The Honorable Ronald D. Kouchi,
President and Members of the Senate
Thirty-third State Legislature
State Capitol, Room 409
Honolulu, Hawaii 96813

The Honorable Nadine K. Nakamura,
Speaker
and Members of the House of
Representatives
Thirty-third State Legislature
State Capitol, Room 431
Honolulu, Hawaii 96813

Dear President Kouchi, Speaker Nakamura, and Members of the Legislature:

For your information and consideration, I am transmitting a copy of the required report on Environmental Response Law and Hawaii Emergency Planning and Community Right to Know Act Financial and Environmental Site Information for Fiscal Year 2024, pursuant to Section 128D and 128E, Hawaii Revised Statutes.

In accordance with Section 93-16, Hawaii Revised Statutes, I am also informing you that the report may be viewed electronically at:

<https://health.hawaii.gov/opppd/departments-of-health-reports-to-2025-legislature/>

Sincerely,

A handwritten signature in black ink, appearing to read "Ken Fink".

EXECUTIVE SUMMARY
REPORT ON THE ENVIRONMENTAL RESPONSE REVOLVING FUND
FOR FISCAL YEAR 2024

Chapter 128D, HRS, Environmental Response Law, and
Chapter 128E, HRS Hawaii Emergency Planning and Community Right-to-Know Act

This report, prepared by the State of Hawaii Department of Health (DOH), Environmental Health Administration (EHA), Hazard Evaluation and Emergency Response (HEER) Office, complies with the Hawaii Environmental Response Law (HERL), Chapters 128D and 128E, Hawaii Revised Statutes (HRS) requiring the DOH to report to the State Legislature on the Environmental Response Law and Hawaii Emergency Planning and Community Right to Know Act (HEPCRA).

The report presents the Fiscal Year 2023 accounting of Chapter 128D, HRS, Environmental Response Revolving Fund (ERRF) budget and expenditures for five Environmental Health Administration (EHA) programs. The report also presents an accounting of Chapter 128E, HRS, HEPCRA Tier II filing fees collected and distributed for FY2023.

ERRF Supports Environmental Health Administration

Prior to FY2016, the ERRF funded five Environmental Health Administration (EHA) programs with 31 occupied positions. They are the Hazard Evaluation and Emergency Response (HEER) Office, Environmental Management Division (EMD), Clean Water Branch (CWB), Safe Drinking Water Branch (SDWB), and the Solid and Hazardous Waste Branch (SHWB). Due to rapidly declining barrel tax revenues, the 2015 Legislature changed the means of financing for all 31 occupied positions from ERRF to general funds and eliminated 10 vacant positions, effective July 1, 2015. The legislative changes enacted removed certain uses of the fund, returning the focus to removal, remediation, and detection of oil and pollutant or contaminant releases; and removal and remediation of hazardous waste and any other solid, liquid, or gaseous substance that may harm the environment. Concurrently, the 2015 Legislature reduced the corresponding 2016 appropriations to the affected programs: HEER <\$1,132,230>, CWB <\$324,891>, SDWB <\$457,532>, and SHWB <\$892,793>.

Revenue

ERRF generates revenue in variable amounts during any given year from the fines, penalties, and interest earned by the environmental programs. A primary source of funding for the ERRF is the 5-cent share of the “environmental response tax” (ERT) which levies a \$1.05 tax on each barrel of oil shipped into Hawaii.

The General Fund receives sixty cents of the barrel tax. The Department of Business, Economic Development and Tourism (DBEDT), Energy Security Special Fund and the Energy Systems Development Fund, and the Hawaii Department of Agriculture (DOA), Agricultural Development and Food Security Special Fund receive the remaining 40 cents.

In 2015, the Legislature expanded HRS Section 243-3.5(b)(1) to include other fossil fuels by levying a 19-cent tax on each one million British thermal units (MMBtu) of fossil fuel sold by a distributor. The Department of Taxation (DOTAX) Annual Reports for the fiscal years 2019, 2020, 2021, 2022, 2023 and 2024 state that the tax was levied on 7.9, 5.9, 4.6, 5.3, 6.3 and 5.8 million MMBtu of non-petroleum fossil fuels respectively. The ERRF is allocated a 4.8 per cent share of this additional tax revenue.

In addition, fines and penalties generated by the Hazard Evaluation and Emergency Response Office, Clean Water Branch (CWB), Safe Drinking Water Branch (SDWB), Solid and Hazardous Waste Branch (SHWB), Clean Air Branch (CAB), and the Indoor and Radiological Health Branch (IRHB) are deposited into the ERRF. ERT revenue to DOH in FY2024 was \$1,306,010 which includes fossil fuel collections. Total revenue to the ERRF, including the ERT revenue, was \$2,196,278.

Budget and Expenditure

The 2023 legislature appropriated \$1,776,107 for operating expenses to the Environmental Management Division (EMD) and Hazard Evaluation and Emergency

Response (HEER) Office. The state expended \$1,719,288 of the ERRF during FY24 for the four programs.

Environmental Response Tax Revenue Relatively Stable

The \$1.05 per barrel ERT revenue to DOH's environmental programs is relatively stable over the past five fiscal years. For fiscal years 2019, 2020, 2021, and 2022, and 2023 ERT revenue was: \$1,236,065, \$1,287,966, \$1,266,898, \$1,290,770, \$1,248,675, \$1,116,240, \$1,313,431, and \$1,306,010 respectively. Note that effective fiscal year 2016 the ERT revenue includes fossil fuel collections.

2015 Legislative Changes to HRS 128D and HRS 243 to Affect ERRF in FY2016

In July 2015, Governor Ige signed into law revisions to Section §128D-2 to limit the uses of the fund. In addition, revisions to §243-3.5(b)(1) modified the Environmental Response, Energy and Food Security Tax to add a 19-cent tax on each one million British thermal units (MMBtu) of fossil fuels and to allocate 4.8 per cent of said tax to the ERRF. The change in the means of finance for the 31 occupied positions from ERRF to general funds also took effect in July 2015. Accordingly, the Legislature adjusted the ERRF appropriations to the affected EHA programs. Another provision was that unexpended and unencumbered funds in excess of \$1,250,000 remaining in the fund after June 30 of each fiscal year will be transferred to the general fund. Changes affecting the ERRF have been reported in detail in this Report.

Hawaii State Response Program Impacted by Federal Budget Cuts

Because ERRF funding does not fully support the state's response obligation, the HEER Office implements the environmental site identification, assessment, and cleanup program using combined ERRF, General Fund, and federal cooperative agreement funding. The State Response Program Grant allocation for the last five years are as follows: \$849,600 FY2021 \$860,000 in FY2022, \$860,000 in FY2023, \$800,000 in FY2024, and \$400,000 in FY25. The allocations of the smaller Preliminary Assessment/Site Investigation (PA/SI) grant for the past five years were, \$223,000 in FY2021 \$275,000 in FY2022, \$275,000 in FY2023, \$245,000 in FY2024, and \$245,000 in FY2025. Grant allocations for FY2026 remain to be determined.

Given the relatively stable ERT revenue levels and substantial reductions in federal funding it is hoped that the additional funding from the 19-cent tax on each MMBtu of fossil fuels of which the ERRF is allocated 4.8 percent will help to offset the losses.

The Hawaii State Response Program (HSRP) Site Lists

This annual report presents four distinct Site Lists at the end of this document.

First, per HRS 128D, this annual report identifies Sites Eligible for Possible Remedial Action Under the Comprehensive Environmental Response Compensation and Liability Act (CERCLA).

Secondly, the *FY2024 Hawaii State Response Program (HSRP) Chemical Release Notification Log* lists 443 release notifications managed by the HEER Office State On-Scene Coordinators (SOSCs). HEER identified 273 cases directly related to petroleum releases.

Thirdly, the *Hawaii State Response Program List of Priority Sites* presents all non-military Hawaii sites identified for potential or known non-emergency response actions under HRS 128D. The list shows 1125 active sites under direct DOH oversight in the various State programs. This includes two (1 NFA and NFA w/ICs) sites with known or suspected contamination that were open or received No Further Action (NFA) determinations since the beginning of FY2024.

Finally, the *Hawaii State Response Program Defense and State Memorandum of Agreement (DSMOA) Program List of Priority Sites* presents a list of 587 military sites in Hawaii for which HEER's Site Discovery and Remediation (SDAR) section provides oversight. This includes two sites with known or suspected contamination that received NFA determinations.

SDAR provides regulatory oversight of hazardous substance response actions for Department of Defense (DOD) service branches under federal CERCLA authorities and HRS 128D. Sites include numerous high priority unexploded ordnance sites (UXO), and multiple diverse military operations, including tank farms, pipelines, industrial activities and active training sites. A DOD cooperative agreement funds investigation, cleanup and DOH oversight of most military sites under EPA CERCLA authority. Investigation and cleanup of petroleum-contaminated military sites are exempt under CERCLA and are conducted under HRS 128D authority. Cleanup and DOH oversight for petroleum related activities are also covered under the cooperative funding agreements.

Hawaii Department of Health Website

Additional information about DOH and its environmental programs is located at: <http://health.hawaii.gov/>. Specific information on the environmental programs may be located through the 'Environmental Health' and 'Emergency Preparedness and Response' drop down

menus on the front page, under Health and Safety Topics.

Information about HEER Office activities including recent events, new initiatives, public records, fact sheets and comprehensive guidance documents may also be directly accessed at: <https://health.hawaii.gov/heer/>

Blank Page

REPORT ON CHAPTER HRS 128D, HRS, ENVIRONMENTAL RESPONSE LAW (HERL) Environmental Response Revolving Fund (ERRF) Budget Report

The Chapter 128D, HRS, Environmental Response Law (HERL) annual report to the Thirty-Second Legislature, State of Hawaii, presents an accounting of Environmental Response Revolving Fund (ERRF) revenue and monies budgeted and expended for implementing environmental protection and response plans and actions.

