other utility-scale renewable energy projects with Hawaiian Electric, are contracted under long-term, fixed-price power purchase agreements. These fixed-price contracts provide 100% of the ongoing revenue to the projects and must cover all operating expenses along with the projects' debt service. The cost and availability of financing for renewable energy projects is dependent upon the risk and variability in the projects' revenues and expenses. Fixed-price contracts typically enable low financing costs, reducing the total cost of the project and enabling greater ratepayer savings - but this is only possible if variability in expenses, including property taxes, can also be controlled.

Because it takes years to develop and construct utility-scale renewable energy projects, developers must estimate the property taxes to be paid over the term of the contract at the time they submit bids into a competitive solicitation. While project budgets are set to accommodate normal variability in property taxes over time, they cannot accommodate a change in land classification for real property tax purposes or a change in the assessment method for land or equipment that would result in taxes being substantially different from the status quo as of the time the projects were contracted.

If the Counties had the authority to and were to, in fact, provide a fixed option such as a payment in lieu of taxes (PILOT) that could be reliably calculated upfront for the duration of the project's contract, this would reduce uncertainty and would make possible even lower cost financing for renewable energy projects, which would translate to lower power prices for utility ratepayers.

Thank you for the opportunity to submit testimony in support. We ask for your favorable consideration in passing this measure.

RE: HB 2517 Relating to Renewable Energy – In Support

Aloha Chair Lowen, Vice Chair Cochran and members of the Committee:

I am writing to express my support for HB 2517, on behalf of Longroad Energy. I have worked in renewable energy development in Hawai'i for the past 16 years for several different development companies and have led the development of about 50% of the utility scale wind and solar projects that are operating today in our state.

One of the risks in developing large energy projects in Hawai'i is that a county could decide to increase property tax rates **after** an energy project has locked in its price in a contract with the utility – or even after a project has finished construction. This happened to First Wind on Maui. After the Kaheawa Wind project was built and began operating, Maui County increased property taxes on wind energy projects, and the project's tax bill went up significantly, with no way to adjust pricing to compensate. More recently, in the City and County of Honolulu, a change in interpretation of tax rules led to a significant increase in property taxes for some large solar projects that had already been completed. Of course, counties should be able to set property taxes as they deem appropriate, but energy projects need some certainty in their future tax payments, so they can continue to build clean energy projects and keep energy prices as low as possible and reduce electricity costs to consumers.

The proposed bill would allow counties to set a predictable dollar amount, in the form of a payment in lieu of taxes. If passed, the bill would establish a mechanism to enable counties to receive substantial revenue from large energy projects -- and enable energy developers to make a predictable payment, for the duration of the project. Counties are not required to implement this bill; but it offers them an alternative to facilitate more clean energy projects on their islands.

This bill will encourage more energy companies to do business in Hawaii, raise more revenue for counties, and help **reduce electricity bills for Hawai'i's residents and businesses.**

We ask for your favorable consideration in passing HB 2517. Thank you.

Mahalo,
