#### SB 1456 – RELATING TO RESTORATION OF BEACH LANDS

Chair Dela Cruz, Vice Chair Moriwaki, and Members of the Committee:

The University of Hawai‘i Sea Grant College Program (Hawai‘i Sea Grant) and the Climate Resilience Collaborative (CRC) support Senate Bill 1456, which amends the definition of beach restoration to include activities undertaken to maintain and improve eroded beaches and degraded dune systems through the management of sand and native vegetation, placement of sand, and activities undertaken to remove abandoned and remnant materials that pose a risk to public and ecosystem health.

Hawai‘i Sea Grant and CRC support this measure because it will enable the Department of Land and Natural Resources (DLNR) to more effectively maintain and improve beaches and the health of coastal resources and support sustainable climate adaptation statewide. Broadening the definition of beach restoration provides more flexibility to utilize dedicated funds for the best use for beach management and allows for more comprehensive coastal management strategies to be applied statewide. Hawai‘i Sea Grant and CRC support the amendments proposed by DLNR to improve this bill.

Hawai‘i Sea Grant’s mission is to provide integrated research, extension, and education activities that increase understanding and use of ocean and coastal resources of the Hawaiian and Pacific Islands and support the informed personal, policy, and management decisions that are integral to realizing this vision. Hawai‘i Sea Grant is part of a national network of 34 university-based programs associated with the National Oceanic and Atmospheric Administration that promote better understanding, conservation, and use of coastal resources.

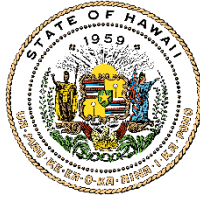

CRC is a multi-investigator research project at the University of Hawai‘i at Mānoa focused on sea level rise adaptation and climate resilience. CRC is updating coastal models that project the impacts of sea level rise.

The research that goes into identifying Hawai'i's exposure to sea level rise and the historical patterns of coastal erosion have been developed by the University of Hawai'i, School of Ocean and Earth Science and Technology. CRC and Hawai'i Sea Grant are available to provide updated sea level rise data and projections and examples of relevant adaptation to the Committee or any lawmaker upon request.

Thank you for the opportunity to testify on this measure.

In consideration of  
SENATE BILL 1456  
RELATING TO RESTORATION OF BEACH LANDS

Senate Bill 1456 proposes to amend the definition of “beach restoration” in used in laws governing the Board of Land and Natural Resources’ powers to engage in beach restoration to include activities undertaken to improve eroded beaches and degraded dune systems through the management of sand and native vegetation, placement of sand, and activities undertaken to remove abandoned and remnant materials that pose a risk to public and ecosystem health. **The Department of Land and Natural Resources (Department) strongly supports the bill.**

The Department administers the beach restoration program for the state via the Office of Conservation and Coastal Lands (OCCL). The beach fund can be used to provide grants to counties, nongovernmental organizations and the University of Hawai‘i for the restoration of beach lands.

Currently “beach restoration” by definition is limited to the placement of sand on a beach from outside sources such as streams, harbors, quarries, and offshore sand sources. In recent years community organizations have expressed an interest in conducting related nature-based activities, such as dune restoration, to promote a naturally resilient shoreline.

The Department supports broadening the types of community-supported activities covered by the definition of “beach restoration.” Including dune restoration, sand pushing, removal of derelict structures in the definition of “beach restoration” will enable OCCL to support a full suite of nature-based activities proven to enhance the public trust, promote resilience, and encourage community engagement.

Mahalo for the opportunity to provide testimony in support of this measure.

Testimony Presented Before the  
Senate Committee on Ways and Means

Rick Egged, President  
Waikiki Beach Special Improvement District Association

## SB 1456 – RELATING TO RESTORATION OF BEACH LANDS

Chair Dela Cruz, Vice Chair Moriwaki and honorable members of the committee:

**The Waikiki Beach Special Improvement District Association (WBSIDA) is pleased to provide this testimony in support of SB 1456**, which amends the definition of beach restoration to include activities undertaken to maintain and improve eroded beaches and degraded dune systems through the management of sand and native vegetation, placement of sand, and activities undertaken to remove abandoned and remnant materials that pose a risk to public and ecosystem health.

The WBSIDA supports this measure because it will empower the Department of Land and Natural Resources (DLNR) to more efficiently maintain and enhance our beaches, strengthen the health of coastal resources, and promote sustainable climate adaptation efforts across the state. Expanding the definition of beach restoration will provide greater flexibility in utilizing dedicated funds for optimal beach management, allowing for the implementation of more comprehensive coastal management strategies statewide including Waikiki Beach.