ERRF Uses

In accordance with HRS 128D, the ERRF may be used for the following:

(1) Removal, remediation, and detection of oil and pollutant or contaminant releases;

(2) Removal and remediation of hazardous waste and any other solid, liquid, or gaseous substance that may harm the environment; and

(3) The payment of expenditures authorized by the Director under section 128D-4, Uses of the Fund.

Special Funding to Attorney General

The ERRF funds legal support from the state Department of Attorney General on a variety of regulatory oversight issues including issuing orders to noncompliant parties, negotiating agreements with Voluntary Response Program participants, providing legal guidance on program development and legislative proposals, and developing guidance for property owners on implementation of deed restrictions in accordance with Hawaii's Uniform Environmental Covenant Act.

Annual de minimis Settlements

Chapter 128D, HRS, Environmental Response Law, requires that the department report annually on any de minimis settlements. During FY2024, there were no de minimis settlements.

Four Environmental Health Program Budgets

Four DOH environmental programs share revenue deposited to the ERRF and have access to the following appropriation amounts: The Hazard Evaluation and Emergency Response (HEER) Office \$1,363,895 and the Environmental Management Division, which includes the

Clean Water Branch (CWB), Safe Drinking Water Branch (SDWB), and Solid and Hazardous Waste Branch (SHWB), \$412,212 for a total FY2024 allocation of \$1,776,107.

For FY2024 the legislature appropriated \$1,776,107 for operating expenses to the Environmental Management Division (EMD) and the HEER Office.

For FY2024 the state expended \$1,719,288 to the four programs. The operational expenses were for emergency and non-emergency environmental response contractors, salary and fringe benefits, travel, response training, standby and overtime pay, legal services, and Tier II Fees distributed to the county LEPCs.

Environmental Response Revolving Fund Revenue – FY2024

HTH 849 and HTH 840

ENVIRONMENTAL RESPONSE TAX	1,306,010
INVESTMENT POOL ACCOUNT	339,367
FEES, FILING OF CHEMICAL INVENTORY FORMS	161,876
FEES, VOLUNTARY RESPONSE ACTIONS	9,810
COST RECOVERY	99,244
REFUND/REIMBURSEMENT OF PRIOR PERIOD EXPENDITURES	12,946
VIOLATIONS OF AIR POLLUTION CONTROL REGULATIONS	107,200
VIOLATION OF WATER POLLUTION REGULATIONS	140,200
VIOLATION OF SOLID WASTE REGULATIONS	375
COMMUNITY NOISE CONTROL	19,250
TOTAL	<u>2,196,278</u>

Environmental Response Revolving Fund Expenditure – FY2024

HTH 849 and HTH 840

PERSONNEL	335,630
OPERATIONS	1,284,214
EQUIPMENT	99,444
TOTAL	<u>1,719,288</u>

Blank Page

REPORT ON CHAPTER 128E, HRS, HAWAII EMERGENCY PLANNING AND COMMUNITY RIGHT-TO-KNOW ACT (HEPCRA)

Environmental Response Revolving Fund (ERRF) HEP CRA Budget Report

In compliance with Chapter 128E, HRS, Hawaii Emergency Planning and Community Right-to-Know Act (HEPCRA), this annual report to the Thirty-Second Legislature, State of Hawaii, 2023 presents the accounting of Tier II fee amounts as follows:

- Amount collected during Fiscal Year 2024
- Amounts distributed during Fiscal Year 2024
- Projected collection for Fiscal Year 2025

HEPCRA Facility Reporting and Fees

HEPCRA facilities are those that store, use, or manufacture above defined thresholds, any hazardous substance, or extremely hazardous substance. An owner or operator of a HEP CRA facility must file notification of such “Tier II” activity and pay a \$200 filing fee annually. HEER Office staff assesses each submitted Tier II report,

records the HEP CRA facility data into the EPA Tier II Submit database and processes the fees for deposit to the Environmental Response Revolving Fund (ERRF).

DOH distributed the deposited Tier II filing fees to the Hawaii State Emergency Response Commission (HSERC) and the Local Emergency Planning Committees (LEPCs) for operating expenditures. The annual amounts distributed to the LEPCs are based on Tier II fees collected from two fiscal years prior and after HSERC operating expenditures have been deducted.

As of June 30, 2024, there are 886 qualifying Tier II facilities. Military facilities must submit Tier II information but are exempt from filing fees.

The HSERC, LEPCs, and HEER Office are continuing efforts to identify and contact possible non-reporting facilities through community outreach and facility inspections.

Blank Page

THE HAZARD EVALUATION AND EMERGENCY RESPONSE OFFICE HAWAII STATE RESPONSE PROGRAM MANAGEMENT AND IMPLEMENTATION

The HEER Office Mission

The mission of the HEER Office and the Hawaii State Response Program (HSRP) is to address all aspects of releases of hazardous substances and pollutants, including oil, into the environment. HEER Office work includes preventing, planning for, and responding to hazardous substance releases, or risks of releases. HEER accomplishes this mission by responding rapidly to new spills and addressing existing contaminated sites with the highest risk to human health and the environment first, preventing contamination rather than cleaning up after the fact, and basing decisions on sound scientific principles and common sense.

The Hawaii State Response Program

ERRF funding to the Hazard Evaluation and Emergency Response (HEER) Office is used for operational costs for the office's implementing program, the HSRP. Three operating sections address important focus areas of the HSRP. They are the 1) Emergency Preparedness and Response (EP&R) Section, 2) Hazard Evaluation (HE) Section, and the 3) Site Discovery, Assessment and Remediation (SDAR) Section.

The HSRP provides for oversight of assessment and cleanup activities during chemical emergencies, and on high and medium priority contaminated sites across the Hawaiian Islands. These include privately owned, municipal, and state-owned properties, and federal military sites. DOH has generally curtailed oversight of low priority sites, which pose little hazard, due to state budget constraints.

HEER staff works with property owners, the environmental community, developers, the public, and other state and federal agencies to implement solutions for eliminating risk of chemical exposure to humans and the environment. HSRP examples of work performed are as follows:

- Emergency response to releases of hazardous substances that pose an imminent danger to people or the environment.
- Non-emergency response actions on properties presumed or known to pose a risk to human health and/or the environment because of contamination with hazardous substances.

- Identification and inspection of sites storing and using hazardous chemicals on property.
- Performing ecological and human health risk assessment in the areas of toxicological assessments of chemical threats to human health.
- Establishing appropriate cleanup levels for chemical contamination.
- Assisting the public and responsible parties with access to information such as:
 - Health effects of chemicals
 - Public Record documents
 - Technical guidance and reference materials for cleaning up contaminated sites
- Ongoing development and management of site related electronic records.
- Environmental policy, law, and rule development.

Essential Federal Funding Support to the HSRP

As a result of legislative changes made in 2015, the ERRF no longer funds core operations for the HEER Office, and the General Fund currently supports approximately 40% of the HEER Office state response program obligations. Consequently, the HEER Office relies heavily on three cooperative agreement sources of federal funding to implement the office's mission and the HSRP.

The federal funding sources are the EPA State Response Program (SRP), the EPA Preliminary Assessment/Site Inspection (PA/SI) Cooperative Agreements, and the Department of Defense and State Memorandum of Agreement (DSMOA) Cooperative Agreement.

The Environmental Protection Agency (EPA) State Response Program (SRP) Cooperative Agreement

The HEER Office continues to receive funding from the EPA State Response Program (SRP) grant under Section 128(a) of the Small Business Liability Relief and Brownfields Revitalization Act (SBLRBRA) of 2002. This SRP grant provides crucial funds for staff salaries, capacity building, and program development activities. The SRP grant awards have been steadily declining from 2011. The SRP grant allocation for the past five years are as follows: \$929,600 in FY2020, \$849,600 FY2021, \$860,000 in FY2022, \$860,000 FY2023, and \$800,000 in FY2024.

EPA Preliminary Assessment/Site Inspection (PA/SI) Cooperative Agreement

The EPA Preliminary Assessment/Site Inspection Grant funds site discovery efforts combined with federal CERCLA (Superfund) evaluation of sites. HEER staff evaluates and rates sites based on PA/SI system criteria to determine their eligibility for the National Priority List. When a rated site scores too low to be eligible for the National Priority List of Sites, EPA transfers site-oversight responsibility from the EPA to the State of Hawaii. This year, the HEER Office used the \$245,000 PA/SI grant to fund positions, conduct field-screening activities, and fund laboratory costs to complete rapid site screenings that assess residential areas that may have been affected by historic releases of pesticides and other contaminants.

Department of Defense/State Memorandum of Agreement (DSMOA) Cooperative Agreement:

The HEER Office participates in two federal cleanup programs. The office provides oversight services to the military on sites located on federal property and managed and funded under the Department of Defense/State Memorandum of Agreement (DSMOA) Program. HEER Office also manages assessment and cleanup activities for sites delegated to the DSMOA funded Formerly Used Defense Sites (FUDS).

The federal government established the DSMOA program to cover reimbursement of costs incurred by the state in providing oversight services to the Department of Defense (DOD) installations conducting environmental cleanup activities funded under the Defense Environmental Restoration Program (DERP). DSMOA funds are given to the state based on the state's request for advanced or reimbursement payment. The DSMOA Cooperative Agreement funds all staff positions overseeing remedial investigations and cleanups under these two DOD programs.

For FY2024, the state's reimbursement under DSMOA was \$129,392.

Modern Data Management and Hazard Tracking Tools

Residual contamination exists at hundreds of sites in Hawaii. Identifying these sites to ensure that unhealthy exposures are not occurring is a shared responsibility of the HEER Office and the affected property owners. The HEER Office has converted many of its public records to electronic format to make them easily available to the public in accordance with Hawaii's Sunshine Law.

A HEER/UH Contract for Analytical Laboratory Service

Since 1998, the HEER Office has contracted with the University of Hawaii (UH) to characterize unknown hazardous substances. The successful collaboration allows for quick identification of chemical pollutant unknowns while conducting an emergency response action. The HEER Office is currently in year one a five-year contract with UH, effective May 1, 2024 until April 30, 2029. In addition to analyzing unknown substances, the university laboratory staff assists in training and outreach to Fire HazMat teams throughout the State.

Cost Recovery

Chapter 128D, HRS, provides legal authority to cost recover all ERRF expenses for DOH response actions. For FY 2024, the HEER Office and the Solid and Hazardous Waste Branch recovered \$99,244. The HEER Office mechanisms for cost recovery require charging billable staff time and expenses to the ERRF and include following:

Responsible Party Agreement: DOH recovers oversight expenses for the Honolulu Authority for Rapid Transportation, Honolulu Harbor, Hickam Community Housing, and GASCO cleanup sites in accordance with the terms of their respective Agreements for Remedial Action.

Fast Track Agreement: Parties wishing to receive expedited oversight of investigation and cleanup of low and medium priority sites have the option to enter into Fast Track Agreements, in which they pay oversight costs in return for face-to-face meetings and expedited document reviews.

Voluntary Response Program Agreement: DOH recovers oversight expenses for VRP and other cleanup sites in accordance with the terms of their respective HRS 128D Part II Voluntary Response Program Agreements for Remedial Action.

Emergency Response Action Expenditures: Money spent for responding to a chemical emergency is cost recoverable, only when expended from the ERRF. State On-Scene Coordinator's (SOSCs) personnel costs are paid from the General Fund and are not cost recoverable. Moneys expended from the ERRF for private emergency responder contractor services are cost recoverable.

Penalties: Penalties are assessable to a Responsible Party for failure to report a release of a hazardous substance, pollutant, or contaminant, or for failure to comply with a departmental or judicial cleanup order.

REPORT ON CHAPTER 128E, HRS, HAWAII EMERGENCY PLANNING AND COMMUNITY RIGHT-TO-KNOW ACT (HEPCRA)

Environmental Response Revolving Fund (ERRF) HEP CRA Budget Report

In compliance with Chapter 128E, HRS, Hawaii Emergency Planning and Community Right-to-Know Act (HEPCRA), this annual report to the Thirty-Third Legislature, State of Hawaii, 2025 presents the accounting of Tier II fee amounts as follows:

- Amount collected during Fiscal Year 2024
- Amounts distributed during Fiscal Year 2024
- Projected collection for Fiscal Year 2025

HEPCRA Facility Reporting and Fees

HEPCRA facilities are those that store, use, or manufacture above defined thresholds, any hazardous substance, or extremely hazardous substance. An owner or operator of a HEP CRA facility must file notification of such “Tier II” activity and pay a \$200 filing fee annually. HEER Office staff assesses each submitted Tier II report,

records the HEP CRA facility data into the EPA Tier II Submit database and processes the fees for deposit to the Environmental Response Revolving Fund (ERRF).

DOH distributed the deposited Tier II filing fees to the Hawaii State Emergency Response Commission (HSERC) and the Local Emergency Planning Committees (LEPCs) for operating expenditures. The annual amounts distributed to the LEPCs are based on Tier II fees collected from two fiscal years prior and after HSERC operating expenditures have been deducted.

As of June 30, 2024, there are 886 qualifying Tier II facilities. Military facilities must submit Tier II information but are exempt from filing fees.

The HSERC, LEPCs, and HEER Office are continuing efforts to identify and contact possible non-reporting facilities through community outreach and facility inspections.

Tier II Filing Fees Collected and Distributed – FY2024

FY 2024 Amount Collected	\$161,875.80
FY 2024 Amount Distributed (FY 2022 Collected Fees)	\$190,330.39
FY 2025 Projection of Fees to be Collected	\$162,000

County	Funds Distributed to LEPCs	Number of Qualifying Facilities		Total Facilities
		Non-Military Facilities	Military Facilities	
Honolulu	74,013.33	383	28	411
Hawaii	44,408.00	227	4	231
Maui	29,605.33	149	4	153
Kauai	16,447.41	87	4	91
Total	164,474.07	846	40	886

HEER Office Emergency Preparedness and Response Key Actions

The Emergency Preparedness and Response (EP&R) Section of the HEER Office is the State's lead on environmental emergencies, responding to releases or threats of releases of hazardous substances which include oil and/or chemicals on land or in water. The EP&R Section includes highly trained State On-Scene Coordinators (SOSCs) who provide 24/7 response capabilities and are authorized to take emergency actions to protect public health and the environment.

Deemed essential workers, the SOSCs continue to prepare for and respond to releases and recognize that responder safety is of utmost priority. The SOSCs knew that protecting themselves have a direct impact on how well they can respond to protect public and the environment. As the COVID-19 pandemic continued, the SOSCs were very cognizant how different variants of the coronavirus are evolving. Therefore, SOSCs were very diligent in donning personal protective equipment, maintaining physical distancing, and abiding by Centers for Disease Control and Prevention guidelines.

In FY2024 HEER's SOSCs managed 443 release notifications and performed direct oversight on 384 of those cases. **Emergency Response Action Expenditures:** Money spent for responding to a chemical emergency is cost recoverable, only when expended from the ERRF. State On-Scene Coordinator's (SOSCs) personnel costs are paid from the General Fund and are not cost recoverable. Moneys expended from the ERRF for private emergency responder contractor services are cost recoverable.

Notable cases of FY2024 include the following:

Case No. 20230802-1512

Picric Acid Discovered in Storage Cabinet

On July 28, 2023, a bottle of picric acid was found at the University of Hawaii, Manoa (UH), when one of their labs was in the process of being decommissioned. The picric acid looked to have been crystalized in the bottle, which could be an explosive hazard. The HEER Office worked with UH and the Honolulu Police Department to find a safe way to dispose of the picric acid and minimize the risk to the UH staff and the general public. While a number of solutions were discussed, the safest option was to remove the acid from the site and have it detonated at an explosive range.

Case Nos. 20230909-2012 and 20240110-0733

R/V HA5834K Battleship or Chaparral Aground

Recreational Vessel Chaparral was an 85-foot, 66-ton decommissioned U.S. Navy torpedo retriever. First aground on the south side of the island of Maui on September 9, 2023, it reportedly contained 1500 gallons of diesel. The owner managed to free the vessel but again ran aground on January 10, 2024, with up to 400 gallons of diesel, 150 gallons of hydraulic oil, batteries, and fire extinguishers potentially being released into the environment. The U.S. Coast Guard used the Oil Spill Liability Trust Fund to remove the hazardous substances. With the owner reportedly unable to pay for the salvage, in March 2024, the State Department of Land and Natural Resources hired contractors to salvage and recycle the metal.

Photo credit: The Maui News

Case No. 20231004-0530

Roofing Foam Fire at Base Yard

On October 4, 2023, a fire started at Beacon Roofing Supply in the early morning. The source of the fire was old expanding roofing foam chemicals components after an incomplete chemical reaction. The fire was extinguished by the Honolulu Fire Department, while the HEER Office worked with the company to make sure the chemicals involved in the reaction were store separately and disposed of safely.

Case No: 20231120-1435

Navy Boeing P-8 Poseidon Jet Down at Kaneohe Bay

On November 20, 2023, a Navy P-8A Poseidon plane overshot a runway at Marine Corps Base Hawaii and landed in shallow water approximately 5 to 25 feet depth offshore at Kaneohe Bay, an ecologically sensitive bay. Nine people were onboard, but no one got hurt. The plane is a reconnaissance and surveillance aircraft on approach to land the runway at Marine Corps Air Station on the eastern side of the island of Oahu. The plane safely defueled of approximately 2000 gallons without releasing any fuel into the environment. U.S. Navy salvage experts successfully recovered the plane by using inflatable salvage roller bags under the plane and then raised the aircraft and slowly moved the aircraft to shore. The plane was reportedly structurally sound. Parts of the plane rested on coral and the Hawaii Department of Land and Natural Resources conducted natural resource damage assessment once the plane was successfully removed out of the water.

Photo Credit: The Associated Press

Case No. 20231204-1345

Downed Aircraft in Campbell Industrial Park

On December 4, 2023, a single-engine plane carrying two passengers made a crash landing in Campbell Industrial Park. The plane, which was experiencing engine issues, came down in a vacant construction lot where it released 3-5 gallons of aviation fuel. No critical injuries were reported, though HEER continued to work with the company owner to ensure that the plane was defueled before removal, and that the impacted soil was remediated.

Photo Credit: Honolulu Fire Department, HazMat 2

Case No. 20240226-1103

Abandoned Drums and Totes at a Former Salvage Yard

Department of Health (DOH) workers were completing an inspection of a former salvage yard when they discovered over (40) 55-gallon drums and numerous totes containing unknown contents that were abandoned in place after the property was sold to a local private school. The DOH inspectors notified HEER of the potential release to expedite disposal and cleanup of the site. HEER then issued a Notice of Interest to the property owner to remove the waste and remediate all impacted areas in accordance with DOH Solid and Hazardous Waste Branch (SHWB) rules and the HEER Technical Guidance Manual.

Photo Credit: Department of Health, Solid and Hazardous Waste Branch

Case No. 20240528-1211

Hickam Low Sulfur Diesel Spill from Tank

On May 28, 2024, operators were conducting a fuel transfer at a Hickam Air Force Base tank farm when fuel began spilling from the top of one of their above-ground storage tanks, releasing an estimated 500-1000 gallons of low-sulfur diesel onto the surrounding concrete pad. The HEER Office responded to the scene to assess the extent of impact to the environment and determined that there was no threat to any surface waters or groundwater and continued to work with Naval Supply Systems Command (NAVSUP) on the cleanup of the impacted drainage sump, concrete pad, and the surrounding gravel.

Case No 20240609-0615

Water Main Break at Nimitz Highway and Alakawa Street

On June 9, 2024, a water main break occurred at the intersection of Nimitz Highway and Alakawa Street. Due to the past history of the contamination in the area, an oily sheen was released with the water that made its way into the nearby storm drains and into Honolulu Harbor. A boom was placed in front of storm water inlets to prevent further spread of the sheen. As work on the main was being conducted, vac trucks were used to take up the contaminated water to prevent it from being released into the environment. The water was stored in containers until it could be properly disposed of.