Expanding the definition of beach restoration offers significant benefits by allowing the DLNR to address a broader range of coastal challenges. It enables the DLNR to adapt to the changing needs of Hawaii's beaches and shorelines, from mitigating erosion to enhancing natural habitats and addressing the impacts of climate change. With more flexibility in funding and strategy implementation, DLNR can respond more effectively to urgent and evolving coastal concerns, improving the resilience of beaches and protecting vital ecosystems for future generations. This expansion ensures a more holistic approach to coastal management, fostering long-term sustainability for both the environment and local communities.

Thank you for the opportunity to testify on this measure.

Re: Testimony in SUPPORT of SB 1456, Relating to Restoration of Beach Lands  
Hearing: Thursday, February 27, 2025, 10:26 AM CR 211 & Videoconference

To: The Honorable Chair Dela Cruz, Vice Chair Moriwaki, and Members of the  
Committee

**Surfrider Foundation Hawai'i Region strongly supports Senate Bill 1456** which amends the definition of beach restoration to reflect the types of actions which would improve beach health.

Surfrider Foundation is a grassroots activist network dedicated to the protection of our oceans, waves, and beaches. Through our Coast & Climate initiative and Climate Action Program we center a 'living shoreline' approach to coastal land management prioritizing actions that maintain and improve degraded dune systems including dune planting. We engage the community in dune restoration events and beach cleanups to improve the health of the beaches, many that our members frequent for recreational activities.

The previous definition of beach restoration is too narrow to effectively encompass necessary management activities. The amended definition would allow the Division of Land and Natural Resources (DLNR) to more comprehensively manage coastal lands including dune planting and vegetation management. The new definition would also strategically increase coastal management capacity by recognizing the important work being done by community groups that care for public lands as restorative to beach resources and allow for partnership on smaller projects.

SB1456 also expands the definition of beach restoration to include the removal of abandoned remnant materials that pose a risk to coastal ecosystems and public health including expired emergency armoring measures and old WWII structures. Hawai'i's beaches are plagued with discarded temporary erosion measures including geotextile erosion skirts and sand burritos. While emergency permits specify a short time period before they need to be removed, oftentimes on account of sand migration and wave action, these erosion measures become covered and are never removed. The lifespan of many of these geo-textile fabrics are long

outlived and they degrade- further polluting the ocean, waves, and beaches. The inclusion of removal of abandoned remnant materials within beach restoration is a vital step to cleaning up our beaches from materials that pose a public health risk to ocean users and the environment.

In summary, Surfrider Foundation Hawai'i Region strongly supports SB1456 as a common sense amendment to Section 171-151, Hawaii Revised Statutes.

Mahalo for your time and the opportunity to provide testimony.

Sincerely,

Hanna Lilley  
Hawai'i Regional Manager  
Surfrider Foundation

Comments:

Chair Dela Cruz and Members of the Ways and Means Committee. My wife Deborah and I both support SB1456 that improves the definition of beach restoration. The changes include the management of sand and native vegetation, placement of sand, and activities undertaken to remove abandoned and remnant materials that pose a risk to public and ecosystem health. These are necessary changes to improve ongoing efforts to maintain valuable beach resources for us all. Thank you for your support.

Comments:

Regarding restoration of beach lands

Considering the rapid loss of beach area on the kingdom of Hawai'i, it is of significant importance to put our eyes on this issue. There is constant loss of native flora and fauna which is putting in a critical state the condition of ecosystems. The funds provided will be valuable to the restoration and conservation of these common areas which are not only used by locals but tourists as well every day.

Comments:

SB 1456 makes small changes to the existing restoration policy that can make a big difference on the stability of our coast. It allows the state to use new tools to access and use best practices for protecting our coast lines which are under threat from sea level rise. Please pass this bill.

Aloha, Chair Vice Chair and Committee Members,

*I'm writing in strong support of this bill that supports the restoration of our beaches. The amended definition of beach restoration helps DLNR more effectively manage coastal lands, including dune planting and vegetation management. It also acknowledges the crucial role of community groups in caring for public lands and encourages partnerships for smaller projects. This bill goes a step further by including the removal of abandoned materials that harm coastal ecosystems and public health. Many of these materials get buried and forgotten, slowly breaking down and polluting our beaches and ocean. I fully support this bill as a smart, practical update to Hawaii's coastal management laws. Mahalo for your leadership on this issue.*

*Aloha, Stuart Coleman, Hibiscus Pl., Hon., HI 96815*