The Emergency Preparedness and Response (EP&R) Section of the HEER Office is the State's lead on environmental emergencies, responding to releases or threats of releases of hazardous substances which include oil and/or chemicals on land or in water. The EP&R Section includes highly trained State On- Scene Coordinators (SOSCs) who provide 24/7 response capabilities and are authorized to take emergency actions needed to protect public health and the environment.

Case No. 20230802-1512

Picric Acid Discovered in Storage Cabinet

On July 28, 2023, a bottle of picric acid was found at the University of Hawaii, Manoa (UH), when one of their labs was in the process of being decommissioned. The picric acid looked to have been crystalized in the bottle, which could be an explosive hazard. The HEER Office worked with UH and the Honolulu Police Department to find a safe way to dispose of the picric acid and minimize the risk to the UH staff and the general public. While a number of solutions were discussed, the safest option was to remove the acid from the site and have it detonated at an explosive range.

Case Nos. 20230909-2012 and 20240110-0733

R/V HA5834K Battleship or Chaparral Aground

Recreational Vessel Chaparral was an 85-foot, 66-ton decommissioned U.S. Navy torpedo retriever. First aground on the south side of the island of Maui on September 9, 2023, it reportedly contained 1500 gallons of diesel. The owner managed to free the vessel but again ran aground on January 10, 2024, with up to 400 gallons of diesel, 150 gallons of hydraulic oil, batteries, and fire extinguishers potentially being released into the environment. The U.S. Coast Guard used the Oil Spill Liability Trust Fund to remove the hazardous substances.

With the owner reportedly unable to pay for the salvage, in March 2024, the State Department of Land and Natural Resources hired contractors to salvage and recycle the metal.

Case No. 20231004-0530

Roofing Foam Fire at Base Yard

On October 4, 2023, a fire started at Beacon Roofing Supply in the early morning. The source of the fire was old expanding roofing foam chemicals components after an incomplete chemical reaction. The fire was extinguished by the Honolulu Fire Department, while the HEER Office worked with the company to make sure the chemicals involved in the reaction were store separately and disposed of safely.

Case No: 20231120-1435

Navy Boeing P-8 Poseidon Jet Down at Kaneohe Bay

On November 20, 2023, a Navy P-8A Poseidon plane overshot a runway at Marine Corps Base Hawaii and landed in shallow water approximately 5 to 25 feet depth offshore at Kaneohe Bay, an ecologically sensitive bay. Nine people were onboard, but no one got hurt. The plane is a reconnaissance and surveillance aircraft on approach to land the runway at Marine Corps Air Station on the eastern side of the island of Oahu. The plane safely defueled of approximately 2000 gallons without releasing any fuel into the environment. U.S. Navy salvage experts successfully recovered the plane by using inflatable salvage roller bags under the plane and then raised the aircraft and slowly moved the aircraft to shore. The plane was reportedly structurally sound. Parts of the plane rested on coral and the Hawaii Department of Land and Natural Resources conducted natural resource damage assessment once the plane was successfully removed out of the water.

Case No. 20231204-1345

Downed Aircraft in Campbell Industrial Park

On December 4, 2023, a single-engine plane carrying two passengers made a crash landing in Campbell Industrial Park. The plane, which was experiencing engine issues, came down in a vacant construction lot where it released 3-5 gallons of aviation fuel. No critical injuries were reported, though HEER continued to work with the company owner to ensure that the plane was defueled before removal, and that the impacted soil was remediated.

Case No. 20240226-1103

Abandoned Drums and Totes at a Former Salvage Yard

Department of Health (DOH) workers were completing an inspection of a former salvage yard when they discovered over (40) 55-gallon drums and numerous totes containing unknown contents that were abandoned in place after the property was sold to a local private school. The DOH inspectors notified HEER of the potential release to expedite disposal and cleanup of the site. HEER then issued a Notice of Interest to the property owner to remove the waste and remediate all impacted areas in accordance with DOH Solid and Hazardous Waste Branch (SHWB) rules and the HEER Technical Guidance Manual.

Case No. 20240528-1211

Hickam Low Sulfur Diesel Spill from Tank

On May 28, 2024, operators were conducting a fuel transfer at a Hickam Air Force Base tank farm when fuel began spilling from the top of one of their above-ground storage tanks, releasing an estimated 500-1000 gallons of low-sulfur diesel onto the surrounding concrete pad. The HEER Office responded to the scene to assess the extent of impact to the environment and determined that there was no threat to any surface waters or groundwater and continued to work with Naval Supply Systems Command (NAVSUP) on the cleanup of the impacted drainage sump, concrete pad, and the surrounding gravel.

Case No 20240609-0615

Water Main Break at Nimitz Highway and Alakawa Street

On June 9, 2024, a water main break occurred at the intersection of Nimitz Highway and Alakawa Street. Due to the past history of the contamination in the area, an oily sheen was released with the water that made its way into the nearby storm drains and into Honolulu Harbor. A boom was placed in front of storm water inlets to prevent further spread of the sheen. As work on the main was being conducted, vac trucks were used to take up the contaminated water to prevent it from being released into the environment. The water was stored in containers until it could be properly disposed of.

Hazard Evaluation Actions and Studies

Health Impacts of the November 2021 Petroleum Contamination of the Joint Base Pearl Harbor Hickam Water System

Working to Understand the Human Health Impacts of JP-5 Jet Fuel Contamination on People Served by the Joint Base Pearl Harbor Hickam Water System

The November 2021 release of jet fuel from the Red Hill Bulk Fuel Storage Facility and the subsequent contamination of the drinking water system was a massive environmental catastrophe that sickened thousands of people. The event was unprecedented, with no historical or experimental models available that predict health effects from drinking water contaminated with JP-5 jet fuel. Given the lack of available information, it became necessary to further investigate possible health impacts, as well as provide health information and guidance to the public, health care providers, and the community. HEER staff worked extensively on this aspect of the emergency response to this contamination event spearheading efforts that included:

- Partnering with CDC's Agency for Toxic Substance and Disease Registry (ATSDR) to perform 2 Assessment of Chemical Exposure (ACE) Health Impact Surveys to evaluate the experiences of people exposed to the contaminated water.
 - The first ACE survey was conducted in January and February 2022 and had 2289 participants. 87% of participants reported health symptoms from the incident with 80% of those having improvement when they switched to an alternative water source. The survey demonstrated people were having significant health symptoms as well as significant life disruptions from the event and mistrust of responding agencies. A summary of the initial ACE survey results can be found [here](#).
 - The Follow-up Ace survey was conducted in September 2022 and was designed to evaluate ongoing health symptoms and people's attitudes towards their drinking water. The follow-up survey had 986 participants. Of the respondents, 80% reported on going health symptoms with 65% of those expressing high or very high confidence that their symptoms were related to the contaminated water incident. Participants also expressed significant mental health impacts from the event and concern and frustration with communication, transparency and trust. Further data analysis is ongoing, but a summary of preliminary results from the follow-up ACE survey can be found [here](#).
- Creation and dissemination of outreach materials to assist affected persons and health care providers in understanding the potential health impacts from exposure to JP-5 jet fuel in drinking water. HEER staff developed guidance for medical providers as well as public fact sheets on these topics. Information was shared via traditional media, DOH's medical advisory program, social media and by posting on DOH's website. Examples of these materials can be found on the [DOH Red Hill website](#) by clicking on the "Show Resources" button at the bottom.
- Extensive research and risk assessment work to develop an Environmental Action Level (EAL) for the release of fresh JP-5 jet fuel in drinking water. This effort, led by HEER staff, required complex risk assessment work and calculations to account for the specific chemical properties of JP-5 and the freshness of the fuel. Risk Assessments of this type generally take months to years to complete but was accomplished by the HEER Office in a few weeks due to the emergency nature of the problem. A technical memo describing the process can be found [here](#).
- Obtainment of fuel samples from the Red Hill facility by HEER Office staff and detailed research on the chemistry and toxicity of components in the jet fuel that was drawn into the JBPHH drinking water system. Laboratory experiments were carried out by one of the top petroleum forensics chemists in the country. The report can be accessed on the [HEER Office EAL-EHE webpage](#).
- Preparation of an Exposure Assessment Report by HEER Office staff that summarizes the migration of fuel through the JBPHH drinking water system and uses the above research to identify the specific types and concentrations of chemicals and duration of apparent exposure of JBPHH residents and residents on

connected water systems. Doctors used information in the report to assist in medical diagnoses and treatment of affected residents. The report can be accessed on the [HEER Office EAL-EHE webpage](#).

- Continued efforts to urge the Department of Defense, the Defense Health Agency and the US Navy to apply their extensive resources to further caring for people affected by the water contamination. With its partners at CDC/ATSDR, HEER has been instrumental in convincing the Department of Defense and Defense Health Agency to establish a Red Hill Water Clinic to centralize evaluation and treatment of on-going health concerns. In addition, HEER and CDC/ATSDR staff continue to urge DOD and DHA to establish a third-party health registry that would follow exposed persons for years to evaluate health impacts.

Evaluating Infrastructure and Health Risks of Lead in Drinking Water at Hawaii Schools and Child Care Facilities

Hawaii Water Infrastructure Improvements for the Nation (WIIN) Section 2107 Drinking Water Project

WIIN 2107 is a federal grant for testing drinking water for lead contamination at schools and childcare centers. Working in close collaboration with DOH's Safe Drinking Water Branch (SDWB), State Laboratories Division (SLD), and Children with Special Health Needs Branch (CSHNB), plus the Hawaii Department of Education (DOE), and the Hawaii Department of Human Services (DHS), HEER completed Stage 1 of this extensive project in 2021, testing for lead in drinking water from 6,210 taps at 106 elementary schools and 117 child care facilities.

Stage 2 of the WIIN project, which included testing 4,459 samples at the remaining 72 DOE elementary schools completed in October 2022. Overall project results found elevated levels of lead in the drinking water at 3.7% of the elementary school taps and 1.6% of the child care taps. In total, 133 elementary schools and 4 child care facilities had at least one tap above the project action level for lead of 15 parts per billion (ppb). HEER created and helped distribute educational and communication materials for the staff, students, and families at the schools and childcare centers as well as a public website (<https://health.hawaii.gov/WIIN>) that displayed results in near real time and provides information on the project and resources for reducing lead exposure from drinking water. HEER continues to work with DOE and DHS to prevent exposure from lead in the drinking water at their facilities and develop long-term solutions to these infrastructure problems in an effort to maintain a safe and healthy environmental for kids to learn and grow. In October 2022, HEER staff, in partnership with DOH's SDWB and Hawaii DOE were awarded a \$2 million competitive grant from EPA to replace problematic drinking water fixtures at schools. This grant award will close the circle of this important project that investigated and identified lead hazards in drinking water at schools and will now repair the infrastructure to fix this problem.

Work on the fixture replacement and verification testing commenced in early 2023. So far, all 1459 fixtures that were identified as lead hazards have been replaced. All the replaced fixtures have undergone verification testing and 1159 have been released for unrestricted use. In June 2023, HEER staff, in partnership with DOE began working with informatics and software development firm Axiom Data Science to create a fixture replacement website where the public can track the progress and status of replacements. The fixture replacement website development is live and linked from HEER's already existing WIIN website.

There are 151 middle schools and 66 high schools in the state of Hawaii with total count of 75,998 students. As children make the natural progression through grade school there is a risk of cumulative exposure in middle school and high school. Additionally, since a large portion of k-facilities (K-6) tested (42%) in the previous study indicated high levels of lead in their drinking water supply (42%), we are proposing a follow up study with the same screening methods to identify middle school and high schools (7-12) water sources that exceed the new EPA lead trigger levels of 10 part per billion (ppb). Upon identification, corrective measures will be implemented to replace potential sources of lead contamination in drinking water sources.

With funding appropriated under section 1464(d) of the Safe Drinking Water Act, amended by the Water Infrastructure Improvement Act (WIIN) section 2107, the HDOH, in conjunction with the HDOE and the HDHS, plans to initiate a program to evaluate for lead contamination in drinking water at middle schools and high schools. The project methods will be guided by the Environmental Protection Agency's (EPA's) 3Ts for Reducing Lead in Drinking Water (3Ts). Details of the 3Ts can be found at www.epa.gov/ground-water-and-drinking-water/3ts-reducing-lead-drinkingwater-toolkit.

HDOE facilities will be prioritized for testing based on high-risk criteria outlined in the 3Ts including schools with greater than 50% of students receiving free or reduced cost school lunch, and older facilities that are more likely to contain lead plumbing.

The EPA's 3Ts will be used as guidance to direct: (1) Communication to the public, parents, teachers, school staff, and the community about the testing program, results, information about lead, and any potential health risks; (2) Training about the risks of lead in drinking water and testing for lead; (3) Testing using appropriate sampling protocols and a certified laboratory; and (4) Taking Action including developing an action plan to rapidly respond to elevated results and prioritizing replacement of problematic plumbing and fixtures.

Ecological and Human Health Risk Key Studies

The HEER Office Hazard Evaluation (HE) Section provides ecological and human health risk assessment, conducts toxicological assessments of chemical threats to human health, establishes appropriate cleanup levels for chemical contamination, and assists the public with information concerning the health effects of chemicals.

Evaluating Perfluoroalkyl Substance (PFAS) Contamination in Hawaii and Potential Risks to Human Health and the Environment

PFASs are a large class of chemicals used in many materials for their waterproofing qualities. Traditional sources of PFAS include aqueous firefighting foam (AFFF) used frequently at airports and military bases, waterproof and stain resistant consumer goods, food packaging, and a variety of industrial processes. Because of their many uses and their persistence in the environment, PFASs are known to accumulate in treated wastewater, biosolids from wastewater treatment and at landfills. Currently, little is known about the burden of PFAS contamination in Hawaii. In FY2022, HEER worked on multiple projects to help further assess the burden of PFAS contamination in Hawaii and its potential risks to Human Health the environment. Information about PFASs and on-going HEER projects can be found on the HEER website: <https://health.hawaii.gov/heer/environmental-health/highlightedprojects/pfas/>.

Current projects include:

- Evaluating PFAS contamination in treated wastewater and biosolids, landfill leachate, and soils where treated wastewater is reused. This project was funded by the EPA in FY2020 and is designed to better understand the degrees of PFAS contamination in treated wastewater that is reused or discharged to the ocean as well as in biosolids and landfill leachate. Samples for this project have been collected from Hazard Evaluation Actions and Studies ENVIRONMENTAL RESPONSE AND PLANNING COMMUNITY KNOWLEDGE REPORT TO THE THIRTY-THIRD LEGISLATURE, STATE OF HAWAII 2025 Section 3, Page 4 wastewater treatment plants and landfills from Kauai, Maui and Hawaii Counties with plans for the collection of samples from Honolulu County wastewater treatment plants and landfills as well as from Army and Navy locations on Oahu. Results from this project will help HEER better understand how these chemicals are moving through the environment and evaluate potential human exposures to PFASs and begin to develop ways to limit these chemicals in the environment. A technical report summarizing the results of the study was posted to the HEER Office EHE-EAL webpage (). A recorded presentation on the results of the study is posted to the HEER Office Webinar webpage ().

- HEER staff led by Dr. Roger Brewer, utilized the latest scientific information to develop Environmental Action Levels (EALs) for 24 PFASs in soil and groundwater. The EALs have undergone extensive public review and final interim EALS were published in December 2020 with the latest update in November 2024. Dr Brewer was invited to give presentations on the Hawaii guidance at several national and international conferences. These EALs are the most comprehensive set of risk-based, soil and groundwater action levels for PFASs in the US and continue to be reevaluated by HEER staff.
- HEER staff finalized funding for a field project to evaluate to the potential uptake of PFASs in food crops from compost prepared with PFAS-containing compostable food ware. The project will also investigate the potential uptake of PFASs into food crops from agricultural fields irrigated with municipal wastewater. The project is scheduled to start in early 2025 and be completed by the end of that year.

Evaluating the Risks of Climate Change on Sites with Chemical Contamination

The HEER Office continues its work evaluating the risks of climate change on sites with known chemical contamination in Hawaii. Hawaii has around 1,000 sites with known chemical contamination that are monitored and regulated by the Department of Health's Hazard Evaluation and Emergency Response (HEER) Office. Many of the contaminated sites are in low lying areas and along shorelines and are at risk for coastal erosion, as well as submersion and impacts from flooding, groundwater inundation and sea level rise.

While hazards from contamination may be mitigated by removal, treatment or destruction of contaminated media, the most commonly used remedial option across the islands is to prevent exposure by managing contaminated materials in place. This is often done through a combination of physical containment, including protective caps or treatment, and institutional controls such as guidance or restrictions against reuse of sites for residential housing, playgrounds and schools. However, the use of these strategies has historically been viewed in the context of a static environment. The increasing impacts from climate change and sea level rise including more frequent flooding, accelerated erosion and related disruption of contaminated lands due to sea level rise, ground water inundation and an increase in storms and heavy rain events require an equal progression in the manner in which risk is evaluated and mitigated for these types of sites. Of particular concern are large, current or former industrial sites in coastal areas that are known to be heavily contaminated and are at high risk of climate change-related impacts. This includes many harbors, airports, bulk fuel terminals, and former landfills in the islands.

Specific concerns related to these contaminated areas result from the chemical changes induced by sea level rise, effects of barometric pressure changes and increased precipitation (e.g., storms), groundwater inundation and increased flooding. Risks to human health and the environment can increase significantly when these contaminants are moved from their current location to areas that did not previously contain contamination. This includes the possible release of contaminants into drinking water sources and the food chain via fish and shellfish. The HEER office published a memo outlining these hazards and specific risks in Hawaii in June 2021. The memo can be viewed on <https://health.hawaii.gov/heer/climate-and-health/>. Public comments on the memo are also posted to the website. HEER plans to expand work in this area by defining guidance for environmental clean-ups in climate change impacted areas and continuing research and modeling into the potential hazards.

Assessing the Chemistry and Toxicity of Groundwater Contaminated with Petroleum Fuels

The HEER Office completed a study of the chemistry and toxicity of drinking water contaminated with petroleum fuels. The results of the study were used to update HDOH action levels. The updates allowed for a more in-depth assessment of the health risk posed by petroleum-contaminated groundwater in Hawai'i, including impacts to groundwater beneath the Navy's Red Hill Tank Farm complex. The study, the most detailed of its kind carried out in the US, was overseen by Dr. Roger Brewer and funded through grants to the HEER Office from the USEPA. A summary of the study results is included in the HEER Office EAL guidance and available for review on the [HEER Office EAL-EHE webpage](#).

Health Advisories for Kilauea Eruptions and Evaluating Public Health Effects from the 2018 Kilauea East Rift Zone Eruption

HEER continues to provide technical support and public outreach regarding volcanic emissions and resulting air quality hazards. HEER staff actively participates in the Inter-Agency Vog Network and collaborates with other Branches within DOH to issue health advisories on protecting oneself from hazards related to volcanic gases and vog.

The HEER Office and the Emergency Medical Services and Injury Preventions Systems Branch (EMSIPSB) have partnered with the University of Hawaii, Manoa Department of Atmospheric Sciences on a project to develop a real-time public messaging service about vog based on forecasts from the established Vog Measurement and Prediction Project (VMAP). The new public messaging service called the Vog and Laze Exposure (VALE) Critical Warning System, is designed to provide real-time alerts to residents in areas where poor air quality from volcanic emissions is predicted within a short time frame. This warning system will allow residents to make health protective choices during periods of rapidly changing conditions. The VMAP vog model has recently undergone a significant upgrade with a public facing webpage (<http://mkwc.ifa.hawaii.edu/vmap/new/>) to disseminate information.

Health Surveillance for Environmental Factors

In FY2024, staff provided risk assessment support and responded to a diversity of inquiries concerning potential health hazards. These inquiries included questions regarding heavy metals (mercury, lead, and arsenic), pesticides, indoor and outdoor air pollutants, drinking water contamination and illnesses potentially related to the environment. Inquiries come from the public, the media and the medical community. The inquiries are recorded in the Inquiry module of iHEER.

The Hawaii Childhood Lead Poisoning Prevention Program (HI-CLPPP)

In October 2017, CDC funding revitalized the Hawaii Childhood Lead Poisoning Prevention Program (HI-CLPPP) as a joint program of the HEER office and the Children with Special Health Needs Branch (CSHNB). In FY2022, this funding was renewed for an additional 5 years. HEER hosts a full-time epidemiology specialist for childhood lead activities and provides medical direction and technical assistance from the HEER Toxicologist. Together, the HI-CLPPP team is working to reduce children's exposure to lead by primary prevention outreach and education, improving blood lead level surveillance, advocating for increased blood lead testing, case management, guidelines for health care professionals, lead poisoning education, and linking families to needed services.

HEER and HI-CLPPP have continued to expand their Residential Lead Investigation program which offers free residential lead inspections to families of children with elevated blood lead levels. HEER staff who are Hawaii certified lead risk assessors, have performed over 57 residential lead inspections, helping more than 72 children and their families identify and eliminate home based lead sources.

In October 2021, the CDC revised its reference value for children's blood lead level lowering it from 5 µg/dL to 3.5 µg/dL reflecting the growing understanding that even small amounts of lead are detrimental to children's health and development. HEER and HI-CLPPP have adapted to this new reference level and are now providing public health services to all families of children with blood lead levels above 3.5 µg/dL.

For calendar year 2023, 15,803 children (< 6 years old) were tested for blood lead levels. 222 children had an elevated blood lead level between 3.5-9 µg/dL. Another 25 children had an elevated lead level of >10 µg/dL. Addresses of children with elevated lead levels have been provided to HUD funded programs in the City and County of Honolulu and the neighbor islands to ensure that landlords receiving state or federal rental subsidies comply with lead-based paint requirements.

It remains an on-going concern for HI-CLPPP that less than 30% of Hawaii's keiki are tested for lead. This low testing rate combined with lead poisoning's initially silent nature ensures that many children with lead poisoning are unrecognized and not receiving the services they require to minimize the devastating neurodevelopmental effects of lead poisoning. HI-CLPPP continues to work to raise awareness about childhood lead poisoning and to work with providers and families to increase blood lead testing rates.

Environmentally Related Illness and Injury Reporting and Surveillance (Pesticides and Heavy Metals)

Under the authority of Section 321-311, HRS, Environmentally Related Illness and Injury Surveillance, the HEER Office is required to collect information on Pesticide and Heavy Metal Poisoning. Maven, the electronic surveillance database, receives these results automatically using electronic laboratory reporting (ELR). Using the lab results in Maven, HEER is able to track children and adults with elevated levels of heavy metals including lead, arsenic, cadmium, mercury, and zinc, as well as abnormal markers of pesticide exposure. Tracking these cases allows HEER to analyze the data for geographic and demographic trends and provide individual case management support to doctors and families. HEER staff continues to work with Information Technology Specialists in other sections of DOH to maximize the functionality and efficiency of the Maven system.

The Hawaii State Legislature authorized a new Epidemiology position by Act 49, SLH 2017. The Epidemiologist II was just established in November 2022 and will develop, lead, and conduct epidemiological investigations to identify and investigate environmental health concerns by collecting, analyzing, interpreting, and reporting available health data to evaluate whether public health is being harmed. This epidemiology work will focus on environmental pollutants with an emphasis on assessing disproportionate impacts on vulnerable communities. The HEER Office is awaiting final approvals to recruit this position.

Collaborations on Public Health Education and Outreach

Hawaii Poison Center (HPC) The HPC operates a 24/7 hotline to assist residents and health care providers. DOH receives data from the HPC on the number and types of acute pesticide poisonings. The HPC is mandated by legislation and is under the auspices of the Hawaii State Emergency Medical Services and Injury Prevention System Branch. Annually, the center receives over 9,000 information and poisoning exposure calls from residents and health care providers throughout the state. Services are provided free of charge every day of the year, 24 hours a day by registered nurse specialists, pharmacists, and physicians specially trained in medical toxicology. The center is operated by the Rocky Mountain Poison Center, Denver, Colorado, an accredited regional poison center by the American Association of Poison Control Centers (AAPCC). The HPC provides 24/7 medical advice for management of suspected pesticide exposures and informs DOH on behalf of the providers. This system provides an enhanced and streamlined communication option for the providers. The HEER Toxicologist continues to work with the HPC on industrial, occupational, and environmental poisonings providing local technical support and collaboration.

HEER Guidance and Training

Technical Guidance Manual (TGM) The HEER office updated the primary guidance used to assess health and environmental risk posed by contamination of soil, air and water. The document includes "Environmental Action Levels" (EALs) for over 200 chemicals commonly found at contaminated industrial, residential and agricultural properties. Additional investigation is normally required when concentration of a chemical in soil, water or air exceeds the EAL. Areas of the TGM updated in 2021 include the sections on Decision Unit characterization for sampling and methods for sampling groundwater and surface water. In addition, the entire TGM was moved from an external server managed by a consultant to HEER's internal server, allowing for greater control and more frequent updating of the guidance. Chapters 3, 4 and 5 were updated and consolidated into two titled

SECTION 3 SITE INVESTIGATION DESIGN AND IMPLEMENTATION: OVERVIEW and SECTION 4 SITE INVESTIGATION DESIGN AND IMPLEMENTATION: APPENDICES.

Chinese Academy of Sciences Dr. Roger Brewer, a toxicologist and environmental scientist with the HEER Office continues his collaboration with the Chinese Academy of Sciences. Dr. Brewer has provided expertise and training related to Hawaii's Technical Guidance for the investigation of environmental contamination, including the translation of Hawaii's Technical Guidance into Chinese and expansion of the guidance to assist in the cleanup of heavily contaminated, industrial sites in China. The Chinese edition of the guidance was published as a National Standard for use in China in March 2024. Lessons learned from this collaborative work with environmental experts in China will be used to update and expand HEER Office guidance documents. The English translation of the Hawaii-China guidance was published by a research institute in Australia (crcCARE) in 2024 for use in that country. Dr Brewer and his colleagues with the Chinese Academy of Sciences also used the English version of the document to prepare guidance on testing of contaminated agricultural lands for the United Nations Food and Agriculture Program.

Preliminary Assessment/Site Inspection, and Remediation Cleanup Highlights

Continued Redevelopment of Contaminated Properties

For FY2024, the HEER Office performed its primary mission of discovery and oversight of assessment and cleanup activities on sites across the state, including privately owned, municipal, and state-owned properties and federal military sites. New project managers have been trained and mentored to address the various site work required.

Sites Evaluated for Removal and Remedial Actions

Property owners, responsible parties, and prospective purchasers contact the HEER Office to report releases of hazardous substances, pollutants or contaminants as required by HRS 128D and to assess and manage hazardous substances, pollutants or contamination affecting properties in which they have an interest.

Our general state and federally funded remedial project managers (RPMs) evaluate information provided, review determinations of the nature and extent of contamination and, if necessary, require removal or remedial actions to be taken to protect human health and the environment.

To date, 1937 state sites have been identified and investigated by the section plus 96 consultations, 51 admin sites to track multiple interests, 24 Resource Conservation and Recovery Act (RCRA) lead sites. 795 sites received No Further Action (NFA) determinations. 267 sites received an NFA with Institutional Controls (NFAIC) with long term management with restrictions in place to protect human health and the environment. 371 sites received NFAs having been addressed with no ongoing oversight requirements.

During FY2024, 54 new state sites were added. Two sites were given a no further action letter, both sites requiring ongoing institutional controls to manage residual risks. At the end of FY 2024, 1125 state sites remain open under active oversight and are being remediated or assessed for future action.

SDAR provides regulatory oversight of hazardous substance response actions for Department of

Defense (DOD) service branches under federal CERCLA authorities and HRS 128D. Sites include numerous high priority unexploded ordnance sites (UXO), and multiple diverse military operations, including tank farms, pipelines, industrial activities and active training sites. A DOD cooperative agreement funds DOH oversight of most military sites under EPA CERCLA authority. Investigation and cleanup of petroleum contaminated military sites are exempt under CERCLA and are conducted under HRS 128D authority. Cleanup and DOH oversight for petroleum related activities are also covered under the cooperative funding agreements.

To date, 1131 military sites have been identified and investigated by the SDAR section under the Hawaii State Response Program Defense and State Memorandum of Agreement (DSMOA) Program. 544 sites received NFA determinations. Of these, 398 have Institutional Controls in place to protect human health and the environment. 146 sites have been addressed and have no ongoing oversight requirements.

During Fiscal Year 2024, 36 new sites were added to the DSMOA program. 587 military sites remain open at the end of FY 2024 under active oversight and are being remediated or assessed for future action.

Responsible Party Cooperation

The Hawaii Environmental Response Law, HRS 128D, requires responsible parties and property owners to investigate and clean up contamination under the regulatory oversight of the HEER Office. The HEER Office has the authority to issue orders to require investigation and cleanup of properties that pose an imminent threat to human health or the environment. In instances where there is no responsible party, or the responsible party fails to take action, ERRF funds may be expended to complete cleanup activities to protect human health.

The HEER Office aims to collaborate with responsible parties and property owners in identifying potential hazards and directing potential investigations and cleanup activities. This partnership approach results

in more successful and timely cleanups, while conserving fund monies.

A limited number of cleanup actions were conducted under one of three types of regulatory agreements with the HEER Office, described below.

Voluntary Response Program Key Oversight

The Voluntary Response Program (VRP) encourages voluntary cleanup of contaminated properties and includes a cost recovery mechanism to offset HEER oversight costs. Under Chapter 128D, HRS, DOH has the authority to grant prospective purchasers or developers an exemption from future liability if cleanup is performed to DOH specifications under the program.

Past, current or future property owners can participate in this program, but exemptions from liability can only be given to future purchasers or tenants. Completion of the voluntary cleanup action is accompanied by a Letter of Completion (LOC) issued by the Department of Health and noted on the property deed. An LOC was finalized and will be added to the title for Iwilei Center VRP Site 34, which entered the VRP program in 2019. To date, 36 contaminated properties have been enrolled in the VRP program

Responsible parties with sites participating in the VRP pay the state for DOH oversight of their remedial activities. Sites that have received LOCs where residual contamination is left in place require on-going management. Redevelopment of these sites requires additional coordination and oversight by the HEER Office to ensure compliance with LOC restrictions.

Fast Track Program

The HEER Office Fast Track Cleanup process provides a streamlined approach for property owners to conduct protective, independent cleanups of low and medium priority sites, and improve Hawaii's ability to focus on more serious and complex releases. The program provides expedited oversight initiated with a standardized application for sites with low environmental risks. Forms and information on Fast Track Cleanups (FTC) designed to enable landowners or other private parties to

conduct a voluntary investigation or cleanup under an agreement with the HEER Office are located at: <https://health.hawaii.gov/heer/about-heer/organization/sdar-programs/fast-track-cleanups/>

There are no properties currently in the Fast Track Program.

Preliminary Assessment and Site Inspection Program

Discovery of historically contaminated sites that may pose a threat to current or future users is an important focus area for the HEER Office. HEER uses federal **Preliminary Assessment and Site Inspection grant** funding to locate and sample properties that may have invisible contamination that could cause harm, especially when sites are redeveloped to residential use, or if contaminated soils are excavated and re-used where children could be inadvertently exposed. The HEER Office was awarded a grant of \$245,000 for 2024 by the EPA.

Scope and Data Collection Approaches

Sites are identified by searching historical digital collections that include the Hawaii State Archives, the Hawaii State Public Library System's Hawaii and Pacific Collection, the University of Hawaii at Manoa Library Maps, Aerial Photographs and GIS website and national resources including the Library of Congress Sanborn Map Collection and the Chronicling America digital collection of Hawaii newspapers. These resources, plus locally administered plantation museums in each county provide maps, aerial photos, and oral histories to assist in locating areas formerly used to store, mix and load pesticides for distribution on sugarcane, pineapple and other agricultural industries.

Hawaii's Unique Challenges

As a small, isolated state in the middle of the Pacific, Hawaii faces unique challenges cleaning up contaminated properties. On the mainland, common cleanup solution is often removal and disposal of contaminated materials to a nearby waste facility, or onsite treatment of contamination to reduce or remove hazards.

Unfortunately, limited available land for dedicated disposal facilities and the economics of transporting remedial equipment and waste across the Pacific constrain feasibility of both disposal and treatment options. As a result, Hawaii has relied on risk-based closures and on-site management of contamination for many sites as these are frequently much more feasible alternatives to implement. However, especially in the face of rapid land use changed redevelopment, Hawaii is facing the challenge of how to effectively control and how to keep the engineering and institutional controls in place over long periods and changing uses, and control soil export from those sites. Additionally, in our low-lying coastal regions, future sea level rise has the potential to reduce the effectiveness of engineering and institutional controls and mobilize previously contained environmental hazards.

Refining the Proactive Approach to Contamination State-wide

The biggest challenge we face in the HEER Office is that the majority of recently reported releases are the result of historic industrial and fuel handling activities, and tend to occur most frequently in industrial centers, harbors, airports, pipeline corridors and historic chemical use and storage facilities. Managing sites individually as releases are reported means that HEER often finds out after a problem or release issue has occurred.

In response to these issues, the HEER Office has begun to adopt a broad, proactive strategy to address the discovery, interim management, and remediation of sites statewide. The strategy consists of four components:

1. Programmatic/Areawide Environmental Hazard Management Plans (EHMPs)
2. Extensive Public Outreach, Material Development
3. Site and Document tracking by the public via iHEER

The combination of these three components allows the HEER Office to address potential sites before they become issues by providing the public at-large with as much information and guidance as possible about potential hazards before contamination or

potential contamination is encountered. Our priority is to provide, publicly available information about local and areawide contamination concerns that property owners, tenants, developers and prospective purchasers can use to keep their tenants, contractors and the public safe from contamination exposures on their properties.

Notification and tracking allow the HEER Office to flag sites with known historic contamination entering the redevelopment process before construction starts. This enables early intervention by the HEER Office during the planning process of development rather than having to stop construction that can lead to costly delays. It also prevents unintended exposure of construction workers and the general public.

Lastly, the development of a Construction EHMP (CEHMP) template streamlined information gathering about the proposed project and distills contaminant management to essentials, while prescribing expected minimum hazard management procedures. HEER first published a C-EHMP template and a C-EHMP Addendum in FY2020. The template reduces time and costs in preparation of the document and will more effectively protect human health and the environment by adding minimum handling standards and tracking of companies involved in the project.

This enables HEER to maintain its services to the public. Here is a brief description of the three components:

Programmatic/Areawide Environmental Hazard Management Plans (EHMP)

There are several areas throughout the State that we know have significant contamination being left in place after remedies have been selected and implemented. As the residual contamination may still pose a potential risk to utility and construction workers performing sub-surface maintenance and development activities, guidance has been developed and provided to these entities to protect their workers as they do work in these contaminated areas. This is the primary role of areawide EHMPs and they address areas where 1) the type of contamination is known through several site-specific

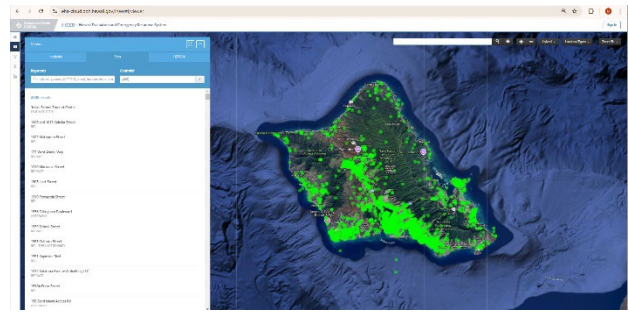

investigations in the area and 2) the contingency plans for handling the type of contamination in question is well defined. By providing information regarding management of the various media (soil, groundwater, soil gas) up front, all entities performing intrusive work in the area will be prepared and equipped to manage any hazard they may encounter. This also provides better worker safety and reduces the number of incidents that our emergency responders must address.

Public Outreach & Material Development

Environmental Hazard Management Plans and other types of institutional controls are only as effective as the amount of awareness affected parties have. Public outreach and continuing education to all relevant parties (utilities, lenders, contractors, State departments, etc.) is required to reinforce what needs to be done and maintain site safety. Meeting with the various stakeholders annually allows the HEER Office to get its safety message out consistently and frequently. HEER Office outreach materials for the various types of contamination (UXO, arsenic, petroleum) on sites are developed and regularly updated keep these important messages fresh in the minds of the public.

Site and Document tracking by the public via iHEER & Notification System Use

iHEER is the HEER Office's site management and document repository system. SDAR sites can be located on a map-based viewer by the public, site information viewed, and many documents directly downloaded. Some restrictions on site viewability and document download apply due to site security or ongoing investigations. iHEER can be accessed via the following link: <https://eha-cloud.doh.hawaii.gov/iheer#!/home>

iHEER viewer with site centroids (green dots)

After Public Record document migration from the previous system, iHEER development focused on the site viewer, grouping, and labeling sites for specific categories. For better site identification site centroids and site boundaries were separated into different layers. Additional layers were added to be able to track site controls such as site-specific EHMPs, Areawide EHMPs, and temporary Construction EHMPs. For internal management, a layer was added to include site-specific features. Site with controls and sites without controls can also be separately viewed.

1,027 Brownfield sites have been tagged and are searchable via a query in the keyword field. Sites affected by an anticipated 3.2 feet of sea-level rises (SLR) and anticipated acute flooding (3.2 feet of SLR plus 1 percent annual chance of flooding) have been tagged and can be queried.

This fiscal year, SDAR staff continued to update site data for individual sites with the addition of site centroids and property boundaries, EHMP boundaries, and site features. All new incoming documents are processed in iHEER now and are directly accessible thereafter. The immediate access to all documents by staff is especially advantageous during allowed teleworking.

Honolulu Rail Transit Project

As drivers along H-1 see every day on their morning commutes, the rail project is becoming a reality. The Honolulu Rail Transit Project (H RTP) guideways are springing up across the landscape and pre-construction activities are occurring all along the route. The HEER Office maintains close regulatory

oversight of the H RTP to ensure any contamination encountered during construction is managed safely, efficiently and in accordance with state law.

The H RTP includes construction of 21 rail stations, installation of hundreds of columns to support 20 miles of elevated guideways, extensive utility relocations, a large rail car maintenance and storage facility, and several park and rides.

During FY2024, guideway construction accelerated in the industrialized area near the airport, and preconstruction activities associated with utility relocation continued throughout the City Center part of the project. Both the Airport and City Center Guideway Areas are located within densely populated regions of Oahu in areas with much higher potential for contamination than the western segments. HDOH is particularly concerned with an area along Dillingham where Honolulu Authority for Rapid Transportation (HART) contractors encountered very high volatile concentrations during geotechnical boring several years ago. The Dillingham section rail alignment has been shifted to the mauka side of the Dillingham, due to the hazards and density of utilities buried under the roadway.

To address environmental concerns in accordance with the Programmatic EHE-EHMP, oversight of the H RTP continues to require close coordination between the HEER Office SDAR Section and multiple other regulatory authorities. During FY2024, the SDAR Section worked closely with the Solid and Hazardous Waste Branch (SHWB), the Clean Water Branch (CAB), and the HEER Office's EP&R Section on the H RTP.

Unexploded Ordnance (UXO) Issues Throughout the State

UXO continues to be one of the main contaminants of concern throughout the State. Over the past two decades, dozens of UXO investigations have taken place throughout the State at both active military installations and Formerly Used Defense Sites (FUDS), highlighting the number and severity of the UXO problem. Many of the areas that have been and are currently being investigated are in or near residential areas (Waimea/Kamuela, Waikoloa Village, Maku'u/Popoki) and/or in areas heavily

trafficked by the public (Maunawili Trail, Hapuna Beach, Bellows Air Force Base, Molokini, 'Ahihi Kina'u, etc.). Since there is no way to ensure 100% clearance of a UXO site, these sites present a potential danger to the public at-large. The HEER Office has continued to work with DOD counterparts to address UXO concerns and inform the public of hazards.

DOH issued an unconditional NFA for the 11,000 acre DHHL property at Puu Kapu and a conditional NFA for the 140 acre DHHL Lalamilo property in the Waikoloa Maneuver Area. DOH continues to work with the Waikoloa Working Group (HUD, DHHL, County of Hawaii, Army Corps of Engineers) toward NFAs in other properties within the Waikoloa Maneuver Area.

The HEER Office is participating in outreach with the United States Army Corps of Engineers (USACE) to discuss UXO safety with the public.

Brownfields Re-development of Various Properties Across the State and Counties

Land re-use and re-development is critical when living on an island and to facilitate that, the HEER Office has dedicated its time and resources to assist private parties in their endeavors. In addition to these projects, the HEER Office has assisted the City and County of Honolulu in researching potential parcels for use as transitional housing.

The HEER Office has had a longstanding relationship with DBEDT and continues to assist DHHL, DOT, DOE, and other State departments in providing guidance and oversight for their projects. The Brownfields grant funding will support efforts to assess and clean-up contaminated and abandoned industrial and commercial properties. In the last year the HEER Office has worked closely with the City and County of Honolulu to discuss their redevelopment plans for the Iwilei District which is anticipated to rely on Brownfields funding support.

High Priority State Sites

A key role of the HEER Office is to identify sites where current or projected exposures to hazardous

chemicals could pose a threat to public health or the environment. These sites receive high priority designations. Examples of progress on high priority sites are described below:

Kapalama Container Yard Development

The Kapalama Container Yard project is a massive re-development project on both land and sea. The area was utilized by multiple and various tenants after it was transferred to the State from the Army in 1983 when it was known as the Kapalama Military Reservation. Historic information regarding the former military reservation indicated petroleum, heavy metal, and PCB contamination on-site. An investigation was performed prior to construction and an EHMP was implemented on the site. Given the vast amount of soil and concrete that needs to be moved or disposed of, the HEER Office has worked closely with DOT's contractor Kiewit and the Solid Waste Section to ensure that the material being generated is being handled in accordance with state regulations.

During this fiscal year, a Soil Stockpile Characterization and Reuse Request was submitted and weekly monitoring continues.

Iwilei Areawide Contamination

Because of extensive historic petroleum contamination in subsurface soils dating back to territorial days, Honolulu Harbor remains one of HEER's top priorities. The HEER office is interested in the effects of rising water levels which may be exacerbated in the future with sea-level rise. Increase and severity of flooding, sea-level rise, and storm events is expected to rise in the future as a result of climate change. The HEER would like to understand

the magnitude and distribution of this problem at identified problematic areas including active petroleum fuel terminals, areas of previous pipelines, and historic petroleum handling and storage facilities.

BHP GASCO Benzene Site/Dole Cannery Building Site, Oahu

The BHP Gasco Site was the most hazardous site in the State with high benzene concentrations in soil and groundwater as a result of releases from former gas manufacturing activities. The site is situated next to the Dole Cannery Building and is being remediated under a consent agreement signed in March 2004. The BHP Gasco Site has completed active remediation and source reduction and has been re-developed into a warehouse. Engineering and institutional controls have been implemented and the site together with the neighboring Dole Cannery Building is currently under a combined long-term monitoring program for groundwater, soil vapor, and indoor air monitoring following the construction of a warehouse underlain by an impermeable vapor barrier and a sub-slab ventilation system. Semi-annual monitoring is being conducted but the Environmental Hazard Management Plan is undergoing revision.

Given changing ocean and atmospheric conditions due to climate change and sea level rise, long-term monitoring measurements to understand temporal changes are needed.

HEER works to stay up to date on changing environmental hazards, and adjusts remedies when data show new risks to human health and the environment are present.

Sites Eligible for Possible Listing Under CERCLA

Three Hawaii sites are listed on the [EPA National Priority List \(NPL\)](#). Costs for site investigation and cleanup are being borne by the responsible parties. The state is not obligated to contribute to cleanup or future operation and maintenance costs.

The EPA’s Superfund Website [SEMS Search](#) lists 247 sites in Hawaii.

Twenty-five are on the National Priority List (NPL) as Final NPL (the 3 listed above), Part of NPL Site (14), Deleted NPL (1) or removed from NPL (7). One hundred forty-eight (148) are NFRAP-Site does not qualify for the NPL based on existing information.

The remaining 62 non-NPL are listed as Active and fall into 12 categories plus 3 blank categories:

- 1 Addressed as Part of Another non-NPL Site
- 3 Deferred to RCRA (Subtitle C)
- 4 Fed Fac Site Inspection Review Start Needed (Federal Facilities)
- 10 Other Cleanup Activity: Federal Facility-Lead Cleanup (Federal Facilities)
- 1 Fed Fac Preliminary Assessment Review Ongoing (Federal Facilities)
- 6 Fed Fac Preliminary Assessment Review Start Needed (Federal Facilities)
- 7 PA Start Needed
- 1 Site Reassessment Start Needed
- 24 Removal Only Site (No Site Assessment Work Needed) (one is a Federal Facility)
- 1 Referred to Removal - Needs Further Remedial
- 1 Status Not Specified
- 3 Blank

The tables below indicate the ID of the [iHEER](#) record(s) corresponding to the federal record.

The Hawaii Response Program (HSRP) – List of Priority Sites

Chapter 128D, HRS, Environmental Response Law, Section 7, HRS mandates that a State List of Sites be published annually listing the sites with potential or known hazardous substances or pollutants or contaminants. Overall, in FY2024, HEER had oversight responsibilities for 1,125 active sites and reached No Further Action (NFA) determinations at 3 sites.

We present the list in two sections.

The Hawaii State Response Program List of Priority Sites presents all non-military Hawaii sites identified for potential or known non-emergency response actions under HRS 128D. Current ERRF funding supports only part of the HEER Office response obligation for these sites. 1,125 active sites under direct DOH oversight in the various State programs are listed. Three state sites with known or suspected contamination received No Further Action Determinations, one is a partial NFA for one of the lots at the site, the other two will require ongoing management of residual contamination through Environmental Hazard Management Plans.

The Hawaii State Response Program DSMOA Program List of Priority Sites presents military sites in Hawaii for which SDAR provides oversight. Hazardous substance response actions are managed by various DOD branches under CERCLA authorities, with regulatory oversight from SDAR. Cleanup sites within the Pearl Harbor Naval Complex are co-regulated by US EPA, due to the National Priorities List (“Superfund”) designation. The DOD sites include numerous high priority unexploded ordnance sites (UXO). Investigations and cleanups of military sites with petroleum-contaminated sites are conducted under 128D authorities, as petroleum is not covered under CERCLA. ERRF funds are not currently used for oversight of non-emergency military cleanups in Hawaii. Staff positions providing oversight for this work are currently funded by federal DSMOA grants. The list includes 587 sites that are co-managed by DOH and DOD under CERCLA and HRS 128D authorities.

Because the Air Force and Navy work systematically to address high priority sites first, the majority of the remaining sites are medium and low priority. In 2024, 2 clean up decisions (1 NFA and 1 NFA w/ ICs) were reached at DSMOA sites. Some sites will require

ongoing management of residual contamination through Environmental Hazard Management Plans. The lists are sorted in the order of Island, Locality or Installation, and Site Name. See iHEER for further information.

The Status of Site Discovery indicates that limited sampling targeting a specific type of hazard is being done or has been done.

A Status of Assessment indicates sites that have sampling planned or underway and the hazard has not yet been determined.

A Status of Remedy Needed, Remedy Selected, Remedy in Place, or NFAIC indicates that a site has been categorized as a potential hazard as sampling data indicate that contaminant concentrations exceed Hawaii Environmental Action Levels and use restrictions need to be imposed to limit access to the contamination (Institutional Controls) that may include physical barriers that limit exposure to the contaminants (Engineering Controls).

A Status of NFA indicates that hazards have been managed by removal or destruction of the contaminants.

Generally, the Hawaii Environmental Action Levels (EALs) are conservative levels set to be protective of long term, daily exposures.

FY2024 Response Program Activity

Response Program Activity Summary data presented in this section for the Hawaii State Response Program (SRP) includes all Hawaii sites identified for non-emergency response actions during FY2024 and sites requiring evaluation if an assessment or response action is required under HEER Office authority. The HEER Office manages sites within several program areas depending upon eligibility, funding, and level of responsible party participation as:

- State Sites (General Funded)
- SRP (State Response Program) (Federally funded)
- Hawaii Brownfields Revitalization Sites (Brownfields)
- Hawaii Voluntary Response Program (VRP) Sites (Federally funded)
- Site Discovery (SDAR) and Preliminary Assessment/Site Inspection (PA/SI) Sites (Federally funded)
- Fast Track
- EPA or National Priority List (NPL)
- TSCA (Toxic Substances Control Act PCB cleanup)

- DSMOA Department of Defense Sites

Over time, a site may be managed within the HEER Office under one or more program areas, starting with the site assessment phase and if required by the State, through to cleanup completion. Counts are sites that are open.

Program Category	Count
State	900
SRP	77
VRP	6
Site Discovery & PA/SI	137
Fast Track	2
EPA	2
TSCA	1
DSMOA	587

Site specific information on our state and federal sites are publicly available on iHEER. Please read the instructions and limitations before using iHEER.
